THEMES IN
INDIAN HISTORY
PART II

CONTENTS

PART I

Women and men have travelled in search of work, to escape from natural disasters, as traders, merchants, soldiers, priests, pilgrims, or driven by a sense of adventure. Those who visit or come to stay in a new land invariably encounter a world that is different in terms of the landscape or physical environment as well as customs, languages, beliefs and practices of people. Many of them try to adapt to these differences, others, somewhat exceptional, note these carefully in accounts, generally recording what they find unusual or remarkable. Unfortunately, we have practically no accounts of travel left by women, though we know that they travelled.

The accounts that survive are often varied in terms of their subject matter. Some deal with affairs of the court, while others are mainly focused on religious issues, or architectural features and monuments. For example, one of the most important descriptions of the city of Vijayanagara (Chapter 7) in the fifteenth century comes from Abdur Razzaq Samarqandi, a diplomat who came visiting from Herat.

In a few cases, travellers did not go to distant lands. For example, in the Mughal Empire (Chapters 8 and 9), administrators sometimes travelled within the empire and recorded their observations. Some of them were interested in looking at popular customs and the folklore and traditions of their own land.

In this chapter we shall see how our knowledge of the past can be enriched through a consideration of descriptions of social life provided by travellers who visited the subcontinent, focusing on the accounts of three men: Al-Biruni who came from Uzbekistan (eleventh century), Ibn Battuta who came from Morocco, in northwestern Africa (fourteenth century) and the Frenchman François Bernier (seventeenth century).

Source 1

Al-Biruni's objectives

Al-Biruni described his project as a help to those who want to discuss religious questions with them (the Hindus), and as a repertory of information to those who want to associate with them.

> Read the excerpt from Al-Biruni (Source 5) and discuss whether his work met these objectives.

Translating texts, sharing ideas

Al-Biruni's expertise in several languages allowed him to compare languages and translate texts. He translated several Sanskrit works, including Patanjali's work on grammar, into Arabic. For his Brahmana friends, he translated the works of Euclid, a Greek mathematician, into Sanskrit.

As these authors came from vastly different social and cultural environments, they were often more attentive to everyday activities and practices which were taken for granted by indigenous writers, for whom these were routine matters, not worthy of being recorded. It is this difference in perspective that makes the accounts of travellers interesting. Why did these travellers write so? As we will see, the answers vary from one instance to the next.

1. AL-BIRUNI AND THE *KITAB-UL-HIND*

1.1 From Khwarizm to the Punjab

Al-Biruni was born in 973, in Khwarizm in present-day Uzbekistan. Khwarizm was an important centre of learning, and Al-Biruni received the best education available at the time. He was well versed in several languages: Syriac, Arabic, Persian, Hebrew and Sanskrit. Although he did not know Greek, he was familiar with the works of Plato and other Greek philosophers, having read them in Arabic translations. In 1017, when Sultan Mahmud invaded Khwarizm, he took several scholars and poets back to his capital, Ghazni. Al-Biruni was one of them. He arrived in Ghazni as a hostage, but gradually developed a liking for the city, where he spent the rest of his life until his death at the age of 70.

It was in Ghazni that Al-Biruni developed an interest in India. This was not unusual. Sanskrit works on astronomy, mathematics and medicine had been translated into Arabic from the eighth century onwards. When the Punjab became a part of the Ghaznavid empire, contacts with the local population helped create an environment of mutual trust and understanding. Al-Biruni spent years in the company of Brahmana priests and scholars, learning Sanskrit, and studying religious and philosophical texts. While his itinerary is not clear, it is likely that he travelled widely in the Punjab and parts of northern India.

Travel literature was already an accepted part of Arabic literature by the time he wrote. This literature dealt with lands as far apart as the Sahara desert in the west to the River Volga in the north. So, while

few people in India would have read Al-Biruni before 1500; many others outside India may have done so.

1.2 The *Kitab-ul-Hind*

Al-Biruni's *Kitab-ul-Hind*, written in Arabic, is simple and lucid. It is a voluminous text, divided into 80 chapters on subjects such as religion and philosophy, festivals, astronomy, alchemy, manners and customs, social life, weights and measures, iconography, laws and metrology.

Generally (though not always), Al-Biruni adopted a distinctive structure in each chapter, beginning with a question, following this up with a description based on Sanskritic traditions, and concluding with a comparison with other cultures. Some present-day scholars have argued that this almost geometric structure, remarkable for its precision and predictability, owed much to his mathematical orientation.

Al-Biruni, who wrote in Arabic, probably intended his work for peoples living along the frontiers of the subcontinent. He was familiar with translations and adaptations of Sanskrit, Pali and Prakrit texts into Arabic – these ranged from fables to works on astronomy and medicine. However, he was also critical about the ways in which these texts were written, and clearly wanted to improve on them.

Hindu

The term "Hindu" was derived from an Old Persian word, used c. sixth-fifth centuries BCE, to refer to the region east of the river Sindhu (Indus). The Arabs continued the Persian usage and called this region "al-Hind" and its people "Hindi". Later the Turks referred to the people east of the Indus as "Hindu", their land as "Hindustan", and their language as "Hindavi". None of these expressions indicated the religious identity of the people. It was much later that the term developed religious connotations.

Discuss...

If Al-Biruni lived in the twenty-first century, which are the areas of the world where he could have been easily understood, if he still knew the same languages?

Fig. 5.2
An illustration from a thirteenth-century Arabic manuscript showing the Athenian statesman and poet Solon, who lived in the sixth century BCE, addressing his students. Notice the clothes they are shown in.

Are these clothes Greek or Arabian?

The bird leaves its nest

These are excerpts from the Rihla:

My departure from Tangier, my birthplace, took place on Thursday ... I set out alone, having neither fellow-traveller ... nor caravan whose party I might join, but swayed by an overmastering impulse within me and a desire long-cherished in my bosom to visit these illustrious sanctuaries. So I braced my resolution to quit all my dear ones, female and male, and forsook my home as birds forsake their nests.

My age at that time was twenty-two years.

Ibn Battuta returned home in 1354, about 30 years after he had set out.

❖ How can you distinguish the travellers from the robbers?

2. IBN BATTUTA'S RIHLA

2.1 An early globe-trotter

Ibn Battuta's book of travels, called Rihla, written in Arabic, provides extremely rich and interesting details about the social and cultural life in the subcontinent in the fourteenth century. This Moroccan traveller was born in Tangier into one of the most respectable and educated families known for their expertise in Islamic religious law or shari'a. True to the tradition of his family, Ibn Battuta received literary and scholastic education when he was quite young.

Unlike most other members of his class, Ibn Battuta considered experience gained through travels to be a more important source of knowledge than books. He just loved travelling, and went to far-off places, exploring new worlds and peoples. Before he set off for India in 1332-33, he had made pilgrimage trips to Mecca, and had already travelled extensively in Syria, Iraq, Persia, Yemen, Oman and a few trading ports on the coast of East Africa.

Travelling overland through Central Asia, Ibn Battuta reached Sind in 1333. He had heard about Muhammad bin Tughlaq, the Sultan of Delhi, and lured by his reputation as a generous patron of arts and letters, set off for Delhi, passing through Multan and Uch. The Sultan was impressed by his scholarship, and appointed him the qazi or judge of Delhi. He remained in that position for several years, until he fell out of favour and was thrown into prison. Once the misunderstanding between him and the Sultan was cleared, he was restored to imperial service, and was ordered in 1342 to proceed to China as the Sultan's envoy to the Mongol ruler.

With the new assignment, Ibn Battuta proceeded to the Malabar coast through central India. From Malabar he went to the Maldives, where he stayed for eighteen months as the qazi, but eventually decided to proceed to Sri Lanka. He then went back once more to the Malabar coast and the Maldives, and before resuming his mission to China, visited Bengal and Assam as well. He took a ship to Sumatra, and from there another ship for the Chinese port town of

Fig. 5.4
A boat carrying passengers,

a temple in Bengal
(seventeenth-eighteenth centuries)

Zaytun (now known as Quanzhou). He travelled extensively in China, going as far as Beijing, but did not stay for long, deciding to return home in 1347. His account is often compared with that of Marco Polo, who visited China (and also India) from his home base in Venice in the late thirteenth century.

Ibn Battuta meticulously recorded his observations about new cultures, peoples, beliefs, values, etc. We need to bear in mind that this globe-trotter was travelling in the fourteenth century, when it was much more arduous and hazardous to travel than it is today. According to Ibn Battuta, it took forty days to travel from Multan to Delhi and about fifty days from Sind to Delhi. The distance from Daulatabad to Delhi was covered in forty days, while that from Gwalior to Delhi took ten days.

Why do you think some of the passengers are carrying arms?

The lonely traveller

Robbers were not the sole hazard of long journeys; the traveller could feel homesick or fall ill. Here is an excerpt from the *Rihla*:

I was attacked by the fever, and I actually tied myself on the saddle with a turban-cloth in case I should fall off by reason of my weakness ... So at last we reached the town of Tunis, and the townsfolk came out to welcome the shaikh ... and the son of the qazi ... On all sides they came forward with greetings and questions to one another, but not a soul said a word of greeting to me, since there was none of them I knew. I felt so sad at heart on account of my loneliness that I could not restrain the tears that started to my eyes, and wept bitterly. But one of the pilgrims, realising the cause of my distress, came up to me with a greeting ...

Map 1
Places visited by Ibn Battuta in Afghanistan, Sind and Punjab. Many of the place-names have been spelt as Ibn Battuta would have known them.

> ✪ Use the scale on the map to calculate the distance in miles between Multan and Delhi.

Travelling was also more insecure: Ibn Battuta was attacked by bands of robbery several times. In fact he preferred travelling in a caravan along with companions, but this did not deter highway robbers. While travelling from Multan to Delhi, for instance, his caravan was attacked and many of his fellow travellers lost their lives; those travellers who survived, including Ibn Battuta, were severely wounded.

2.2 The 'enjoyment of curiosities'

As we have seen, Ibn Battuta was an inveterate traveller who spent several years travelling through north Africa, West Asia and parts of Central Asia (he may even have visited Russia), the Indian subcontinent and China, before returning to his native land, Morocco. When he returned, the local ruler issued instructions that his stories be recorded.

Source 3

Education and entertainment

This is what Ibn Juzayy who was deputed to know what Ibn Battuta dictated, said in his introduction:

A gracious direction was transmitted [by the ruler] that Ibn Battuta should dictate an account of the cities which he had seen in his travel, and of the interesting events which had clung to his memory and that he should speak of those whom he had met of the rulers of countries, of their distinguished men of learning and their pious saints. Accordingly, he dictated upon these subjects a narrative which gave entertainment to the mind and delight to the ears and eyes, with a variety of curious particulars by the exposition of which he gave edification and of marvellous things by referring to which he aroused interest.

In the footsteps of Ibn Battuta

In the centuries between 1400 and 1800 visitors to India wrote a number of travelogues in Persian. At the same time, Indian visitors to Central Asia, Iran and the Ottoman empire also sometimes wrote about their experiences. These writers followed in the footsteps of Al-Biruni and Ibn Battuta, and had sometimes read these earlier authors.

Among the best known of these writers were Abdur Razzaq Samarqandi, who visited south India in the 1440s, Mahmud Wali Balkhi, who travelled very widely in the 1620s, and Shaikh Ali Hazin, who came to north India in the 1740s. Some of these authors were fascinated by India, and one of them – Mahmud Balkhi – even became a sort of sanyasi for a time. Others such as Hazin were disappointed and even disgusted with India, where they expected to receive a red-carpet treatment. Most of them saw India as a land of wonders.

Fig. 5.6
A seventeenth-century painting depicting Bernier in European clothes

3. FRANÇOIS BERNIER
A DOCTOR WITH A DIFFERENCE

Once the Portuguese arrived in India in about 1500, a number of them wrote detailed accounts regarding Indian social customs and religious practices. A few of them, such as the Jesuit Roberto Nobili, even translated Indian texts into European languages.

Among the best known of the Portuguese writers is Duarte Barbosa, who wrote a detailed account of trade and society in south India. Later, after 1600, we find growing numbers of Dutch, English and French travellers coming to India. One of the most famous was the French jeweller Jean-Baptiste Tavernier, who travelled to India at least six times. He was particularly fascinated with the trading conditions in India, and compared India to Iran and the Ottoman empire. Some of these travellers, like the Italian doctor Manucci, never returned to Europe, and settled down in India.

François Bernier, a Frenchman, was a doctor, political philosopher and historian. Like many others, he came to the Mughal Empire in search of opportunities. He was in India for twelve years, from 1656 to 1668, and was closely associated with the Mughal court, as a physician to Prince Dara Shukoh, the eldest son of Emperor Shah Jahan, and later as an intellectual and scientist, with Danishmand Khan, an Armenian noble at the Mughal court.

3.1 Comparing "East" and "West"

Bernier travelled to several parts of the country, and wrote accounts of what he saw, frequently comparing what he saw in India with the situation in Europe. He dedicated his major writing to Louis XIV, the king of France, and many of his other works were written in the form of letters to influential officials and ministers. In virtually every instance Bernier described what he saw in India as a bleak situation in comparison to developments in Europe. As we will see, this assessment was not always accurate. However, when his works were published, Bernier's writings became extremely popular.

Fig. 5.7
A painting depicting Tavernier in Indian costume

Source 4

Travelling with the Mughal army

Bernier often travelled with the army. This is an excerpt from his description of the army's march to Kashmir:

I am engaged to keep two good Turkoman horses, and I also take with me a powerful Persian camel and driver, a groom for my horses, a cook and a servant to go before my horse with a flask of water in his hand, according to the custom of the country. I am also provided with every useful article, such as a tent of moderate size, a carpet, a portable bed made of four very strong but light canes, a pillow, a mattress round leather table-cloths used in India some fine regions of dyed cloth, three small bags with culinary utensils which are all placed in a large bag, and this bag again carried in a very capacious and strong double sack or net made of leather thongs. This double sack likewise contains the provisions, linen and wearing apparel, both of master and servant. I have taken care to lay in a stock of excellent rice for five or six days' consumption, of sweet biscuits flavoured with anise (a herb), of limes and sugar. Nor have I forgotten a linen bag with its small iron hook for the purpose of suspending and draining dahi, or curds; nothing being considered so refreshing in this country as lemonade and dahi.

> ◯ What are the things from Bernier's list that you would take on a journey today?

The creation and circulation of ideas about India

The writings of European travellers helped produce an image of India for Europeans through the printing and circulation of their books. Later, after 1750, when Indians like Sheikh Itesamuddin and Mirza Abu Talib visited Europe and confronted this image that Europeans had of their society, they tried to influence it by producing their own version of matters.

Bernier's works were published in France in 1670-71 and translated into English, Dutch, German and Italian within the next five years. Between 1670 and 1725 his account was reprinted eight times in French, and by 1684 it had been reprinted three times in English. This was in marked contrast to the accounts in Arabic and Persian, which circulated as manuscripts and were generally not published before 1800.

⟳ DISCUSS...

4. MAKING SENSE OF AN ALIEN WORLD AL-BIRUNI AND THE SANSKRITIC TRADITION

4.1 Overcoming barriers to understanding

As we have seen, travellers often compared what they saw in the subcontinent with practices with which they were familiar. Each traveller adopted distinct strategies to understand what they observed. Al-Biruni, for instance, was aware of the problems inherent in the task he had set himself. He discussed several "barriers" that he felt obstructed understanding. The first amongst these was language. According to him, Sanskrit was so different from Arabic and Persian that ideas and concepts could not be easily translated from one language into another.

The second barrier he identified was the difference in religious beliefs and practices. The self-absorption and consequent insularity of the local population according to him, constituted the third barrier. What is interesting is that even though he was aware of these problems, Al-Biruni depended almost exclusively on the works of Brahmanas, often citing passages from the Vedas, the Puranas, the *Bhagavad Gita*, the works of Patanjali, the *Manusmriti*, etc., to provide an understanding of Indian society.

4.2 Al-Biruni's description of the caste system

Al-Biruni tried to explain the caste system by looking for parallels in other societies. He noted that in ancient Persia, four social categories were recognised: those of knights and princes; monks, fire-priests and lawyers; physicians, astronomers and other scientists; and finally, peasants and artisans. In other words, he attempted to suggest that social divisions were not unique to India. At the same time he pointed out that within Islam all men were considered equal, differing only in their observance of piety.

In spite of his acceptance of the Brahmanical description of the caste system, Al-Biruni disapproved of the notion of pollution. He remarked that everything which falls into a state of impurity strives and succeeds in regaining its original condition of purity. The sun cleanses the air, and the salt in the sea prevents the water from becoming polluted. If it

were not so, insisted Al-Biruni, life on earth would have been impossible. The conception of social pollution, intrinsic to the caste system, was according to him, contrary to the laws of nature.

Source 3

The system of varna

This is Al-Biruni's account of the system of varna:

The highest caste are the Brahmana, of whom the books of the Hindus tell us that they were created from the head of Brahman. And as the Brahman is only another name for the force called nature, and the head is the highest part of the … body, the Brahmana are the choicest part of the whole genus. Therefore the Hindus consider them as the very best of mankind.

The next caste are the Kshatriya, who were created, as they say, from the shoulders and hands of Brahman. Their degree is not much below that of the Brahmana.

After them follow the Vaishya, who were created from the thigh of Brahman.

The Shudra, who were created from his feet.

Between the latter two classes there is no very great distance. Much, however, as these classes differ from each other, they live together in the same towns and villages, mixed together in the same houses and lodgings.

☞ Compare what Al-Biruni wrote with Source 6, Chapter 3. Do you notice any similarities and differences? Do you think Al-Biruni depended only on Sanskrit texts for his information and understanding of Indian society?

As we have seen, Al-Biruni's description of the caste system was deeply influenced by his study of normative Sanskrit texts which laid down the rules governing the system from the point of view of the Brahmanas. However, in real life the system was not quite so rigid. For instance, the categories defined as *antyaja* (literally, born outside the system) were often expected to provide inexpensive labour to both peasants and zamindars (see also Chapter 8). In other words, while they were often subjected to social oppression, they were included within economic networks.

🗩 DISCUSS…
How important is knowledge of the language of the area for a traveller from a different region?

5. IBN BATTUTA AND THE EXCITEMENT OF THE UNFAMILIAR

By the time Ibn Battuta arrived in Delhi in the fourteenth century, the subcontinent was part of a global network of communication that stretched from China in the east to north-west Africa and Europe in the west. As we have seen, Ibn Battuta himself travelled extensively through these lands, visiting sacred shrines, spending time with learned men and rulers, often officiating as qazi, and enjoying the cosmopolitan culture of urban centres where people who spoke Arabic, Persian, Turkish and other languages, shared ideas, information and anecdotes. These included stories about men noted for their piety, kings who could be both cruel and generous, and about the lives of ordinary men and women; anything that was unfamiliar was particularly highlighted in order to ensure that the listener or the reader was suitably impressed by accounts of distant yet accessible worlds.

5.1 The coconut and the paan

Some of the best examples of Ibn Battuta's strategies of representation are evident in the ways in which he described the coconut and the paan, two kinds of plant produce that were completely unfamiliar to his audience.

Source 2

The paan

Read Ibn Battuta's description of the paan:

The betel is a tree which is cultivated in the same manner as the grape-vine ... The betel has no fruit and is grown only for the sake of its leaves ... The manner of its use is that before eating it one takes areca nut; this is like a nutmeg but is broken up until it is reduced to small pellets, and one places these in his mouth and chews them. Then he takes the leaves of betel, puts a little chalk on them, and masticates them along with the betel.

> Why do you think this attracted Ibn Battuta's attention? Is there anything you would like to add to this description?

Source 1

Nuts like a man's head

The following is how Ibn Battuta described the coconut:

These trees are among the most peculiar trees in kind and most astonishing in habit. They look exactly like date-palms, without any difference between them except that the one produces nuts as its fruits and the other produces dates. The nut of a coconut tree resembles a man's head, for in it are what look like two eyes and a mouth, and the inside of it when it is green looks like the brain, and attached to it is a fibre which looks like hair. They make from this cords with which they sew up ships instead of using iron nails, and they [also] make from it cables for vessels.

> What are the comparisons that Ibn Battuta makes to give his readers an idea about what coconuts looked like? Do you think these are appropriate? How does he convey a sense that this fruit is unusual? How accurate is his description?

5.2 Ibn Battuta and Indian cities

Ibn Battuta found cities in the subcontinent full of exciting opportunities for those who had the necessary drive, resources and skills. They were densely populated and prosperous, except for the occasional disruptions caused by wars and invasions. It appears from Ibn Battuta's account that most cities had crowded streets and bright and colourful markets that were stacked with a wide variety of goods. Ibn Battuta described Delhi as a vast city, with a great population, the largest in India. Daulatabad (in Maharashtra) was no less, and easily rivalled Delhi in size.

Source 5

Dehli

Here is an excerpt from Ibn Battuta's account of Dehli, often spelt as Dehli in texts of the period.

The city of Dehli covers a wide area and has a large population ... The rampart round the city is without parallel. The breadth of its wall is eleven cubits; and inside it are houses for the night sentry and gatekeepers. Inside the ramparts there are storehouses for storing edibles, magazines, ammunition, ballistas and siege machines. The grains that are stored in these magazines can last for a long time, without rotting.

... In the interior of the rampart, horsemen as well as infantrymen move from one end of the city to another. The rampart is pierced through by windows which open on the side of the city, and it is through these windows that light enters inside. The lower part of the rampart is built of stone; the upper part of bricks. It has many towers close to one another. There are many eight gates of this city, which are called darwaza; and of these, the Budaun darwaza is the greatest; inside the Mandvi darwaza there is a grain market; adjacent to the Gul darwaza there is an orchard ... In (the city of Dehli) has a fine cemetery in which graves have domes over them, and those that do not have a dome have an arch for sure. In the cemetery they sow flowers such as tuberose, jasmine, wild rose, etc. and flowers blossom there in all seasons.
*Fig. 5.4 (top)
An arch in Tughlaqabad, Delhi*

*Fig. 5.5 (left)
Part of the fortress wall of the structure*
Fig. 5.10
Ikat weaving patterns such as this were adapted and modified in several textile production centres in the subcontinent and in Southeast Asia.

❖ Why do you think Ibn Battuta highlighted these activities in his description?

The bazaars were not only places of economic transactions, but also the hub of social and cultural activities. Most bazaars had a mosque and a temple, and in some of them at least, spaces were marked for public performances by dancers, musicians and singers.

While Ibn Battuta was not particularly concerned with explaining the prosperity of towns, historians have used his account to suggest that towns derived a significant portion of their wealth through the appropriation of surplus from villages. Ibn Battuta found Indian agriculture very productive because of the fertility of the soil, which allowed farmers to cultivate two crops a year. He also noted that the subcontinent was well integrated with inter-Asian networks of trade and commerce, with Indian manufactures being in great demand in both West Asia and Southeast Asia, fetching huge profits for artisans and merchants. Indian textiles, particularly cotton cloth, fine muslins, silks, brocade and satin, were in great demand. Ibn Battuta informs us that certain varieties of fine muslin were so expensive that they could be worn only by the nobles and the very rich.

Source 9

Music in the market

Read Ibn Battuta's description of Daulatabad:

In Daulatabad there is a market place for male and female singers, which is known as Tarababad. It is one of the greatest and most beautiful bazaars. It has numerous shops and every shop has a door which leads into the house of the owner ... The shops are decorated with carpets and at the centre of a shop there is a swing on which sits the female singer. She is decked with all kinds of finery and her female attendants swing her. In the middle of the market place there stands a large cupola, which is carpeted and decorated and in which the chief of the musicians takes his place ... on Thursday after the dawn prayers accompanied by his servants and slaves. The female singers come in successive crowds, sing before him and dance until dusk after which he withdraws. In this bazaar there are mosques for offering prayers ... One of the Hindu rulers ... alighted at the cupola every time he passed by this market place, and the female singers would sing before him. Even some Muslim rulers did the same.

5.3 A unique system of communication

The state evidently took special measures to encourage merchants. Almost all trade routes were well supplied with inns and guest houses. Ibn Battuta was also amazed by the efficiency of the postal system which allowed merchants to not only send information and remit credit across long distances, but also to dispatch goods required at short notice. The postal system was so efficient that while it took fifty days to reach Delhi from Sind, the news reports of spies would reach the Sultan through the postal system in just five days.

Source 10

On horse and on foot

This is how Ibn Battuta describes the postal system:

In India the postal system is of two kinds. The horse-post, called *uluq*, is run by royal horses stationed at a distance of every four miles. The foot-post has three stations per mile; it is called *dawa*, that is one-third of a mile ... Now, at every third of a mile there is a well-populated village, outside which are three pavilions in which sit men with girded loins ready to start. Each of them carries a rod, two cubits in length, with copper bells at the top. When the courier starts from the city he holds the letter in one hand and the rod with the bells in the other; and he runs as fast as he can. When the men in the pavilions hear the ringing of the bell they get ready. As soon as the courier reaches them, one of them takes the letter from his hand and runs at top speed shaking the rod all the while until he reaches the next *dawa*. And the same process continues till the letter reaches its destination. This foot-post is quicker than the horse-post, and often it is used to transport the fruits of Khurasan which are much desired in India.

➤ Do you think the foot-post system could have operated throughout the subcontinent?

A strange nation?

The travelogue of Abdur Razzaq written in the 1440s is an interesting mixture of emotions and perceptions. On the one hand, he did not appreciate what he saw in the port of Calicut (present-day Kozhikode) in Kerala, which was populated by "a people the likes of whom I had never imagined", describing them as "a strange nation".

Later in his visit to India, he arrived in Mangalore and crossed the Western Ghats. Here he saw a temple that filled him with admiration:

Within three leagues (about nine miles) of Mangalore, I saw an idol unlike the idols of infidels to be found in all the world. It was a square approximately ten cubits a side, five yards in height, all covered with cast bronze, with four porches. In the entrance portico was a statue in the likeness of a human being, full stature, made of gold. It had two red rubies for eyes, so cunningly made that you would say it could see. What craft and artistry!

➤ Diaries ...

How did Ibn Battuta handle the problem of describing things or situations to people who had not seen or experienced them?

6. BERNIER AND THE "DEGENERATE" EAST

6.1 The question of landownership

Widespread poverty

a concern to maintain or improve the land. It had led to the uniform ruination of agriculture, excessive oppression of the peasantry and a continuous decline in the living standards of all sections of society, except the ruling aristocracy.

Source 11

The poor peasant

An excerpt from Bernier's description of the peasantry in the countryside:

Of the vast tracts of country constituting the empire of Hindustan, many are little more than sand, or barren mountains, badly cultivated, and thinly populated. Even a considerable portion of the good land remains untilled for want of labourers; many of whom perish in consequence of the bad treatment they experience from the Governors. The poor people, when they become incapable of discharging the demands of their rapacious lords, are not only often deprived of the means of subsistence, but are also made to lose their children, who are carried away as slaves. Thus, it happens that the peasantry, driven to despair by so excessive a tyranny, abandon the country.

In this instance, Bernier was participating in contemporary debates in Europe concerning the nature of state and society, and insisted that his description of Mughal India would serve as a warning to those who did not recognise the "merits" of private property.

❓ What, according to Bernier, were the problems faced by peasants in the subcontinent? Do you think his description would have served to strengthen his case?

As an extension of this, Bernier described Indian society as consisting of undifferentiated masses of impoverished people, subjugated by a small minority of a very rich and powerful ruling class. Between the poorest of the poor and the richest of the rich, there was no social group or class worth the name. Bernier confidently asserted: "There is no middle state in India."

Fig. 5.11
Drawings such as this nineteenth-century example often reinforced the notion of an unchanging rural society.

Source 12

A warning for Europe

Bernier warned that if European kings followed the Mughal model:

Their kingdoms would be very far from being well-cultivated and peopled, so well built, so rich, so polite and flourishing as we see them. Our kings are otherwise rich and powerful; and we must avow that they are much better and more royally served. They would soon be kings of deserts and solitudes, of beggars and barbarians such as those are whom I have been representing (the Mughals)...

... We should find the great Cities and the great Burroughs [boroughs] rendered uninhabitable because of ill air, and to fall to ruin without anybody's [anyone's] taking care of repairing them; the hillocks abandoned, and the fields overspread with bushes, or filled with pestilential marishes [marshes], as hath been already intimated...

How does Bernier depict a scenario of decline? Once you have read Chapters 8 and 9, return to this description and analyse it again.

This, then, is how Bernier saw the Mughal Empire – its king was the king of "beggars and barbarians"; its cities and towns were ruined and contaminated with "ill air"; and its fields, "overspread with bushes" and full of "pestilential marishes". And, all this was because of one reason: crown ownership of land.

Curiously, none of the Mughal official documents suggest that the state was the sole owner of land. For instance, Abu'l Fazl, the sixteenth-century official chronicler of Akbar's reign, describes the land revenue as "remunerations of sovereignty", a claim made by the ruler on his subjects for the protection he provided rather than as rent on land that he owned. It is possible that European travellers regarded such claims as rent because land revenue demands were often very high. However, this was actually not a rent or even a land tax, but a tax on the crop (for more details, see Chapter 8).

Bernier's descriptions influenced Western theorists from the eighteenth century onwards. The French philosopher Montesquieu, for instance, used this account to develop the idea of oriental despotism, according to which rulers in Asia (the Orient or the East) enjoyed absolute authority over their subjects, who were kept in conditions of subjugation and poverty, arguing that all land belonged to the king and that private property was non-existent. According to this view, everybody, except the emperor and his nobles, barely managed to survive.

This idea was further developed as the concept of the Asiatic mode of production by Karl Marx in the nineteenth century. He argued that in India (and other Asian countries), before colonialism, surplus was appropriated by the state. This led to the emergence of a society that was composed of a large number of autonomous and internally egalitarian village communities. The imperial court presided over these village communities, respecting their autonomy as long as the flow of surplus was unimpeded. This was regarded as a stagnant system.

However, as we will see (Chapter 8), this picture of rural society was far from true. In fact, during the sixteenth and seventeenth centuries, rural society was characterised by considerable social and economic differentiation. At one end of the spectrum were the big zamindars, who enjoyed superior rights in land and, at the other, the "untouchable" landless

labourers. In between was the big peasant, who used hired labour and engaged in commodity production, and the smaller peasant who could barely produce for his subsistence.

6.2 A more complex social reality

While Bernier's preoccupation with projecting the Mughal state as tyrannical is obvious, his descriptions occasionally hint at a more complex social reality. For instance, he felt that artisans had no incentive to improve the quality of their manufactures, since profits were appropriated by the state. Manufactures were, consequently, everywhere in decline. At the same time, he conceded that vast quantities of the world's precious metals flowed into India, as manufactures were exported in exchange for gold and silver. He also noticed the existence of a prosperous merchant community, engaged in long-distance exchange.

Source: 15

A different socio-economic scenario

Read this excerpt from Bernier's description of both agriculture and craft production:

It is important to observe that of this vast tract of country, a large portion is extremely fertile; the large kingdom of Bengal (Bengal), for instance, surpassing Egypt itself, not only in the production of rice, corn, and other necessaries of life, but of innumerable articles of commerce which are not cultivated in Egypt, such as silks, cotton, and indigo. There are also many parts of the Indies, where the population is sufficiently abundant, and the land pretty well tilled; and where the artisan, although naturally indolent, is yet compelled by necessity or otherwise to employ himself in manufacturing carpets, brocades, embroideries, gold and silver cloths, and the various sorts of silk and cotton goods, which are used in the country or exported abroad.

It should not escape notice that gold and silver, after circulating in every other quarter of the globe, come at length to be swallowed up, lost in some measure in Hindustan.

➲ In what ways is the description in this excerpt different from that in Source 11?

Fig. 5.12
A gold spoon studded with enamels and rubies, an example of the dexterity of Mughal artisans

Source 14

The imperial karkhanas

Bernier is perhaps the only historian who provides a detailed account of the working of the imperial karkhanas or workshops.

Large halls are seen at many places called karkhanas or workshops for the artisans. In one hall embroiderers are busily employed, superintended by a master. In another you see the goldsmiths; in a third, painters; in a fourth, varnishers in lacquer-work; in a fifth, joiners, turners, tailors and shoe-makers; in a sixth, manufacturers of silk, brocade and fine muslins …

The artisans come every morning to their karkhanas where they remain employed the whole day, and in the evening return to their homes. In this quiet regular manner their time glides away, no one aspiring for any improvement in the condition of life wherein he happens to be born …

➤ How does Bernier convey a sense that although there was a great deal of activity, there was little progress?

In fact, during the seventeenth century about 15 per cent of the population lived in towns. This was, on average, higher than the proportion of urban population in Western Europe in the same period. In spite of this Bernier described Mughal cities as "camp towns", by which he meant towns that owed their existence, and depended for their survival, on the imperial camp. He believed that these came into existence when the imperial court moved in and rapidly declined when it moved out. He suggested that they did not have stable social and economic foundations but were dependent on imperial patronage.

As in the case of the question of landownership, Bernier was drawing an oversimplified picture. There were all kinds of towns: manufacturing towns, trading towns, port-towns, sacred centres, pilgrimage towns, etc. Their existence is an index of the prosperity of merchant communities and professional classes.

Merchants often had strong community or kin ties, and were organised into their own caste-cum-occupational bodies. In western India these groups were called mahajans, and their chief, the sheth. In urban centres such as Ahmedabad the mahajans were collectively represented by the chief of the merchant community who was called the nagarsheth.

Other urban groups included professional classes such as physicians (hakim or vaid), teachers (pundit or mulla), lawyers (wakil), painters, architects, musicians, calligraphers, etc. While some depended on imperial patronage, many made their living by serving other patrons, while still others served ordinary people in crowded markets or bazaars.

Why do you think scholars like Bernier chose to compare India with Europe?

7. WOMEN
SLAVES, SATI AND LABOURERS

Travellers who left written accounts were generally men who were interested in and sometimes intrigued by the condition of women in the subcontinent. Sometimes they took social inequities for granted as a "natural" state of affairs. For instance, slaves were openly sold in markets, like any other commodity, and were regularly exchanged as gifts. When Ibn Battuta reached Sind he purchased "horses, camels and slaves" as gifts for Sultan Muhammad bin Tughlaq. When he reached Multan, he presented the governor with, "a slave and horse together with raisins and almonds". Muhammad bin Tughlaq, informs Ibn Battuta, was so happy with the sermon of a preacher named Nasiruddin that he gave him "a hundred thousand tankas (coins) and two hundred slaves".

It appears from Ibn Battuta's account that there was considerable differentiation among slaves. Some female slaves in the service of the Sultan were experts in music and dance, and Ibn Battuta enjoyed their performance at the wedding of the Sultan's sister. Female slaves were also employed by the Sultan to keep a watch on his nobles.

Slaves were generally used for domestic labour, and Ibn Battuta found their services particularly indispensable for carrying women and men in palanquins or dola. The price of slaves, particularly female slaves required for domestic labour, was very low, and most families who could afford to do so kept at least one or two of them.

Contemporary European travellers and writers often highlighted the treatment of women as a crucial marker of difference between Western and Eastern societies. Not surprisingly, Bernier chose the practice of sati for detailed description. He noted that while some women seemed to embrace death cheerfully, others were forced to die.

Slave women

The Battuta informs us

It is the habit of the emperor ... to keep with every one of great or small, one of his slaves who goes in the nobles. He also appoints female scavengers who enter the houses unannounced, and it then the same girls communicate all the information they possess.

Most female slaves were captured in raids and expeditions.

The child sati

This is perhaps one of the most poignant descriptions Bernier:

At Lahore I saw a most beautiful young widow sacrificed, who could not, I think, have been more than twelve years of age. The poor little creature appeared more dead than alive when she approached the dreadful spot; the agony of her mind cannot be described; she trembled and wept bitterly; but three or four of the Brahmanas, assisted by an old woman who held her under the arm, forced the unwilling victim toward the fatal spot, seated her on the wood, tied her hands and feet, lest she should run away, and in that situation the innocent creature was burnt alive. I found it difficult to repress my feelings and to prevent their bursting forth into horror and terrible rage.

However, women's lives revolved around much else besides the practice of sati. Their labour was crucial in both agricultural and non-agricultural production. Women from merchant families participated in commercial activities, sometimes even taking mercantile disputes to the court of law. It therefore seems unlikely that women were confined to the private spaces of their homes.

You may have noticed that travellers' accounts provide us with a tantalising glimpse of the lives of men and women during these centuries. However, their observations were often shaped by the contexts from which they came. At the same time, there were many aspects of social life that these travellers did not notice.

Also relatively unknown are the experiences and observations of men (and possibly women) from the subcontinent who crossed seas and mountains and ventured into lands beyond the subcontinent. What did they see and hear? How were their relations with peoples of distant lands shaped? What were the languages they used? These and other questions will hopefully be systematically addressed by historians in the years to come.

ANSWER IN 100-150 WORDS

1. Write a note on the Kitab-ul Hind.

2. Compare and contrast the perspectives from which Ibn Battuta and Bernier wrote their accounts of their travels in India.

3. Discuss the picture of urban centres that emerges from Bernier's account.

4. Analyse the evidence for slavery provided by Ibn Battuta.

5. What were the elements of the practice of sati that drew the attention of Bernier?

WRITE A SHORT ESSAY (ABOUT 250-300 WORDS) ON THE FOLLOWING:

6. Discuss Al-Biruni's understanding of the caste system.

7. Do you think Ibn Battuta's account is useful in arriving at an understanding of life in contemporary urban centres? Give reasons for your answer.

8. Discuss the extent to which Bernier's account enables historians to reconstruct contemporary rural society.

9. Read this excerpt from Bernier:

> Numerous are the instances of handsome pieces of workmanship made by persons destitute of tools, and who can scarcely be said to have received instruction from a master. Sometimes they imitate so perfectly articles of European manufacture that the difference between the original and copy can hardly be discerned. Among other things, the Indians make excellent muskets, and fowling-pieces, and work beautiful gold ornaments that it may be doubted if the exquisite workmanship of those articles can be exceeded by any European goldsmith. I have often admired the beauty, softness, and delicacy of their paintings.

List the crafts mentioned in the passage. Compare these with the descriptions of artisanal activity in the chapter.

MAP WORK

10. On an outline map of the world mark the countries visited by Ibn Battuta. What are the seas that he may have crossed?

PROJECTS (CHOOSE ONE)

11. Interview any one of your older relatives (mother/ father/grandparents/uncles/aunts) who has travelled outside your town or village. Find out (a) where they went, (b) how they travelled, (c) how long did it take, (d) why did they travel (e) and did they face any difficulties. List as many similarities and differences that they may have noticed between their place of residence and the place they visited, focusing on language, clothes, food, customs, buildings, roads, the lives of men and women. Write a report on your findings.

12. For any one of the travellers mentioned in this chapter, find out more about his life and writings. Prepare a report on his travels, noting in particular how he described society, and comparing these descriptions with the excerpts included in the chapter.

BHAKTI-SUFI TRADITIONS
CHANGES IN RELIGIOUS BELIEFS AND DEVOTIONAL TEXTS
(C. EIGHTH TO EIGHTEENTH CENTURY)

We saw in Chapter 4 that by the mid-first millennium CE the landscape of the subcontinent was dotted with a variety of religious structures – stupas, monasteries, temples. If these typified certain religious beliefs and practices, others have been reconstructed from textual traditions, including the Puranas, many of which received their present shape around the same time, and yet others remain only faintly visible in textual and visual records.

New textual sources available from this period include compositions attributed to poet-saints, most of whom expressed themselves orally in regional languages used by ordinary people. These compositions, which were often set to music, were compiled by disciples or devotees, generally after the death of the poet-saint. What is more, these traditions were fluid – generations of devotees tended to elaborate on the original message, and occasionally modified or even abandoned some of the ideas that appeared problematic or irrelevant in different political, social or cultural contexts. Using these sources thus poses a challenge to historians.

Historians also draw on hagiographies or biographies of saints written by their followers (or members of their religious sect). These may not be literally accurate, but allow a glimpse into the ways in which devotees perceived the lives of these path-breaking women and men.

As we will see, these sources provide us with insights into a scenario characterised by dynamism and diversity. Let us look at some elements of these more closely.

Fig. 6.1
A twelfth-century bronze sculpture of Manikkavachakar, a devotee of Shiva who composed beautiful devotional songs in Tamil

1. A MOSAIC OF RELIGIOUS BELIEFS AND PRACTICES

Perhaps the most striking feature of this phase is the increasing visibility of a wide range of gods and goddesses in sculpture as well as in texts. At one level, this indicates the continued and even extended worship of the major deities – Vishnu, Shiva and the goddess – each of whom was visualised in a variety of forms.

1.1 The integration of cults

Historians who have tried to understand these developments suggest that there were at least two processes at work. One was a process of disseminating Brahmanical ideas. This is exemplified by the composition, compilation and preservation of Puranic texts in simple Sanskrit verse, explicitly meant to be accessible to women and Shudras, who were generally excluded from Vedic learning. At the same time, there was a second process at work – that of the Brahmanas accepting and reworking the beliefs and practices of these and other social categories. In fact, many beliefs and practices were shaped through a continuous dialogue between what sociologists have described as "great" Sanskritic Puranic traditions and "little" traditions throughout the land.

One of the most striking examples of this process is evident at Puri, Orissa, where the principal deity was identified, by the twelfth century, as Jagannatha (literally, the lord of the world), a form of Vishnu.

Fig. 6.2
Jagannatha (extreme right) with his sister Subhadra (centre) and his brother Balarama (left)

If you compare Fig. 6.2 with Fig. 4.28 (Chapter 4) you will notice that the deity is represented in a very different way. In this instance, a local deity, whose image was and continues to be made of wood by local tribal specialists, was recognised as a form of Vishnu. At the same time, Vishnu was visualised in a way that was very different from that in other parts of the country.

Such instances of integration are evident amongst goddess cults as well. Worship of the goddess, often simply in the form of a stone smeared with ochre, was evidently widespread. These local deities were often incorporated within the Puranic framework by providing them with an identity as a wife of the principal male deities – sometimes they were equated with Lakshmi, the wife of Vishnu, in other instances, with Parvati, the wife of Shiva.

1.2 Difference and conflict

Often associated with the goddess were forms of worship that were classified as Tantric. Tantric practices were widespread in several parts of the subcontinent – they were open to women and men, and practitioners often ignored differences of caste and class within the ritual context. Many of these ideas influenced Shaivism as well as Buddhism, especially in the eastern, northern and southern parts of the subcontinent.

All of these somewhat divergent and even disparate beliefs and practices would come to be classified as Hindu over the course of the next millennium. The divergence is perhaps most stark if we compare Vedic and Puranic traditions. The principal deities of the Vedic pantheon, Agni, Indra and Soma, become marginal figures, rarely visible in textual or visual representations. And while we can catch a glimpse of Vishnu, Shiva and the goddess in Vedic mantras, these have little in common with the elaborate Puranic mythologies. However, in spite of these obvious discrepancies, the Vedas continued to be revered as authoritative.

Not surprisingly, there were sometimes conflicts as well – those who valued the Vedic tradition often condemned practices that went beyond the closely regulated contact with the divine through the performance of sacrifices or precisely chanted mantras. On the other hand, those engaged in Tantric practices

Fig. 6.3
Sculpture of a Buddhist goddess, Marichi, c. tenth century, Bihar, an example of the process of integration of different religious beliefs and practices.

frequently ignored the authority of the Vedas. Also, devotees often tended to project their chosen deity, either Vishnu or Shiva, as supreme. Relations with other traditions, such as Buddhism or Jainism, were also often fraught with tension if not open conflict.

The traditions of devotion or bhakti need to be located within this context. Devotional worship had a long history of almost a thousand years before the period we are considering. During this time, expressions of devotion ranged from the routine worship of deities within temples to ecstatic adoration where devotees attained a trance-like state. The singing and chanting of devotional compositions was often a part of such modes of worship. This was particularly true of the Vaishnava and Shaiva sects.

2. POEMS OF PRAYER
EARLY TRADITIONS OF BHAKTI

In the course of the evolution of these forms of worship, in many instances, poet-saints emerged as leaders around whom there developed a community of devotees. Further, while Brahmanas remained important intermediaries between gods and devotees in several forms of bhakti, these traditions also accommodated and acknowledged women and the "lower castes", categories considered ineligible for liberation within the orthodox Brahmanical framework. What also characterised traditions of bhakti was a remarkable diversity.

At a different level, historians of religion often classify bhakti traditions into two broad categories: saguna (with attributes) and nirguna (without attributes). The former included traditions that focused on the worship of specific deities such as Shiva, Vishnu and his avatars (incarnations) and forms of the goddess or Devi, all often conceptualised in anthropomorphic forms. Nirguna bhakti on the other hand was worship of an abstract form of god.

2.1 The Alvars and Nayanars of Tamil Nadu

Some of the earliest bhakti movements (c. sixth century) were led by the Alvars (literally, those who are "immersed" in devotion to Vishnu) and Nayanars (literally, leaders who were devotees of Shiva). They travelled from place to place singing hymns in Tamil in praise of their gods.

Source 1

The chaturvedin (Brahmana versed in the four Vedas) and the "outcaste"

This is an excerpt from a composition of an Alvar named Tondaradippodi, who was a Brahmana.

You [Vishnu] manifest like these "servants" who express their love for your feet though they may be born outside the four castes more than the Chaturvedis who are strangers and without allegiance to your service.

➲ Do you think Tondaradippodi was opposed to the caste system?

Source 2

Shastras or devotion?

This is a verse composed by Appar, a Nayanar saint:

O rogues who quote the law books.

Of what use are your gotra and birth?

Just bow to Marperu [the Shiva who resides in Marperu in Thanjavur, Tamil Nadu] as your sole refuge.

➲ Are there any similarities or differences in the attitudes of Tondaradippodi and Appar towards Brahmanas?

During their travels the Alvars and Nayanars identified certain shrines as abodes of their chosen deities. Very often large temples were later built at these sacred places. These developed as centres of pilgrimage. Singing compositions of these poet-saints became part of temple rituals in these shrines, as did worship of the saints' images.

2.2 Attitudes towards caste

Some historians suggest that the Alvars and Nayanars initiated a movement of protest against the caste system and the dominance of Brahmanas or at least attempted to reform the system. To some extent this is corroborated by the fact that bhaktas hailed from diverse social backgrounds ranging from Brahmanas to artisans and cultivators and even from castes considered "untouchable".

The importance of the traditions of the Alvars and Nayanars was sometimes indicated by the claim that their compositions were as important as the Vedas. For instance, one of the major anthologies of compositions by the Alvars, the *Nalayira Divyaprabandham*, was frequently described as the Tamil Veda, thus claiming that the text was as significant as the four Vedas in Sanskrit that were cherished by the Brahmanas.

2.3 Women devotees

Perhaps one of the most striking features of these traditions was the presence of women. For instance, the compositions of Andal, a woman Alvar, were widely sung (and continue to be sung to date). Andal saw herself as the beloved of Vishnu; her verses express her love for the deity. Another woman, Karaikkal Ammaiyar, a devotee of Shiva, adopted the path of extreme asceticism in order to attain

Compilations of devotional literature

By the tenth century the compositions of the 12 Alvars were compiled in an anthology known as the *Nalayira Divyaprabandham* (Four Thousand Sacred Compositions).

The poems of Appar, Sambandar and Sundarar form the *Tevaram*, a collection that was compiled and classified in the tenth century on the basis of the music of the songs.

her goal. Her compositions were preserved within the Nayanar tradition. These women renounced their social obligations, but did not join an alternative order or become nuns. Their very existence and their compositions posed a challenge to patriarchal norms.

Source 5

A demon?

This is an excerpt from a poem by Karaikkal Ammaiyar in which she describes herself:

The female Pey (demoness)
with ... bulging veins
protruding eyes, white teeth and shrunken stomach,
red haired and jutting teeth
lengthy shins extending till the ankles
shouts and wails
while wandering in the forest
This is the forest of Alankatu,
which is the home of our father (Siva)
who dances ... with his matted hair
thrown in all eight directions, and with cool limbs

☐ List the ways in which Karaikkal Ammaiyar depicts herself as presenting a contrast to traditional notions of feminine beauty.
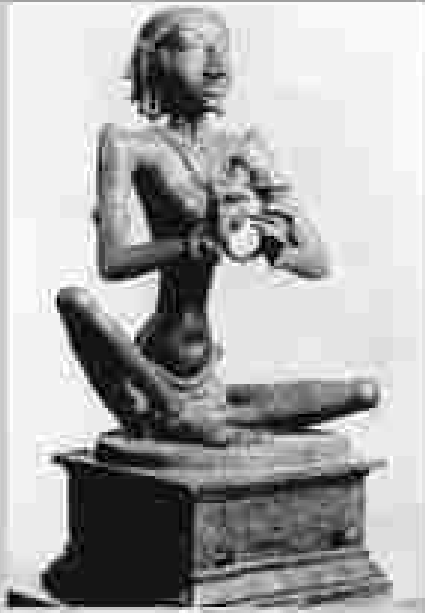

*Fig. 6.4
A ninth-century bronze image of Karaikkal Ammaiyar*

2.4 Relations with the state

We saw in Chapter 2 that there were several important chiefdoms in the Tamil region in the early first millennium CE. From the second half of the first millennium there is evidence for states, including those of the Pallavas and Pandyas (c. sixth to ninth centuries CE). While Buddhism and Jainism had been prevalent in this region for several centuries, drawing support from merchant and artisan communities, these religious traditions received occasional royal patronage.

Interestingly, one of the major themes in Tamil bhakti hymns is the poetic opposition to Buddhism and Jainism. This is particularly marked in the

compositions of the Nayanars. Historians have attempted to explain this hostility by suggesting that it was due to competition between members of other religious traditions for royal patronage. What is evident is that the powerful Chola rulers (ninth to thirteenth centuries) supported Brahmanical and bhakti traditions, making land grants and constructing temples for Vishnu and Shiva.

In fact, some of the most magnificent Shiva temples, including those at Chidambaram, Thanjavur and Gangaikondacholapuram, were constructed under the patronage of Chola rulers. This was also the period when some of the most spectacular representations of Shiva in bronze sculpture were produced. Clearly, the visions of the Nayanars inspired artists.

Both Nayanars and Alvars were revered by the Vellala peasants. Not surprisingly, rulers tried to win their support as well. The Chola kings, for instance, often attempted to claim divine support and proclaim their own power and status by building splendid temples that were adorned with stone and metal sculpture to recreate the visions of these popular saints who sang in the language of the people.

These kings also introduced the singing of Tamil Shaiva hymns in the temples under royal patronage, taking the initiative to collect and organise them into a text (Tevaram). Further, inscriptional evidence from around 945 suggests that the Chola ruler Parantaka I had consecrated metal images of Appar, Sambandar and Sundarar in a Shiva temple. These were carried in processions during the festivals of these saints.

Fig. 6.5
An image of Shiva as Nataraja

3. THE VIRASHAIVA TRADITION IN KARNATAKA

The twelfth century witnessed the emergence of a new movement in Karnataka, led by a Brahmana named Basavanna (1106-68) who was initially a Jaina and a minister in the court of a Chalukya king. His followers were known as Virashaivas (heroes of Shiva) or Lingayats (wearers of the linga).

Lingayats continue to be an important community in the region to date. They worship Shiva in his manifestation as a linga, and men usually wear a small linga in a silver case on a loop strung over the left shoulder. Those who are revered include the jangama or wandering monks. Lingayats believe that on death the devotee will be united with Shiva and will not return to this world. Therefore they do not practise funerary rites such as cremation, prescribed in the Dharmashastras. Instead, they ceremonially bury their dead.

The Lingayats challenged the idea of caste and the "pollution" attributed to certain groups by Brahmanas. They also questioned the theory of rebirth. These won them followers amongst those who were marginalised within the Brahmanical social order. The Lingayats also encouraged certain practices disapproved in the Dharmashastras, such as post-puberty marriage and the remarriage of widows. Our understanding of the Virashaiva tradition is derived from vachanas (literally, sayings) composed in Kannada by women and men who joined the movement.

Source 4

Rituals and the real world

Here is a vachana composed by Basavanna:

The rich
will make temples for Shiva.
What shall I,
a poor man,
do?

My legs are pillars,
the body the shrine,
the head a cupola
of gold.

Listen, O lord of the meeting rivers,
things standing shall fall,
but the moving ever shall stay.

➤ Describe Basavanna's attitude towards temples. How does he attempt to convince the listener?

New religious developments

This period also witnessed two major developments. On the one hand, many ideas of the Tamil bhaktas (especially the Vaishnavas) were incorporated within the Sanskritic tradition, culminating in the composition of one of the best-known Puranas, the Bhagavata Purana. Second, we find the development of traditions of bhakti in Maharashtra in the thirteenth century.

4. RELIGIOUS FERMENT IN NORTH INDIA

During the same period, in north India deities such as Vishnu and Shiva were worshipped in temples, often built with the support of rulers. However, historians have not found evidence of anything resembling the compositions of the Alvars and Nayanars till the fourteenth century. How do we account for this difference?

Some historians point out that in north India this was the period when several Rajput states emerged. In most of these states Brahmanas occupied positions of importance, performing a range of secular and ritual functions. There seems to have been little or no attempt to challenge their position directly.

At the same time other religious leaders, who did not function within the orthodox Brahmanical framework, were gaining ground. These included the Naths, Jogis and Siddhas. Many of them came from artisanal groups, including weavers, who were becoming increasingly important with the development of organised craft production. Demand for such production grew with the emergence of new urban centres, and long-distance trade with Central Asia and West Asia.

Many of these new religious leaders questioned the authority of the Vedas, and expressed themselves in languages spoken by ordinary people, which developed over centuries into the ones used today. However, in spite of their popularity these religious leaders were not in a position to win the support of the ruling elites.

A new element in this situation was the coming of the Turks which culminated in the establishment of the Delhi Sultanate (thirteenth century). This undermined the power of many of the Rajput states and the Brahmanas who were associated with these kingdoms. This was accompanied by marked changes in the realm of culture and religion. The coming of the sufis (Section 6) was a significant part of these developments.

Fig. 6.6
Fragment of a page from the Qur'an, belonging to a manuscript dating to the eighth or ninth century.

5. New Strands in the Fabric
Islamic Traditions

Just as the regions within the subcontinent were not isolated from one another, so too, contact with lands beyond the seas and mountains had existed for millennia. Arab merchants, for instance, frequented ports along the western coast in the first millennium CE, while Central Asian peoples settled in the north-western parts of the subcontinent during the same period. From the seventh century, with the advent of Islam, these regions became part of what is often termed the Islamic world.

5.1 Faiths of rulers and subjects

One axis of understanding the significance of these connections that is frequently adopted is to focus on the religions of ruling elites. In 711 an Arab general named Muhammad Qasim conquered Sind, which became part of the Caliph's domain. Later (c. thirteenth century) the Turks and Afghans established the Delhi Sultanate. This was followed by the formation of Sultanates in the Deccan and other parts of the subcontinent. Islam was an acknowledged religion of rulers in several areas. This continued with the establishment of the Mughal Empire in the sixteenth century as well as in many of the regional states that emerged in the eighteenth century.

Theoretically, Muslim rulers were to be guided by the ulama, who were expected to ensure that they ruled according to the shari'a. Clearly, the situation was complicated in the subcontinent, where there were populations that did not subscribe to Islam.

It is in this context that the category of the zimmi, meaning protected (derived from the Arabic word zimma, protection) developed for peoples who followed revealed scriptures, such as the Jews and Christians, and lived under Muslim rulership. They paid a tax called jizya and gained the right to be protected by Muslims. In India this status was extended to Hindus as well. As you will see (Chapter 9), rulers such as the Mughals came to regard themselves as emperors of not just Muslims but of all peoples.

In effect, rulers often adopted a fairly flexible policy towards their subjects. For instance, several rulers gave land endowments and granted tax exemptions to Hindu, Jaina, Zoroastrian, Christian and Jewish religious institutions and also expressed respect and

Ulama (plural of alim or one who knows) are scholars in Islamic studies. As guardians of this tradition they perform various religious, juridical and teaching functions.

Shari'a

The shari'a is the law governing the Muslim community. It is based on the Qur'an and the hadis, traditions of the Prophet including a record of his remembered words and deeds.

With the expansion of Islamic rule outside Arabia, in areas where customs and traditions were different, qiyas (reasoning by analogy) and ijma (consensus of the community) were recognised as two other sources of legislation. Thus the shari'a evolved from the Qur'an, hadis, qiyas and ijma.

devotion towards non-Muslim religious leaders. These grants were made by several Mughal rulers, including Akbar and Aurangzeb.

The possessor of the sublime station, Shiv Murat, Guru Anand Nath Jio.

May your Reverence remain in peace and happiness ever under the protection of Shri Jio.

... A piece of cloth for the cloak and a sum of twenty-five rupees which have been sent as an offering will reach Your Reverence ... Your Reverence may write to us whenever there is any service which can be rendered by us.

> Identify the deity worshipped by the Jogi. Describe the attitude of the emperor towards the Jogi.

5.2 The popular practice of Islam

The developments that followed the coming of Islam were not confined to ruling elites; in fact they permeated far and wide, through the subcontinent, amongst different social strata – peasants, artisans, warriors, merchants, to name a few. All those who adopted Islam accepted, in principle, the five "pillars" of the faith: that there is one God, Allah, and Prophet Muhammad is his messenger (shahada); offering prayers five times a day (namaz/salat); giving alms (zakat); fasting during the month of Ramzan (sawm); and performing the pilgrimage to Mecca (hajj).

However, these universal features were often overlaid with diversities in practice derived from sectarian affiliations (Sunni, Shi'a), and the influence of local customary practices of converts from different social milieus. For example, the Khojahs, a branch of the Ismailis (a Shi'a sect), developed new modes of communication, disseminating ideas derived from the Qur'an through indigenous literary genres. These included the ginan (derived from the Sanskrit jnana, meaning "knowledge"), devotional poems in Punjabi, Multani, Sindhi, Kachchi, Hindi and Gujarati, sung in special ragas during daily prayer meetings.

Elsewhere, Arab Muslim traders who settled along the Malabar coast (Kerala) adopted the local language, Malayalam. They also adopted local customs such as matriliny (Chapter 1) and matrilocal residence.

The complex blend of a universal faith with local traditions is perhaps best exemplified in the architecture of mosques. Some architectural features

Fig. 6.8
A Khojah manuscript
The ginan were transmitted orally before being recorded in the Khojaki script that was derived from the local Sindhi ("clipped" mercantile script) used by the linguistically diverse community of Khojahs in the Punjab, Sind and Gujarat.

Matrilocal residence is a practice where women after marriage remain in their natal home with their children and the husbands may reside with them.

of mosques are universal – such as
their orientation towards Mecca,
evident in the placement of the mihrab
(prayer niche) and the minbar (pulpit).
However, there are several features
that show variations – such as roofs
and building materials (see Figs. 6.9,
6.10 and 6.11).

5.3 Names for communities

We often take the terms Hindu and
Muslim for granted, as labels for
religious communities. Yet these
terms did not gain currency for a very
long time. Historians who have studied
Sanskrit texts and inscriptions dating
between the eighth and fourteenth
centuries point out that the term
musalman or Muslim was virtually
never used. Instead, people were
occasionally identified in terms of
the region from which they came.
So, the Turkish rulers were designated
as Turushka, Tajika were people from
Tajikistan, and Parashika were people
from Persia. Sometimes, terms used
for other peoples were applied to the
new migrants. For instance, the
Turks and Afghans were referred to
as Shakas (Chapters 2 and 3) and
Yavanas (a term used for Greeks).

A more general term for these migrant
communities was mlechchha, indicating that they did
not observe the norms of caste society and spoke
languages that were not derived from Sanskrit. Such
terms sometimes had a derogatory connotation, but they
rarely denoted a distinct religious community of Muslims
in opposition to Hindus. And as we saw (Chapter 3),
the term "Hindu" was used in a variety of ways, not
necessarily restricted to a religious connotation.

6. The Growth of Sufism

In the early centuries of Islam a group of religious-minded people called sufis turned to asceticism and mysticism in protest against the growing materialism of the Caliphate as a religious and political institution. They were critical of the dogmatic definitions and scholastic methods of interpreting the Qur'an and sunna (traditions of the Prophet) adopted by theologians. Instead, they laid emphasis on seeking salvation through intense devotion and love for God by following His commands, and by following the example of the Prophet Muhammad whom they regarded as a perfect human being. The sufis thus sought an interpretation of the Qur'an on the basis of their personal experience.

6.1 Khanqahs and silsilas

By the eleventh century Sufism evolved into a well-developed movement with a body of literature on Quranic studies and sufi practices. Institutionally, the sufis began to organise communities around the hospice or khanqah (Persian) controlled by a teaching master known as shaikh (in Arabic), pir or murshid (in Persian). He enrolled disciples (murids) and appointed a successor (khalifa). He established rules for spiritual conduct and interaction between inmates as well as between laypersons and the master.

Sufi silsilas began to crystallise in different parts of the Islamic world around the twelfth century. The word silsila literally means a chain, signifying a continuous link between master and disciple, stretching as an unbroken spiritual genealogy to the Prophet Muhammad. It was through this channel that spiritual power and blessings were transmitted to devotees. Special rituals of initiation were developed in which initiates took an oath of allegiance, wore a patched garment, and shaved their hair.

When the shaikh died, his tomb-shrine (dargah, a Persian term meaning court) became the centre of devotion for his followers. This encouraged the practice of pilgrimage or ziyarat to his grave, particularly on his death anniversary or urs (or marriage, signifying the union of his soul with God). This was because people believed that in death saints were united with God, and were thus closer to Him than when living. People sought their blessings to attain material and spiritual benefits. Thus evolved the cult of the shaikh revered as wali.

Wali (plural auliya) is literally 'a friend of God' was a sufi who claimed proximity to Allah, acquiring His Grace (barakat) to perform miracles (karamat).

6.2 Outside the khanqah

Some mystics initiated movements based on a radical interpretation of sufi ideals. Many scorned the khanqah and took to mendicancy and observed celibacy. They ignored rituals and observed extreme forms of asceticism. They were known by different names – Qalandars, Madaris, Malangs, Haidaris, etc. Because of their deliberate defiance of the shari'a they were often referred to as be-shari'a, in contrast to the ba-shari'a sufis who complied with it.

7. THE CHISHTIS IN THE SUBCONTINENT

Of the groups of sufis who migrated to India in the late twelfth century, the Chishtis were the most influential. This was because they adapted successfully to the local environment and adopted several features of Indian devotional traditions.

7.1 Life in the Chishti khanqah

The khanqah was the centre of social life. We know about Shaikh Nizamuddin's hospice (c. fourteenth century) on the banks of the river Yamuna in Ghiyaspur, on the outskirts of what was then the city of Delhi. It comprised several small rooms and a big hall (jama'at khana) where the inmates and visitors lived and prayed. The inmates included family members of the Shaikh, his attendants and disciples. The Shaikh lived in a small room on the roof of the hall where he met visitors in the morning and evening. A verandah surrounded the courtyard, and a boundary wall ran around the complex. On one occasion, fearing a Mongol invasion, people from the neighbouring areas flocked into the khanqah to seek refuge.

MAJOR TEACHERS OF THE CHISHTI SILSILA		
SUFI TEACHERS	YEAR OF DEATH	LOCATION OF DARGAH
Shaikh Muinuddin Sijzi	1235	Ajmer (Rajasthan)
Khwaja Qutbuddin Bakhtiyar Kaki	1235	Delhi
Shaikh Fariduddin Ganj-i Shakar	1265	Ajodhan (Pakistan)
Shaikh Nizamuddin Auliya	1325	Delhi
Shaikh Nasiruddin Chiragh-i Dehli	1356	Delhi

There was an open kitchen (langar), run on futuh (unasked-for charity). From morning till late night people from all walks of life – soldiers, slaves, singers, merchants, poets, travellers, rich and poor, Hindu jogis (yogi) and qalandars – came seeking discipleship, amulets for healing, and the intercession of the Shaikh in various matters. Other visitors included poets such as Amir Hasan Sijzi and Amir Khusrau and the court historian Ziyauddin Barani, all of whom wrote about the Shaikh. Practices that were adopted, including bowing before the Shaikh, offering water to visitors, shaving the heads of initiates, and yogic exercises, represented attempts to assimilate local traditions.

Shaikh Nizamuddin appointed several spiritual successors and deputed them to set up hospices in various parts of the subcontinent. As a result the teachings, practices and organisation of the Chishtis as well as the fame of the Shaikh spread rapidly. This in turn drew pilgrims to his shrine, and also to the shrines of his spiritual ancestors.

7.2 Chishti devotionalism: *ziyarat* and *qawwali*

Pilgrimage, called *ziyarat*, to tombs of sufi saints is prevalent all over the Muslim world. This practice is an occasion for seeking the sufi's spiritual grace (*barakat*). For more than seven centuries people of various creeds, classes and social backgrounds have expressed their devotion at the *dargahs* of the five great Chishti saints (see chart on p.154). Amongst these, the most revered shrine is that of Khwaja Muinuddin, popularly known as "Gharib Nawaz" (comforter of the poor).

The earliest textual references to Khwaja Muinuddin's *dargah* date to the fourteenth century. It was evidently popular because of the austerity and piety of its Shaikh, the greatness of his spiritual successors, and the patronage of royal visitors. Muhammad bin Tughlaq (ruled, 1324-51) was the

The story of
Data Ganj Bakhsh

In 1039 Abu'l Hasan al-Hujwiri, a native of Hujwir near Ghazni in Afghanistan, was forced to cross the Indus as a captive of the invading Turkish army. He settled in Lahore and wrote a book in Persian called the *Kashf al-Mahjub* (Unveiling of the Veiled) to explain the meaning of *tasawwuf*, and those who practised it, that is, the sufi.

Hujwiri died in 1073 and was buried in Lahore. The grandson of Sultan Mahmud of Ghazni constructed a tomb over his grave, and this tomb-shrine became a site of pilgrimage for his devotees, especially on his death anniversary.

Even today Hujwiri is revered as Data Ganj Bakhsh or "Giver who bestows treasures" and his mausoleum is called Data Darbar or "Court of the Giver".

first Sultan to visit the shrine, but the earliest construction to house the tomb was funded in the late fifteenth century by Sultan Ghiyasuddin Khalji of Malwa. Since the shrine was located on the trade route linking Delhi and Gujarat, it attracted a lot of travellers.

By the sixteenth century the shrine had become very popular; in fact it was the spirited singing of pilgrims bound for Ajmer that inspired Akbar to visit the tomb. He went there fourteen times, sometimes twice or thrice times a year, to seek blessings for new conquests, fulfilment of vows, and the birth of sons. He maintained this tradition until 1580. Each of these visits was celebrated by generous gifts, which were recorded in Imperial documents. For example, in 1568 he offered a huge cauldron (degh) to facilitate cooking for pilgrims. He also had a mosque constructed within the compound of the dargah.

The pilgrimage of the Mughal princess Jahanara, 1643

The following is an excerpt from Jahanara's biography of Shaikh Muinuddin Chishti, titled *Munis al-Arwah* (The Confidant of Spirits):

After praising the one God ... this lowly faqira (humble soul) Jahanara ... went from the capital Agra in the company of my great father (Emperor Shah Jahan) towards the pure region of incomparable Ajmer ... I was committed to the idea that every day in every station I would perform two cycles of optional prayer ...

For several days ... I did not sleep on a leopard skin at night. I did not extend my feet in the direction of the blessed sanctuary of the revered saving master; and I did not turn my back towards him. I passed the days beneath the trees.

On Thursday, the fourth of the blessed month of Ramzan, I attained the happiness of pilgrimage to the illuminated and the perfumed tomb ... With an hour of daylight remaining, I went to the holy sanctuary and rubbed my pale face with the dust of that threshold. From the doorway to the blessed tomb I went barefoot, kissing the ground. Having entered the dome, I went around the sanctified tomb of my master seven times ...

Finally, with my own hand I put the finest quality of itr on the perfumed tomb of the revered one, and having taken off the rose scarf that I had on my head, I placed it on the top of the blessed tomb ...

> What are the gestures that Jahanara records to indicate her devotion to the Shaikh? How does she suggest that the dargah was a special place?

The lamp of the entire land

Each sufi shrine was associated with distinctive festivals. This is what an eighteenth-century writer from the Deccan, Dargah Quli Khan, wrote about the shrine of Nizamuddin Chishti, Dehli, in his *Muraqqa-i Dehli* (Album of Delhi):

The Shaikh (in the grave) is not the lamp of Delhi but of the entire country. People turn up there in crowds, particularly on Sunday. In the month of Diwali the entire population of Delhi visits it and stays in tents around the spring tank for days. They take baths to obtain cures from chronic diseases. Muslims and Hindus pay visits in the same spirit. From morning till evening people come and also enjoy themselves, busy in merrymaking in the shade of the trees.

Also part of ziyarat is the use of music and dance (including mystical chants) performed by specially trained musicians or qawwals to evoke divine ecstasy. The sufis remember God either by reciting the zikr (the Divine Names) or evoking His Presence through sama' (literally, "audition") or performance of mystical music. Sama' was integral to the Chishtis, and exemplified interaction with indigenous devotional traditions.

Amir Khusrau and the qaul

Amir Khusrau (1253-1325), the great poet, musician and disciple of Shaikh Nizamuddin Auliya, gave a unique form to the Chishti sama' by introducing the qaul (Arabic word meaning "saying") a hymn sung at the opening or closing of qawwali. This was followed by sufi poetry in Persian, Hindavi or Urdu, and sometimes using words from all of these languages. Qawwals (those who sing these songs) at the shrine of Shaikh Nizamuddin Auliya always start their recital with the qaul. Today, qawwali is performed in shrines all over the subcontinent.

Fig. 6.14
Qawwali at the dargah of Nizamuddin Auliya

7.3 Languages and communication

It was not just in sama' that the Chishtis adopted local languages. In Delhi, those associated with the Chishti silsila conversed in Hindavi, the language of the people. Other sufis such as Baba Farid composed verses in the local language, which were incorporated in the Guru Granth Sahib. Yet others composed long poems or masnavis to express ideas of divine love using human love as an allegory. For example, the prem-akhyan (love story) Padmavat composed by Malik Muhammad Jayasi revolved around the romance of Padmini and Ratansen, the king of Chittor. Their trials were symbolic of the soul's journey to the divine. Such poetic compositions were often recited in hospices, usually during sama'.

A different genre of sufi poetry was composed in and around the town of Bijapur, Karnataka. These were short poems in Dakhani (a variant of Urdu) attributed to Chishti sufis who lived in this region during the seventeenth and eighteenth centuries. These poems were probably sung by women while performing household chores like grinding grain and spinning. Other compositions were in the form of lorinama or lullabies and shadinama or wedding songs. It is likely that the sufis of this region were inspired by the pre-existing bhakti tradition of the Kannada vachanas of the Lingayats and the Marathi abhangs of the saints of Pandharpur. It is through this medium that Islam gradually gained a place in the villages of the Deccan.

Source 8

Chishti devotionalism

A song set to the rhythm of the spinning wheel:

As you take the cotton, you do zikr-i jali.
As you separate the cotton, you should do zikr-i qalbi.
And as you spool the thread you should do zikr-i aini.
Zikr should be uttered from the stomach through the chest,
And threaded through the throat.
The threads of breath should be counted one by one, oh sister.
Up to twenty-four thousand.
Do this day and night,
And offer this to your pir as a gift.

7.4 Sufis and the state

A major feature of the Chishti tradition was austerity, including maintaining a distance from worldly power. However, this was by no means a situation of absolute isolation from political power. The sufis accepted unsolicited grants and donations from the political elites. The Sultans in turn set up charitable trusts (auqaf) as endowments for hospices and granted tax-free land (inam).

The Chishtis accepted donations in cash and kind. Rather than accumulate donations, they preferred to use these fully on immediate requirements such as food, clothes, living quarters and ritual necessities (such as sama'). All this enhanced the moral authority of the shaikhs, which in turn attracted people from all walks of life. Further, their piety and scholarship, and people's belief in their miraculous powers made sufis popular among the masses, whose support kings wished to secure.

Kings did not simply need to demonstrate their association with sufis; they also required legitimation from them. When the Turks set up the Delhi Sultanate, they resisted the insistence of the ulama on imposing shari'a as state law because they anticipated opposition from their subjects, the majority of whom were non-Muslims. The Sultans then sought out the sufis – who derived their authority directly from God – and did not depend on jurists to interpret the shari'a.

Besides, it was believed that the auliya could intercede with God in order to improve the material and spiritual conditions of ordinary human beings. This explains why kings often wanted their tombs to be in the vicinity of sufi shrines and hospices.

However, there were instances of conflict between the Sultans and the sufis. To assert their authority, both expected that certain rituals be performed such as prostration and kissing of the feet. Occasionally the sufi shaikh was addressed with high-sounding titles. For example, the disciples of Nizamuddin Auliya addressed him as sultan-ul-mashaikh (literally, Sultan amongst shaikhs).

> ### Sufis and the state
> Other sufis such as the Suhrawardi under the Delhi Sultans and the Naqshbandi under the Mughals were also associated with the state. However, the modes of their association were not the same as those of the Chishtis. In some cases, sufis accepted county offices.

Discuss...

What are the potential sources of conflict in the relationship between religious and political leaders?

Declining a royal gift

This excerpt from a *malfuz* describes the proceedings at Shaikh Nizamuddin Auliya's hospice in 1313:

I, the author, Amir Hasan Sijzi, had the good fortune of kissing his (Shaikh Nizamuddin Auliya's) feet ... At this time a local ruler had sent him the deed of proprietorship to two gardens and much land, along with the provisions and tools for their maintenance. The ruler had also made it clear that he was relinquishing all his rights to both the gardens and land. The master ... had not accepted the gift. Instead, he had lamented: "What have I to do with gardens and fields and lands? ... None of our spiritual masters had engaged in such activity."

Then he told an appropriate story: "... Sultan Ghiyasuddin, who at that time was still known as Ulugh Khan, came to visit Shaikh Fariduddin (and) offered some money and property deeds for four villages to the Shaikh, the money being for the benefit of the dependants (sufis) ... and the land for his use. Seeing Shaikh al-Islam (Fariduddin) said: 'Give me the money. I will dispense it to the dervishes. But as for those land deeds, keep them. There are many who long for them. Give them away to such persons.'"

What aspects of the relationship between the sufis and the state do you think are best illustrated in this account? What does the account tell us about the modes of communication between the Shaikh and his disciples?
Fig. 6.15
The dargah of Shaikh Salim Chishti, a direct descendant of Baba Farid, constructed in Fatehpur Sikri, Akbar's capital, symbolised the bond between the Chishtis and the Mughal state.

6. NEW DEVOTIONAL PATHS
DIALOGUE AND DISSENT IN NORTHERN INDIA

Many poet-saints engaged in explicit and implicit dialogue with these new social situations, ideas and institutions. Let us now see how this dialogue found expression. We focus here on three of the most influential figures of the time.

6.1 Weaving a divine fabric: Kabir

Kabir (c. fourteenth-fifteenth centuries) is perhaps one of the most outstanding examples of a poet-saint who emerged within this context. Historians have painstakingly tried to reconstruct his life and times through a study of compositions attributed to him as well as later hagiographies. Such exercises have proved to be challenging on a number of counts.

Verses ascribed to Kabir have been compiled in three distinct but overlapping traditions. The *Kabir Bijak* is preserved by the Kabirpanth (the path or sect of Kabir) in Varanasi and elsewhere in Uttar Pradesh; the *Kabir Granthavali* is associated with the Dadupanth in Rajasthan, and many of his compositions are found in the *Adi Granth Sahib* (see Section 8.2). All these manuscript compilations were made long after the death of Kabir. By the nineteenth century, anthologies of verses attributed to him circulated in print in regions as far apart as Bengal, Gujarat and Maharashtra.

Kabir's poems have survived in several languages and dialects, and some are composed in the special language of *nirguna* poets, the *sant bhasha*. Others, known as *ulatbansi* (upside-down sayings), are written in a form in which everyday meanings are inverted. These hint at the difficulties of capturing the nature of the Ultimate Reality in words: expressions such as "the lotus which blooms without flower" or the "fire raging in the ocean" convey a sense of Kabir's mystical experiences.

Also striking is the range of traditions Kabir drew on to describe the Ultimate Reality. These include Islam: he described the Ultimate Reality as Allah, Khuda, Hazrat and Pir. He also used terms drawn from Vedantic traditions, alakh (the unseen), nirakar (formless), Brahman, Atman, etc. Other terms with mystical connotations such as shabda (sound) or shunya (emptiness) were drawn from yogic traditions.

The One Lord

These are compositions attributed to Kabir:

Tell me, brother, how can there be

No one lord of the world but one?

Who taught you all this?

God is called by many names:

Names like Allah, Ram, Karim, Keshav, Hari, and Hazrat.

Gold may be shaped into rings and bangles.

Isn't gold all the same?

Distinctions are only words we invent.

Kabir says they are both mistaken.

Neither can find the only Ram. One kills the goat, the other cows.

They waste their lives in disputation.

❯ What is Kabir's argument against the distinction made between gods of different communities?

Diverse and sometimes conflicting ideas are expressed in these poems. Some poems draw on Islamic ideas and use monotheism and iconoclasm to attack Hindu polytheism and idol worship; others use the sufi concept of zikr and ishq (love) to express the Hindu practice of nam-simaran (remembrance of God's name).

Were all these composed by Kabir? We may never be able to tell with certainty, although scholars have tried to analyse the language, style and content to establish which verses could be Kabir's. What this rich corpus of verses also signifies is that Kabir was and is to the present a source of inspiration for those who questioned entrenched religious and social institutions, ideas and practices in their search for the Divine.

Fig. 6.10
Seated musicians, a seventeenth century Mughal painting.
It is likely that the compositions of the sants were sung by such musicians.

Just as Kabir's ideas probably crystallised through dialogue and debate (explicit or implicit) with the traditions of sufis and yogis in the region of Awadh (part of present-day Uttar Pradesh), his legacy was claimed by several groups, who remembered him and continue to do so.

This is most evident in later debates about whether he was a Hindu or a Muslim by birth, debates that are reflected in hagiographies. Many of these were composed from the seventeenth century onwards, about 200 years after Kabir's lifetime.

Hagiographies within the Vaishnava tradition attempted to suggest that he was born a Hindu. Kabirdas (Kabir itself is an Arabic word meaning "great"), but was raised by a poor Muslim family belonging to the community of weavers or julahas, who were relatively recent converts to Islam. They also suggested that he was initiated into bhakti by a guru, perhaps Ramananda.

However, the verses attributed to Kabir use the words guru and satguru, but do not mention the name of any specific preceptor. Historians have pointed out that it is very difficult to establish that Ramananda and Kabir were contemporaries, without assigning improbably long lives to either or both. So, while traditions linking the two cannot be accepted at face value, they show how important the legacy of Kabir was for later generations.

8.2 Baba Guru Nanak and the Sacred Word

Baba Guru Nanak (1469-1539) was born in a Hindu merchant family in a village called Nankana Sahib near the river Ravi in the predominantly Muslim Punjab. He trained to be an accountant and studied Persian. He was married at a young age but he spent most of his time among sufis and bhaktas. He also travelled widely.

The message of Baba Guru Nanak is spelt out in his hymns and teachings. These suggest that he advocated a form of nirguna bhakti. He firmly repudiated the external practices of the religions he saw around him. He rejected sacrifices, ritual baths, image worship, austerities and the scriptures of both Hindus and Muslims. For Baba Guru Nanak, the Absolute or "rab" had no gender or form. He proposed a simple way to connect to the Divine by remembering and repeating the Divine Name, expressing his ideas through hymns called 'shabad' in Punjabi, the language of the region. Baba Guru Nanak would sing these compositions in various ragas while his attendant Mardana played the rabab.

Baba Guru Nanak organised his followers into a community. He set up rules for congregational worship (sangat) involving collective recitation. He appointed one of his disciples, Angad, to succeed him as the preceptor (guru), and this practice was followed for nearly 200 years.

It appears that Baba Guru Nanak did not wish to establish a new religion, but after his death his followers consolidated their own practices and distinguished themselves from both Hindus and Muslims. The fifth preceptor, Guru Arjan, compiled Baba Guru Nanak's hymns along with those of his four successors and other religious poets like Baba Farid, Ravidas (also known as Raidas) and Kabir in the Adi Granth Sahib. These hymns, called 'gurbani', are composed in various

languages. In the late seventeenth century the tenth preceptor, Guru Gobind Singh, included the compositions of the ninth guru, Guru Tegh Bahadur, and this scripture was called the *Guru Granth Sahib*. Guru Gobind Singh also laid the foundation of the Khalsa Panth (army of the pure) and defined its five symbols: uncut hair, a dagger, a pair of shorts, a comb and a steel bangle. Under him the community got consolidated as a socio-religious and military force.

8.3 Mirabai, the devotee princess

Mirabai (c. fifteenth-sixteenth centuries) is perhaps the best-known woman poet within the bhakti tradition. Biographies have been reconstructed primarily from the *bhajans* attributed to her, which were transmitted orally for centuries. According to these, she was a Rajput princess from Merta in Marwar who was married against her wishes to a prince of the Sisodia clan of Mewar, Rajasthan. She defied her husband and did not submit to the traditional role of wife and mother, instead recognising Krishna, the avatar of Vishnu, as her lover. Her in-laws tried to poison her, but she escaped from the palace to live as a wandering singer composing songs that are characterised by intense expressions of emotion.

Fig. 6.12
A fifteenth-century stone sculpture from India depicting Krishna playing the flute, a form of the deity worshipped by Mirabai

Source 11

> ## Love for the Lord
>
> This is part of a song attributed to Mirabai:
> I will build a funeral pyre of sandalwood and aloe
> Light it by your own hand
> When I am burned away to cinders
> Smear this ash upon your limbs
> ... let flame be lost in flame
>
> In another verse, she sings:
> "What can Mewar's ruler do to me?
> If God is angry, all is lost,
> But what can the Rana do?"
>
> ➤ What does this indicate about Mirabai's attitude towards the king?

According to some traditions, her preceptor was Raidas, a leather worker. This would indicate her defiance of the norms of caste society. After rejecting the comforts of her husband's palace, she is supposed to have donned the white robes of a widow or the saffron robe of the renouncer.

Although Mirabai did not attract a sect or group of followers, she has been recognised as a source of inspiration for centuries. Her songs continue to be sung by women and men, especially those who are poor and considered "low caste" in Gujarat and Rajasthan.

Discuss...

Why do you think the traditions of Kabir, Baba Guru Nanak and Mirabai remain significant in the twenty-first century?

9. RECONSTRUCTING HISTORIES OF RELIGIOUS TRADITIONS

We have seen that historians draw on a variety of sources to reconstruct histories of religious traditions – these include sculpture, architecture, stories about religious preceptors, compositions attributed to women and men engaged in the quest of understanding the nature of the Divine.

As we have seen in Chapters 1 and 4, sculpture and architecture can only be understood if we have a grasp of the context – the ideas, beliefs and practices of those who produced and used these images and buildings. What about textual traditions regarding religious beliefs? If you return to the sources in this chapter, you will notice that they include a wide variety, written in several different languages and styles. They range from the apparently simple, direct language of the pachamas of Basavanna to the ornate Persian of the farman of the Mughal emperors. Understanding each type of text requires different skills; apart from a familiarity with several languages, the historian has to be aware of the subtle variations in style that characterise each genre.

Shankaradeva

In the late fifteenth century, Shankaradeva emerged as one of the leading proponents of Vaishnavism in Assam. His teachings, often known as the Bhagavati Dharma because they were based on the *Bhagavad Gita* and the *Bhagavata Purana*, focused on devotion to Vishnu. He emphasised the need for constant recitation of the names of the lord in sang or congregations of pious devotees. He also encouraged the establishment of satra or monasteries for the transmission of spiritual knowledge, and naam ghar or prayer halls. Many of these institutions and practices continue to flourish in the region. His major compositions include the Kirtanaghosha.

Varieties of sources used to reconstruct the history of sufi traditions

A wide range of texts were produced in and around sufi khanqahs. These included:

1. Treatises or manuals dealing with sufi thought and practices – The *Kashful Mahjub* of Ali bin Usman Hujwiri (died c. 1071) is an example of this genre. It enables historians to see how traditions outside the subcontinent influenced sufi thought in India.

2. *Malfuz* (literally "uttered") conversations of sufi saints – An early text on *malfuzat* is the *Fawa'id-al-Fu'ad*, a collection of conversations of Shaikh Nizamuddin Auliya, compiled by Amir Hasan Sijzi Dehlavi, a noted Persian poet. Source 6 contains an excerpt from this text. Malfuzat were compiled by different sufi silsilas with the permission of the shaikhs; these had obvious didactic purposes. Several examples have been found from different parts of the subcontinent, including the Deccan. They were compiled over several centuries.

3. *Maktubat* (literally "written") collections of letters) letters written by sufi masters, addressed to their disciples and associates – While these tell us about the shaikh's experience of religious truth that he wanted to share with others, they also reflect the life conditions of the recipients and are responses to their aspirations and difficulties, both spiritual and mundane. The letters known as *Maktubat-i Imam Rabbani* of the noted seventeenth-century Naqshbandi Shaikh Ahmad Sirhindi (d.1624), whose ideology is often contrasted with the liberal and non-sectarian views of Akbar, are amongst those most frequently discussed by scholars.

4. *Tazkira* (literally "to mention and memorialise") biographical accounts of saints – The fourteenth-century *Siyar-ul Auliya* of Mir Khwurd Kirmani was the first sufi tazkira written in India. It dealt principally with the Chishti saints. The most famous tazkira is the *Akhbar-ul-Akhyar* of Abdul Haqq Muhaddis Dehlavi (d. 1642). The authors of the tazkiras often sought to establish the precedence of their own orders and glorify their spiritual genealogies. Many details are often implausible, full of elements of the fantastic. Still they are of great value for historians and help them to understand more fully the nature of the tradition.

Remember that each of the traditions we have been considering in this chapter generated a wide range of textual and oral modes of communication, some of which have been preserved, many of which have been modified in the process of transmission, and others are probably lost forever.

Virtually all these religious traditions continue to flourish to date. This community has certain advantages for historians as it allows them to compare contemporary practices with those described in textual traditions or shown in old paintings, and to trace changes. At the same time, because these traditions are part of peoples' lived beliefs and practices, there is often a lack of acceptance of the possibility that these may have changed over time. The challenge for historians is to undertake such investigations with sensitivity, while at the same time recognising that religious traditions, like other traditions, are dynamic and change over time.

TIMELINE
SOME MAJOR RELIGIOUS TEACHERS IN THE SUBCONTINENT

c. 500-800 ce	Appar, Sambandar, Sundaramurti in Tamil Nadu
c. 800-900	Nammalvar, Manikkavachakar, Andal, Tondaradippodi in Tamil Nadu
c. 1000-1100	Al Hujwiri, Data Ganj Bakhsh in the Punjab; Ramanujacharya in Tamil Nadu
c. 1100-1200	Basavanna in Karnataka
c. 1200-1300	Jnanadeva, Muktabai in Maharashtra; Khwaja Moinuddin Chishti in Rajasthan; Bahauddin Zakariyya and Fariduddin Ganj-i Shakar in the Punjab; Qutbuddin Bakhtiyar Kaki in Delhi
c. 1300-1400	Lal Ded in Kashmir; Lal Shahbaz Qalandar in Sind; Nizamuddin Auliya in Delhi; Ramananda in Uttar Pradesh; Chokhamela in Maharashtra; Sharafuddin Yahya Maneri in Bihar
c. 1400-1500	Kabir, Raidas, Surdas in Uttar Pradesh; Baba Guru Nanak in the Punjab; Vallabhacharya in Gujarat; Abdullah Shattari in Gwalior; Mohammad Shah Alam in Gujarat; Mir Sayyid Muhammad Gesu Daraz in Gulburga; Shankaradeva in Assam; Tukaram in Maharashtra
c. 1500-1600	Sri Chaitanya in Bengal; Mirabai in Rajasthan; Shaikh Abdul Quddus Gangohi, Malik Muhammad Jaisi, Tulsidas in Uttar Pradesh
c. 1600-1700	Shaikh Ahmad Sirhindi in Haryana; Miyan Mir in the Punjab

Note: These are *dates* indicate the approximate period during which these teachers lived.

ANSWER IN 100-150 WORDS

1. Explain with examples what historians mean by the integration of cults.

2. To what extent do you think the architecture of mosques in the subcontinent reflects a combination of universal ideals and local traditions?

3. What were the similarities and differences between the be-shari'a and ba-shari'a sufi traditions?

4. Discuss the ways in which the Alvars, Nayanars and Virashaivas expressed critiques of the caste system.

5. Describe the major teachings of either Kabir or Baba Guru Nanak, and the ways in which these have been transmitted.

WRITE A SHORT ESSAY (ABOUT 250-500 WORDS) ON THE FOLLOWING:

6. Discuss the major beliefs and practices that characterised sufism.

7. Examine how and why rulers tried to establish connections with the traditions of the Nayanars and the sufis.

8. Analyse, with illustrations, why bhakti and sufi thinkers adopted a variety of languages in which to express their opinions.

9. Read any five of the sources included in this chapter and discuss the social and religious ideas that are expressed in them.

MAP WORK

10. On an outline map of India, plot three major sufi shrines, and three places associated with temples from each of a form of Vishnu, Shiva and the goddess.

✏ PROJECTS (CHOOSE ONE)

11. Choose any two of the religious teachers/thinkers/saints mentioned in this chapter, and find out more about their lives and teachings. Prepare a report about the area and the times in which they lived, their major ideas, how we know about them, and why you think they are important.

12. Find out more about practices of pilgrimage associated with the shrines mentioned in this chapter. Are these pilgrimages still undertaken? When are these shrines visited? Who visits these shrines? Why do they do so? What are the activities associated with these pilgrimages?

AN IMPERIAL CAPITAL
VIJAYANAGARA
(C. FOURTEENTH TO SIXTEENTH CENTURY)

Vijayanagara or "city of victory" was the name of both a city and an empire. The empire was founded in the fourteenth century. In its heyday it stretched from the river Krishna in the north to the extreme south of the peninsula. In 1565 the city was sacked and subsequently deserted. Although it fell into ruin in the seventeenth-eighteenth centuries, it lived on in the memories of people living in the Krishna-Tungabhadra doab. They remembered it as Hampi, a name derived from that of the local mother goddess, Pampadevi. These local traditions combined with archaeological finds, monuments and inscriptions and other records helped scholars to rediscover the Vijayanagara Empire.

Fig. 7.1
A part of the stone wall that was built around the city of Vijayanagara

1. THE DISCOVERY OF HAMPI

The ruins at Hampi were brought to light in 1800 by an engineer and antiquarian named Colonel Colin Mackenzie. An employee of the English East India Company, he prepared the first survey map of the site. Much of the initial information he received was based on the memories of priests of the Virupaksha temple and the shrine of Pampadevi. Subsequently, from 1856, photographers began to record the monuments which enabled scholars to study them. As early as 1836 epigraphists began collecting several dozen inscriptions found at this and other temples at Hampi. In an effort to reconstruct the history of the city and the empire, historians collated information from these sources with accounts of foreign travellers and other literature written in Telugu, Kannada, Tamil and Sanskrit.

Source 1

Colin Mackenzie

Born in 1754, Colin Mackenzie became famous as an engineer, surveyor and cartographer. In 1815 he was appointed the first Surveyor General of India, a post he held till his death in 1821. He embarked on collecting local histories and surveying historic sites in order to better understand India's past and make governance of the colony easier. He felt that "it struggled long under the miseries of bad management ... before the South came under the benign influence of the British government." By studying Vijayanagara, Mackenzie believed that the East India Company could gain "much useful information on many of these institutions, laws and customs whose influence still prevails among the various tribes of Natives forming the general mass of the population to this day".

Fig. 7.1
Mackenzie and his assistants
This is a copy by an unknown artist of an oil painting by the portrait painter Thomas Hickey. It dates to c.1825 and belongs to the collection of the Royal Asiatic Society of Britain and Ireland. On Mackenzie's left at his feet Anantali holding a telescope; on the right are Brahmana assistants; a clerk stands (right) and behind him the Telugu interpreter Cavelly Venkata Lechmiah.

❧ How has the artist portrayed Mackenzie and his Indigenous informers? What ideas about him and his informants are sought to be impressed upon the viewer?

2. Rayas, Nayakas and Sultans

According to tradition and epigraphic evidence two brothers, Harihara and Bukka, founded the Vijayanagara Empire in 1336. This empire included within its fluctuating frontiers peoples who spoke different languages and followed different religious traditions.

On their northern frontier, the Vijayanagara kings competed with contemporary rulers – including the Sultans of the Deccan and the Gajapati rulers of Orissa – for control of the fertile river valleys and the resources generated by lucrative overseas trade. At the same time, interaction between these states led to sharing of ideas, especially in the field of architecture. The rulers of Vijayanagara borrowed concepts and building techniques which they then developed further.

> ### Karnataka samrajyamu
> While historians use the term Vijayanagara Empire, contemporaries described it as the Karnataka samrajyamu.

Fig. 7.3
The gopuram or gateway of the Brihadishvara temple at Thanjavur.

Elephants, horses and men

Gajapati literally means lord of elephants. This was the name of a ruling lineage that was very powerful in Orissa in the fifteenth century. In the popular traditions of Vijayanagara the Deccan Sultans are termed as *ashvapati* or lord of horses and the rayas are called *narapati* or lord of men.

Some of the areas that were incorporated within the empire had witnessed the development of powerful states such as those of the Cholas in Tamil Nadu and the Hoysalas in Karnataka. Ruling elites in these areas had extended patronage to elaborate temples such as the Brihadishvara temple at Thanjavur and the Chennakeshava temple at Belur. The rulers of Vijayanagara, who called themselves rayas, built on these traditions and carried them, as we will see, literally to new heights.

2.1 Kings and traders

As warfare during these times depended upon effective cavalry, the import of horses from Arabia and Central Asia was very important for rival kingdoms. This trade was initially controlled by Arab traders. Local communities of merchants known as kudirai chettis or horse merchants also participated in these exchanges. From 1498 other actors appeared on the scene. These were the Portuguese, who arrived on the west coast of the subcontinent and attempted to establish trading and military stations. Their superior military technology, especially the use of muskets, enabled them to become important players in the tangled politics of the period.

In fact, Vijayanagara was also noted for its markets dealing in spices, textiles and precious stones. Trade was often regarded as a status symbol for such cities, which boasted of a wealthy population that demanded high-value exotic goods, especially precious stones and jewellery. The revenue derived

from trade in turn contributed significantly to the prosperity of the state.

2.2 The apogee and decline of the empire

Within the polity, claimants to power included members of the ruling lineage as well as military commanders. The first dynasty, known as the Sangama dynasty, exercised control till 1485. They were supplanted by the Saluvas, military commanders, who remained in power till 1503 when they were replaced by the Tuluvas. Krishnadeva Raya belonged to the Tuluva dynasty.

Krishnadeva Raya's rule was characterised by expansion and consolidation. This was the time when the land between the Tungabhadra and Krishna rivers (the Raichur doab) was acquired (1512), the rulers of Orissa were subdued (1514) and severe defeats were inflicted on the Sultan of Bijapur (1520). Although the kingdom remained in a constant state of military preparedness, it flourished under conditions of unparalleled peace and prosperity. Krishnadeva Raya is credited with building some fine temples and adding impressive gopurams to many important south Indian temples. He also founded a suburban township near Vijayanagara called Nagalapuram after his mother. Some of the most detailed descriptions of Vijayanagara come from his time or just after.

Strain began to show within the imperial structure following Krishnadeva Raya's death in 1529. His successors were troubled by rebellious nayakas or military chiefs. By 1542 control at the centre had shifted to another ruling lineage, that of the Aravidu, which remained in power till the end of the seventeenth century. During this period, as indeed earlier, the military ambitions of the rulers of Vijayanagara as well as those of the Deccan Sultanates resulted in shifting alignments. Eventually this led to an alliance of the Sultanates against Vijayanagara. In 1565 Rama Raya, the chief minister of Vijayanagara, led the army into battle at Rakshasi-Tangadi (also known as Talikota), where his forces were routed by the combined armies of Bijapur, Ahmadnagar and Golconda. The victorious armies sacked the city of Vijayanagara. The city was totally abandoned within a few years. Now the focus of the empire shifted to the east where the Aravidu

Kings and traders

Krishnadeva Raya (ruled 1509-29), the most famous ruler of Vijayanagara, composed a work on statecraft in Telugu known as the Amuktamalyada. About traders he wrote:

A king should improve the harbours of his country and so encourage its commerce that horses, elephants, precious gems, sandalwood, pearls and other articles are freely imported ... He should arrange that the foreign sailors who land in his country on account of storms, illness and exhaustion are looked after in a manner suitable ... Make the merchants of distant foreign countries who import elephants and good horses be attached to yourself by providing them with daily audience, presents and allowing decent profits. Then those articles will never go to your enemies.

> Why do you think the king was interested in encouraging trade? Which groups of people would have benefited from these importations?

➔ Identify the present-day states that formed part of the empire.

Yavana is a Sanskrit word used for the Greeks and other peoples who entered the subcontinent from the northwest.

dynasty ruled from Penukonda and later from Chandragiri (near Tirupati).

Although the armies of the Sultans were responsible for the destruction of the city of Vijayanagara, relations between the Sultans and the rayas were not always or invariably hostile. In spite of religious differences, Krishnadeva Raya, for example, supported some claimants to power in the Sultanates and took pride in the title "establisher of the Yavana kingdom". Similarly, the Sultan of Bijapur intervened to resolve succession disputes in Vijayanagara following the death of Krishnadeva Raya. In fact the Vijayanagara kings were keen to ensure the stability of the Sultanates and vice versa. It was the adventurous policy of Rama Raya who tried to play off one Sultan against another that led the Sultans to combine together and decisively defeat him.

2.3 The rayas and the nayakas

Among those who exercised power in the empire were military chiefs who usually controlled forts and had armed supporters. These chiefs often moved from one area to another, and in many cases were accompanied by peasants looking for fertile land on which to settle. These chiefs were known as nayakas and they usually spoke Telugu or Kannada. Many nayakas submitted to the authority of the kings of Vijayanagara but they often rebelled and had to be subdued by military action.

The amara-nayaka system was a major political innovation of the Vijayanagara Empire. It is likely that many features of this system were derived from the iqta system of the Delhi Sultanate.

The amara-nayakas were military commanders who were given territories to govern by the raya. They collected taxes and other dues from peasants, craftspersons and traders in the area. They retained part of the revenue for personal use and for maintaining a stipulated contingent of horses and elephants. These contingents provided the Vijayanagara kings with an effective fighting force with which they brought the entire southern peninsula under their control. Some of the revenue was also used for the maintenance of temples and irrigation works.

The amara-nayakas sent tribute to the king annually and personally appeared in the royal court with gifts to express their loyalty. Kings occasionally asserted their control over them by transferring them from one place to another. However, during the course of the seventeenth century, many of these nayakas established independent kingdoms. This hastened the collapse of the central imperial structure.

Amara is believed to be derived from the Sanskrit word *samara*, meaning battle or war. It also resembles the Persian term *amir*, meaning a high noble.

3. VIJAYANAGARA

THE CAPITAL AND ITS ENVIRONS

Like most capitals, Vijayanagara, was characterised by a distinctive physical layout and building style.

Fig. 7.4
Plan of Vijayanagara

> Identify three major zones on the plan. Look at the central part. Can you see channels connecting up with the river? See how many fortification walls you can trace. Was the sacred centre fortified?

Source 1

Finding out about the city

A large number of inscriptions of the kings of Vijayanagara and their nayakas recording donations to temples as well as describing important events have been recovered. Several travellers visited the city and wrote about it. Notable among their accounts are those of an Italian trader named Nicolo de Conti, an ambassador named Abdul Razzaq sent by the ruler of Persia, a merchant named Afanasii Nikitin from Russia, all of whom visited the city in the fifteenth century, and those of Duarte Barbosa, Domingo Paes and Fernao Nuniz from Portugal, who came in the sixteenth century.

> Would you find these features in a city today? Why do you think the gardens and water bodies were selected for special mention by Paes?

A sprawling city

This is an excerpt from Domingo Paes's description of Vijayanagara:

The size of this city I do not write here, because it cannot all be seen from any one spot, but I climbed a hill whence I could see a great part of it. I could not see it all because it lies between several ranges of hills. What I saw from thence seemed to me as large as Rome, and very beautiful to the sight; there are many groves of trees within it, in the gardens of the houses, and many conduits of water which flow into the midst of it, and in places there are lakes; and the king has close to his palace a palm-grove and other rich fruit-bearing trees.

3.1 Water resources

The most striking feature about the location of Vijayanagara is the natural basin formed by the river Tungabhadra which flows in a north-easterly direction. The surrounding landscape is characterised by stunning granite hills that seem to form a girdle around the city. A number of streams flow down to the river from these rocky outcrops.

In almost all cases embankments were built along these streams to create reservoirs of varying sizes. As this is one of the most arid zones of the peninsula, elaborate arrangements had to be made to store rainwater and conduct it to the city. The most important such tank was built in the early years of the fifteenth century and is now called Kamalapuram tank. Water from this tank not only irrigated fields nearby but was also conducted through a channel to the "royal centre".

One of the most prominent waterworks to be seen among the ruins is the Hiriya canal. This canal drew water from a dam across the Tungabhadra and irrigated the cultivated valley that separated the "sacred centre" from the "urban core". This was apparently built by kings of the Sangama dynasty.

3.2 Fortifications and roads

Before we examine the different parts of the city in detail let us look at what enclosed them all – the great fortress walls. Abdur Razzaq, an ambassador sent by the ruler of Persia to Calicut (present-day Kozhikode) in the fifteenth century, was greatly impressed by the fortifications, and mentioned seven lines of forts. These encircled not only the city but also the agricultural hinterland and forests. The outermost wall linked the hills surrounding the city. The massive masonry construction was slightly tapered. No mortar or cementing agent was employed anywhere in the construction. The stone blocks were wedge shaped, which held them in place, and the inner portions of the walls were of earth packed with rubble. Square or rectangular bastions projected outwards.

What was most significant about this fortification is that it enclosed agricultural tracts. Abdur Razzaq noted that "between the first, second and the third walls there are cultivated fields, gardens and houses". Anil Paes observed: "From this first circuit until you

How tanks were built

About a tank constructed by Krishnadeva Raya Paes wrote:

The king made a tank ... at the mouth of two hills so that all the water which comes from either one side or the other collects there; and besides this water comes to it from more than three leagues (approximately 15 kilometres) by pipes which run along the lower part of the range outside. This water is brought from a lake which itself overflows into a little river. The tank has three large pillars handsomely carved with figures; these connect above with certain pipes by which they get water when they have to irrigate their gardens and rice-fields. In order to make this tank the said king broke down a hill ... In the tank I saw so many people at work that there must have been fifteen or twenty thousand men, looking like ants ...

Fig. 7.7
A gopuram

enter the city there is a great distance, in which are fields in which they sow rice and have many gardens and much water, in which water comes from two lakes." These statements have been corroborated by present-day archaeologists, who have also found evidence of an agricultural tract between the sacred centre and the urban core. This tract was serviced by an elaborate canal system drawing water from the Tungabhadra.

Why do you think agricultural tracts were incorporated within the fortified area? Often, the objective of medieval sieges was to starve the defenders into submission. These sieges could last for several months and sometimes even years. Normally rulers tried to be prepared for such situations by building large granaries within fortified areas. The rulers of Vijayanagara adopted a more expensive and elaborate strategy of protecting the agricultural belt itself.

A second line of fortification went round the inner core of the urban complex, and a third line surrounded the royal centre, within which each set of major buildings was surrounded by its own high walls.

The fort was entered through well-guarded gates, which linked the city to the major roads. Gateways were distinctive architectural features that often defined the structures to which they regulated access. The arch on the gateway leading into the fortified settlement as well as the dome over the gate (Fig. 7.6) are regarded as typical features of the architecture introduced by the Turkish Sultans. Art historians refer to this style as Indo-Islamic, as it grew continually through interaction with local building practices in different regions.

Archaeologists have studied roads within the city and those leading out from it. These have been identified by tracing paths through gateways, as well as by finds of pavements. Roads generally wound around through the valleys, avoiding rocky terrain. Some of the most important roads extended from temple gateways, and were lined by bazaars.

3.3 The urban core

Moving along the roads leading into the urban core, there is relatively little archaeological evidence of the houses of ordinary people. Archaeologists have

found fine Chinese porcelain in some areas, including in the north-eastern corner of the urban core and suggest that these areas may have been occupied by rich traders. This was also the Muslim residential quarter. Tombs and mosques located here have distinctive forms, yet their architecture resembles that of the mandapas found in the temples of Hampi.

This is how the sixteenth-century Portuguese traveller Barbosa described the houses of ordinary people, which have not survived: "The other houses of the people are thatched, but nonetheless well built and arranged according to occupations, in long streets with many open places."

Field surveys indicate that the entire area was dotted with numerous shrines and small temples, pointing to the prevalence of a variety of cults, perhaps supported by different communities. The surveys also indicate that wells, rainwater tanks as well as temple tanks may have served as sources of water to the ordinary town dwellers.

> ➤ Does the mosque have the typical features of Indo-Islamic architecture?

4. THE ROYAL CENTRE

The royal centre was located in the south-western part of the settlement. Although designated as a royal centre, it included over 60 temples. Clearly, the patronage of temples and cults was important for rulers who were trying to establish and legitimise their authority through association with the divinities housed in the shrines.

About thirty building complexes have been identified as palaces. These are relatively large structures that do not seem to have been associated

> ➤ DISCUSS...
> Compare the layout of Vijayanagara with that of your town or village.

A House of Victory?

This is what Paes had to say about the audience hall and the mahanavami dibba, which together he called the 'House of Victory'.

These buildings have two platforms one above the other, beautifully sculpted ... In the upper platform ... this House of Victory the king has a room made of cloth where the idol has a throne ... and in the other is the middle is placed a dais on which stands a throne of state, the crown and the royal anklet.

Fig. 7.11

> Can you identify the themes of the carvings?

with ritual functions. One difference between these structures and temples is that the latter were constructed entirely of masonry, while the superstructure of the secular buildings was made of perishable materials.

4.1 The mahanavami dibba

Some of the more distinctive structures in the area have been assigned names based on the form of the buildings as well as their functions. The "king's palace" is the largest of the enclosures but has not yielded definitive evidence of being a royal residence. It has two of the most impressive platforms, usually called the "audience hall" and the "mahanavami dibba". The entire complex is surrounded by high double walls with a street running between them. The audience hall is a high platform with slots for wooden pillars at close and regular intervals. It had a staircase going up to the second floor, which rested on these pillars. The pillars being closely spaced, would have left little free space and thus it is not clear what the hall was used for.
Located on one of the highest points in the city, the "mahanavami dibba" is a massive platform rising from a base of about 11,000 sq. ft to a height of 40 ft. There is evidence that it supported a wooden structure. The base of the platform is covered with relief carvings (Fig. 7.12).

Rituals associated with the structure probably coincided with Mahanavami (literally, the great ninth day) of the ten-day Hindu festival during the autumn months of September and October, known variously as Dussehra (northern India), Durga Puja (in Bengali

Compare Figs. 7.13 and 7.15, and make a list of the features that are common to both, as well as those that can be seen in only one. Also compare the arch in Fig. 7.14 with the arch in Fig. 7.5. The Lotus Mahal had nine towers – a high central one, and eight along the sides. How many can you see in the photograph and how many in the elevation? If you had to rename the Lotus Mahal, what would you call it?
and Navaratri or Mahanavami in particular today. The Vijayanagara kings displayed their prestige, power and suzerainty on this occasion.

The ceremonies performed on the occasion included worship of the image, worship of the state horse, and the sacrifice of buffaloes and other animals. Dances, wrestling matches, and processions of caparisoned horses, elephants and chariots and soldiers, as well as ritual presentations before the king and his guests by the chief nayakas and subordinate kings marked the occasion. These ceremonies were imbued with deep symbolic meanings. On the last day of the festival the king inspected his army and the armies of the nayakas in a grand ceremony in an open field. On this occasion the nayakas brought rich gifts for the king as well as the stipulated tribute.

Was the "mahanavami dibba" that stands today the centre of this elaborate ritual? Scholars have pointed out that the space surrounding the structure does not seem to have been adequate for elaborate processions of armed men, women, and large numbers of animals. Like some of the other structures in the royal centre, it remains an enigma.

4.2 Other buildings in the royal centre

One of the most beautiful buildings in the royal centre is the Lotus Mahal, so named by British travellers in the nineteenth century. While the name is certainly romantic, historians are not quite sure

Fig. 7.15
A photograph of the Lotus Mahal

what the building was used for. One suggestion, found in a map drawn by Mackenzie, is that it may have been a council chamber, a place where the king met his advisers.

While most temples were located in the sacred centre, there were several in the royal centre as well.

> ◉ Compare Figs. 7.16 a and 7.16 b with Fig. 7.17, making a list of features visible in each one. Do you think these were actually elephant stables?

5. THE SACRED CENTRE

5.1 Choosing a capital

We now move to the rocky northern end of the city on the banks of the Tungabhadra. According to local tradition, these hills sheltered the monkey kingdom of Vali and Sugriva mentioned in the Ramayana. Other traditions suggest that Pampadevi, the local mother goddess, did penance in these hills in order to marry Virupaksha, the guardian deity of the kingdom, also recognised as a form of Shiva. To this day this marriage is celebrated annually in the Virupaksha temple. Among these hills are found Jaina temples of the pre-Vijayanagara period as well. In other words, this area was associated with several sacred traditions.

Temple building in the region had a long history, going back to dynasties such as the Pallavas, Chalukyas, Hoysalas and Cholas. Rulers very often encouraged temple building as a means of associating themselves with the divine – often, the deity was explicitly or implicitly identified with the king. Temples also functioned as centres of learning. Besides, rulers and others often granted land and other resources for the maintenance of temples. Consequently, temples developed as significant religious, social, cultural and economic centres. From the point of view of the rulers, constructing, repairing and maintaining temples were important means of winning support and recognition for their power, wealth and piety.

It is likely that the very choice of the site of Vijayanagara was inspired by the existence of the shrines of Virupaksha and Pampadevi. In fact the Vijayanagara kings claimed to rule on behalf of the god Virupaksha. All royal orders were signed "Shri Virupaksha", usually in the Kannada script. Rulers also indicated their close links with the gods by using the title "Hindu Suratrana". This was a Sanskritisation of the Arabic term Sultan, meaning king, so it literally meant Hindu Sultan.

Even as they drew on earlier traditions, the rulers of Vijayanagara innovated and developed these. Royal portrait sculpture was now displayed in temples, and the king's visits to temples were treated as important state occasions on which he was accompanied by the important nayakas of the empire.

Fig. 7.20

Virupaksha temple

5.2. Gopurams and mandapas

In terms of temple architecture, by this period certain new features were in evidence. These included structures of immense scale that would have been a mark of imperial authority, best exemplified by the raya gopurams (Fig. 7.7) or royal gateways that often dwarfed the towers on the central shrines, and signalled the presence of the temple from a great

Fig. 7.21
A plan of the Virupaksha temple
Most of the square structures are shrines. The two major gateways are shaded in black. Each tiny dot represents a pillar. Rows of pillars arranged to form either a square or rectangular frame appear to demarcate major halls, pavilions and corridors.

☞ Using the scale in the plan, measure the distance from the main gopuram to the central shrine. What would have been the easiest access from the tank to the shrine?

◗ Describe what you see on the pillar.
distance. They were also probably meant as reminders of the power of kings, able to command the resources, techniques and skills needed to construct these towering gateways. Other distinctive features include mandapas or pavilions and long, pillared corridors that often ran around the shrines within the temple complex. Let us look at two temples more closely – the Virupaksha temple and the Vitthala temple.

The Virupaksha temple was built over centuries. While inscriptions suggest that the earliest shrine dated to the ninth-tenth centuries, it was substantially enlarged with the establishment of the Vijayanagara Empire. The hall in front of the main shrine was built by Krishnadeva Raya to mark his accession. This was decorated with delicately carved pillars. He is also credited with

the construction of the eastern gopuram. These additions meant that the central shrine came to occupy a relatively small part of the complex.

The halls in the temple were used for a variety of purposes. Some were spaces in which the images of gods were placed to witness special programmes of music, dance, drama, etc. Others were used to celebrate the marriages of deities, and yet others were meant for the deities to swing in. Special images, distinct from those kept in the small central shrine, were used on these occasions.

Fig. 7.34

⮕ Do you think chariots would have actually been built like this?

Fig. 7.35

Fig. 7.20
A gopuram built by the nayakas of Madurai

Another shrine, the Vitthala temple, is also interesting. Here, the principal deity was Vitthala, a form of Vishnu generally worshipped in Maharashtra. The introduction of the worship of the deity in Karnataka is another indication of the ways in which the rulers of Vijayanagara drew on different traditions to create an imperial culture. As in the case of other temples, this temple too has several halls and a unique shrine designed as a chariot (Fig. 7.24).

A characteristic feature of the temple complexes is the chariot streets that extended from the temple gopuram in a straight line. These streets were paved with stone slabs and lined with pillared pavilions in which merchants set up their shops.

Just as the nayakas continued with and elaborated on traditions of fortification, so they did with traditions of temple building. In fact, some of the most spectacular gopurams were also built by the local nayakas.

How and why did the rulers of Vijayanagara adopt and adapt earlier traditions of ritual architecture?

6. PLOTTING PALACES, TEMPLES AND BAZAARS

We have been examining a wealth of information on Vijayanagara – photographs, plans, elevations of structures and sculpture. How was all of this produced? After the initial surveys by Mackenzie, information was pieced together from travellers' accounts and inscriptions. Through the twentieth century, the site was preserved by the Archaeological Survey of India and the Karnataka Department of Archaeology and Museums. In 1976, Hampi was recognised as a site of national importance. Then, in the early 1980s, an important project was launched to document the material remains at Vijayanagara in detail, through extensive and intensive surveys, using a variety of recording techniques. Over nearly twenty years, dozens of

scholars from all over the world worked to compile and preserve this information.

Let us look at just one part of this enormous exercise – mapping – in more detail. The first step was to divide the entire area into a set of 25 squares, each designated by a letter of the alphabet. Then each of the small squares was subdivided into a set of even smaller squares. But this was not all: each of these smaller squares was further subdivided into yet smaller units.

As you can see, these detailed surveys have been extremely painstaking, and have recovered and documented traces of thousands of structures – from tiny shrines and residences to elaborate temples. They have also led to the recovery of traces of roads, paths, bazaars, etc.

The bazaar

Paes gives a vivid description of the bazaar:

> Going forward, you have a broad and beautiful street ... In this street live many merchants, and there you will find all sorts of rubies, and diamonds, and emeralds, and pearls, and seed-pearls, and cloths, and every other sort of thing there is on earth and that you may wish to buy. Then you have there every evening a fair where they sell many common horses and nags, and also many citrons, and limes, and oranges, and grapes, and every other kind of garden stuff, and wood; you have all in this street.

> More generally, he described the city as being "the best-provided city in the world" with the markets stocked with provisions such as rice, wheat, grains, India corn and a certain amount of barley and beans, moong, pulses and horse-gram" all of which were cheaply and abundantly available. According to Fernao Nuniz the Vijayanagara markets were "overflowing with abundance of fruits, grapes and oranges, limes, pomegranates, jackfruit and mangoes and all very cheap". Meat too was sold in abundance in the market-places. Nuniz described "mutton, pork, venison, partridges, hares, doves, quail and all kinds of birds, sparrows, rats and cats and lizards" as being sold in the market of Bisnaga (Vijayanagara).

7. Questions in Search of Answers

Buildings that survive tell us about the way spaces were organised and used, how they were built, with what materials and techniques. For example, we can assess the defence requirements and military preparedness of a city by studying its fortifications. Buildings also tell us about the spread of ideas and cultural influences if we compare them with buildings in other places. They convey ideas which the builders or their patrons wished to project. They are often suffused with symbols which are a product of their cultural context. These we can understand when we combine information from other sources like literature, inscriptions and popular traditions.

Krishnadeva Raya

To recapitulate about some of the problems of perspective, look at this beautiful statue of Krishnadeva Raya placed on the gopuram of the temple at Chidambaram, Tamil Nadu. This is obviously the way in which the ruler wanted to project himself.

And this is how Paes describes the king:

Of medium height, and of fair complexion and good figure, rather fat than thin, he has on his face signs of smallpox.

Fig. 7.31

Investigations of architectural features do not tell us what ordinary men, women and children, comprising the vast majority of the people who lived in the city and its outskirts, thought about these impressive buildings. Would they have had access to any of the areas within the royal centre or the sacred centre? Would they hurry past the sculpture, or would they pause to see, reflect and try and understand its complicated symbolism? And what did the people who worked on these colossal construction projects think of the enterprise to which they had contributed their labour?

While rulers took all important decisions about the buildings to be constructed, the site, the material to be used and the style to be followed, who possessed the specialised knowledge required for such enormous enterprises? Who drew up the plans for the buildings? Where did the masons, stonecutters, sculptors who did the actual building come from? Were they captured during war from neighbouring regions? What kind of wages did they get? Who supervised the building activity? How was building material transported and where did it come from? These are some of the questions that we cannot answer by merely looking at the buildings or their remains. Continuing research using other sources might provide some further clues.

TIMELINE 2
LANDMARKS IN THE DISCOVERY AND CONSERVATION OF VIJAYANAGARA

1800	Colin Mackenzie visits Vijayanagara.
1856	Alexander Greenlaw takes the first detailed photographs of archaeological remains at Hampi
1876	J.F. Fleet begins documenting the inscriptions on the temple walls at the site
1902	Conservation begins under John Marshall
1986	Hampi declared a World Heritage site by UNESCO
ANSWER IN 100-150 WORDS

1. What have been the methods used to study the ruins of Hampi over the last two centuries? In what way do you think they would have complemented the information provided by the priests of the Virupaksha temple?

2. How were the water requirements of Vijayanagara met?

3. What do you think were the advantages and disadvantages of enclosing agricultural land within the fortified area of the city?

4. What do you think was the significance of the rituals associated with the mahanavami dibba?

5. Fig. 7.33 is an illustration of another pillar from the Virupaksha temple. Do you notice any floral motifs? What are the animals shown? Why do you think they are depicted? Describe the human figures shown.

Fig. 7.33

WRITE A SHORT ESSAY (ABOUT 250-300 WORDS) ON THE FOLLOWING:

6. Discuss whether the term "royal centre" is an appropriate description for the part of the city for which it is used.

7. What does the architecture of buildings like the Lotus Mahal and elephant stables tell us about the rulers who commissioned them?

8. What are the architectural traditions that inspired the architects of Vijayanagara? How did they transform these traditions?

9. What impression of the lives of the ordinary people of Vijayanagara can you cull from the various descriptions in the chapter?

MAP WORK

10. On an outline map of the world, mark approximately Italy, Portugal, Iran and Russia. Trace the routes the travellers mentioned on p.175 would have taken to reach Vijayanagara.

PROJECT (CHOOSE ONE)

11. Find out more about any one of the major cities which flourished in the subcontinent during c. fourteenth-seventeenth centuries. Describe the architecture of the city. Are there any features to suggest that these were political centres? Are there buildings that were ritually significant? Is there an area for commercial activities? What are the features that distinguish the urban layout from that of surrounding areas?

12. Visit a religious building in your neighbourhood. Describe, with sketches, its roof, pillars and arches if any, corridors, passages, halls, entrance, water supply, etc. Compare these features with those of the Virupaksha temple. Describe what each part of the building is used for. Find out about its history.

Peasants, Zamindars and the State
Agrarian Society and the Mughal Empire
(c. sixteenth-seventeenth centuries)

Fig. 8.1
A rural scene
detail from a seventeenth century
Mughal painting

During the sixteenth and seventeenth centuries about 85 per cent of the population of India lived in its villages. Both peasants and landed elites were involved in agricultural production and claimed rights to a share of the produce. This created relationships of cooperation, competition and conflict among them. The sum of these agrarian relationships made up rural society.

At the same time agencies from outside also entered into the rural world. Most important among these was the Mughal state, which derived the bulk of its income from agricultural production. Agents of the state – revenue assessors, collectors, record keepers – sought to control rural society so as to ensure that cultivation took place and the state got its regular share of taxes from the produce. Since many crops were grown for sale, trade, money and markets entered the villages and linked the agricultural areas with the towns.

1. Peasants and Agricultural Production

The basic unit of agricultural society was the village, inhabited by peasants who performed the manifold seasonal tasks that made up agricultural production throughout the year – tilling the soil, sowing seeds, harvesting the crop when it was ripe. Further, they contributed their labour to the production of agro-based goods such as sugar and oil.

But rural India was not characterised by settled peasant production alone. Several kinds of areas such as large tracts of dry land or hilly regions were not cultivable in the same way as the more fertile

expanses of land. In addition, forest areas made up a substantial proportion of territory. We need to keep this varied topography in mind when discussing agrarian society.

1.1 Looking for sources

Our understanding of the workings of rural society does not come from those who worked the land, as peasants did not write about themselves. Our major source for the agrarian history of the sixteenth and early seventeenth centuries are chronicles and documents from the Mughal court (see also Chapter 9).

One of the most important chronicles was the Ain-i Akbari (in short the Ain, see also Section 3) authored by Akbar's court historian Abu'l Fazl. This text meticulously recorded the arrangements made by the state to ensure cultivation, to enable the collection of revenue by the agencies of the state and to regulate the relationship between the state and rural magnates, the zamindars.

The central purpose of the Ain was to present a vision of Akbar's empire where social harmony was provided by a strong ruling class. Any revolt or assertion of autonomous power against the Mughal state was, in the eyes of the author of the Ain, predestined to fail. In other words, whatever we learn from the Ain about peasants remains a view from the top.

Fortunately, however, the account of the Ain can be supplemented by descriptions contained in sources emanating from regions away from the Mughal capital. These include detailed revenue records from Gujarat, Maharashtra and Rajasthan dating from the seventeenth and eighteenth centuries. Further, the extensive records of the East India Company (see also Chapter 10) provide us with useful descriptions of agrarian relations in eastern India. All these sources record instances of conflicts between peasants, zamindars and the state. In the process they give us an insight into peasants' perception of and their expectations of fairness from the state.

1.2 Peasants and their lands

The term which Indo-Persian sources of the Mughal period most frequently used to denote a peasant was raiyat (plural, riaya) or muzarian. In addition, we also encounter the terms kisan or asami. Sources of the seventeenth century refer to two kinds of peasants – khud-kashta and pahi-kashta. The former

Source 1

Peasants on the move

1.3 Irrigation and technology

Source 2

Irrigating trees and fields

This is an excerpt from the *Babur Nama* that describes the irrigation devices the emperor observed in northern India:
The spread of tobacco

This plant, which arrived first in the Deccan, spread to northern India in the early years of the seventeenth century. The *Ain* does not mention tobacco in the list of crops in northern India. Akbar and his nobles came across tobacco for the first time in 1604. At this time smoking tobacco (in hookahs or chillums) seems to have caught on in a big way. Jahangir was so concerned about its addiction that he banned it. This was totally ineffective because by the end of the seventeenth century tobacco had become a major article of consumption, cultivation and trade all over India.

Agricultural prosperity and population growth

One important outcome of such varied and flexible forms of agricultural production was a slow demographic growth. Despite periodic disruptions caused by famines and epidemics, India's population increased, according to calculations by economic historians, by about 50 million people between 1600 and 1800, which is an increase of about 33 per cent over 200 years.

Irrigation projects received state support as well. For example, in northern India the state undertook digging of new canals (*nahr, nala*) and also repaired old ones like the *shahnahr* in the Punjab during Shah Jahan's reign.

Though agriculture was labour intensive, peasants did use technologies that often harnessed cattle energy. One example was the wooden plough, which was light and easily assembled with an iron tip or coulter. It therefore did not make deep furrows, which preserved the moisture better during the intensely hot months. A drill, pulled by a pair of giant oxen, was used to plant seeds, but broadcasting of seed was the most prevalent method. Hoeing and weeding were done simultaneously using a narrow iron blade with a small wooden handle.

1.4 An abundance of crops

Agriculture was organised around two major seasonal cycles, the *kharif* (autumn) and the *rabi* (spring). This would mean that most regions, except those terrains that were the most arid or inhospitable, produced a minimum of two crops a year (*do-fasla*), whereas some, where rainfall or irrigation assured a continuous supply of water, even gave three crops. This ensured an enormous variety of produce. For instance, we are told in the *Ain* that the Mughal provinces of Agra produced 39 varieties of crops and Delhi produced 43 over the two seasons. Bengal produced 50 varieties of rice alone.

However, the focus on the cultivation of basic staples did not mean that agriculture in medieval India was only for subsistence. We often come across the term *jins-i kamil* (literally, perfect crops) in our sources. The Mughal state also encouraged peasants to cultivate such crops as they brought in more revenue. Crops such as cotton and sugarcane were *jins-i kamil par excellence*. Cotton was grown over a great swathe of territory spread over central India and the Deccan plateau, whereas Bengal was famous for its sugar. Such cash crops would also include various sorts of oilseeds (for example, mustard) and lentils. This shows how subsistence and commercial production were closely intertwined in an average peasant's holding.

During the seventeenth century several new crops from different parts of the world reached the Indian

subcontinent. Maize (makka), for example, was introduced into India via Africa and Spain and by the seventeenth century it was being listed as one of the major crops of western India. Vegetables like tomatoes, potatoes and chillies were introduced from the New World at this time, as were fruits like the pineapple and the papaya.

2. THE VILLAGE COMMUNITY

The above account makes it clear that agricultural production involved the intensive participation and initiative of the peasantry. How did this affect the structure of agrarian relations in Mughal society? To find out, let us look at the social groups involved in agricultural expansion, and at their relationships and conflicts.

We have seen that peasants held their lands in individual ownership. At the same time they belonged to a collective village community as far as many aspects of their social existence were concerned. There were three constituents of this community – the cultivators, the panchayat, and the village headman (muqaddam or mandal).

2.1 Caste and the rural milieu

Deep inequities on the basis of caste and other caste-like distinctions meant that the cultivators were a highly heterogeneous group. Among those who tilled the land, there was a sizeable number who worked as menials or agricultural labourers (majur).

Despite the abundance of cultivable land, certain caste groups were assigned menial tasks and thus relegated to poverty. Though there was no census at that time, the little data that we have suggest that such groups comprised a large section of the village population, had the least resources and were constrained by their position in the caste hierarchy, much like the Dalits of modern India. Such distinctions had begun penetrating into other

Fig. 8.2
An early nineteenth-century painting depicting a village in the Punjab

⊃ Describe what women and men are shown doing in the illustration as well as the architecture of the village.

communities too. In Muslim communities menials like the halalkhoran (scavengers) were housed outside the boundaries of the village; similarly the mallahzadas (literally, sons of boatmen) in Bihar were comparable to slaves.

There was a direct correlation between caste, poverty and social status at the lower strata of society. Such correlations were not so marked at intermediate levels. In a manual from seventeenth-century Marwar, Rajputs are mentioned as peasants, sharing the same space with Jats, who were accorded a lower status in the caste hierarchy. The Gauravas, who cultivated land around Vrindavan (Uttar Pradesh), sought Rajput status in the seventeenth century. Castes such as the Ahirs, Gujars and Malis rose in the hierarchy because of the profitability of cattle rearing and horticulture. In the eastern regions, intermediate pastoral and fishing castes like the Sadgops and Kaivartas acquired the status of peasants.

2.2 Panchayats and headmen

The village panchayat was an assembly of elders, usually important people of the village with hereditary rights over their property. In mixed-caste villages, the panchayat was usually a heterogeneous body. An oligarchy, the panchayat represented various castes and communities in the village, though the village menial-cum-agricultural worker was unlikely to be represented there. The decisions made by these panchayats were binding on the members.

The panchayat was headed by a headman known as muqaddam or mandal. Some sources suggest that the headman was chosen through the consensus of the village elders, and that this choice had to be ratified by the zamindar. Headmen held office as long as they enjoyed the confidence of the village elders, failing which they could be dismissed by them. The chief function of the headman was to supervise the preparation of village accounts, assisted by the accountant or patwari of the panchayat.

The panchayat derived its funds from contributions made by individuals to a common financial pool. These funds were used for defraying the costs of entertaining revenue officials who visited the village from time to time. Expenses for community welfare activities such as tiding over

Corrupt mandals

The mandals often misused their positions. They were primarily accused of defrauding village accounts in connivance with the patwari and for underassessing the revenue they owed from their own lands in order to pass the additional burden on to the smaller cultivators.

natural calamities like floods, were also met from these funds. Often these funds were also deployed in construction of a bund or digging a canal which peasants usually could not afford to do on their own.

One important function of the panchayat was to ensure that caste boundaries among the various communities inhabiting the village were upheld. In eastern India all marriages were held in the presence of the mandal. In other words one of the duties of the village headman was to oversee the conduct of the members of the village community "chiefly to prevent any offence against their caste".

Panchayats also had the authority to levy fines and inflict more serious forms of punishment like expulsion from the community. The latter was a drastic step and was in most cases meted out for a limited period. It meant that a person forced to leave the village became an outcaste and lost his right to practise his profession. Such a measure was intended as a deterrent to violation of caste norms.

In addition to the village panchayat each caste or jati in the village had its own jati panchayat. These panchayats wielded considerable power in rural society. In Rajasthan jati panchayats arbitrated civil disputes between members of different castes. They mediated in contested claims on land, decided whether marriages were performed according to the norms laid down by a particular caste group, determined who had ritual precedence in village functions, and so on. In most cases, except in matters of criminal justice, the state respected the decisions of jati panchayats.

Archival records from western India – notably Rajasthan and Maharashtra – contain petitions presented to the panchayat complaining about unfortunate taxation or the demand for unpaid labour (begar) imposed by the "superior" castes or officials of the state. These petitions were usually made by villagers from the lowest rungs of rural society. Often petitions were made collectively as

Fig. 8.4

➲ Describe the activities that are shown in the illustration.

well, by a caste group or a community protesting against what they considered were morally illegitimate demands on the part of elite groups. These included excessive tax demands which, especially in times of drought or other disasters, endangered the peasants' subsistence. In the eyes of the petitioners the right to the basic minimum for survival was sanctioned by custom. They regarded the village panchayat as the court of appeal that would ensure that the state carried out its moral obligations and guaranteed justice.

The decision of the panchayat in conflicts between "lower-caste" peasants and state officials or the local zamindar could vary from case to case. In cases of excessive revenue demands, the panchayat often suggested compromise. In cases where reconciliation failed, peasants took recourse to more drastic forms of resistance, such as deserting the village. The relatively easy availability of uncultivated land and the competition over labour resources made this an effective weapon in the hands of cultivators.

2.3 Village artisans

Another interesting aspect of the village was the elaborate relationship of exchange between different producers. Marathi documents and village surveys made in the early years of British rule have revealed the existence of substantial numbers of artisans, sometimes as high as 25 per cent of the total households in the villages.

At times, however, the distinction between artisans and peasants in village society was a fluid one, as many groups performed the tasks of both. Cultivators and their families would also participate in craft production – such as dyeing, textile printing, baking and firing of pottery, making and repairing

agricultural implements. Phases in the agricultural calendar when there was a relative lull in activity, as between sowing and weeding or between weeding and harvesting, were a time when cultivators could engage in artisanal production.

Village artisans – potters, blacksmiths, carpenters, barbers, even goldsmiths – provided specialised services in return for which they were compensated by villagers by a variety of means. The most common way of doing so was by giving them a share of the harvest, or an allotment of land, perhaps cultivable wastes, which was likely to be decided by the panchayat. In Maharashtra such lands became the artisans' *miras* or *watan* – their hereditary holding.

Another variant of this was a system where artisans and individual peasant households entered into a mutually negotiated system of remuneration, most of the time goods for services. For example, eighteenth-century records tell us of zamindars in Bengal who remunerated blacksmiths, carpenters, even goldsmiths for their work by paying them "a small daily allowance and diet money". This later came to be described as the *jajmani* system, though the term was not in vogue in the sixteenth and seventeenth centuries. Such evidence is interesting because it indicates the intricate ways in which exchange networks operated at the micro-level of the village. Cash remuneration was not entirely unknown either.

2.4 A "little republic"?

How does one understand the significance of the village community? Some British officials in the nineteenth century saw the village as a "little republic" made up of fraternal partners sharing resources and labour in a collective. However, this was not a sign of rural egalitarianism. There was individual ownership of assets and deep inequities based on caste and gender distinctions. A group of powerful individuals decided the affairs of the village, exploited the weaker sections and had the authority to dispense justice.

More importantly, a cash nexus had already developed through trade between villages and towns. In the Mughal heartland too, revenue was assessed and collected in cash. Artisans producing for the export market (for example, weavers) received their

Money in the village

The seventeenth-century French traveller Jean-Baptiste Tavernier found it remarkable that in "India a village must be very small indeed if it has not a money-changer called a Shroff. (They) act as bankers to make remittances of money (and who) enhance the rupee as they please for paise and the paise for these (cowrie) shells".

Fig. 8.6

advances or wages in cash, as did producers of commercial products like cotton, silk or indigo.

☐ Discuss...

In what ways do you think the panchayats described in this section were similar to or different from present-day gram panchayats?

3. WOMEN IN AGRARIAN SOCIETY

As you may have observed in many different societies, the production process often involves men and women performing certain specified roles. In the contexts that we are exploring, women and men had to work shoulder to shoulder in the fields. Men tilled and ploughed, while women sowed, weeded, threshed and winnowed the harvest. With the growth of nucleated villages and expansion in individuated peasant farming, which characterised medieval Indian agriculture, the basis of production was the labour and resources of the entire household. Naturally, a gendered segregation between the home (for women) and the world (for men) was not possible in this context. Nonetheless biases related to women's biological functions did continue. Menstruating women, for instance, were not allowed to touch the plough or the potter's wheel in western India, or enter the groves where betel-leaves (paan) were grown in Bengal.

Artisanal tasks such as spinning yarn, sifting and kneading clay for pottery, and embroidery were among the many aspects of production dependent on female labour. The more commercialised the product, the greater the demand on women's labour to produce it. In fact, peasant and artisan women worked not only in the fields, but even went to the houses of their employers or to the markets if necessary.

Women were considered an important resource in agrarian society also because they were child bearers in a society dependent on labour. At the same time, high mortality rates among women – owing to malnutrition, frequent pregnancies, death during childbirth – often meant a shortage of wives. This led to the emergence of social customs in peasant and artisan communities that were distinct from

those prevalent among elite groups. Marriages in many rural communities required the payment of bride-price rather than dowry to the bride's family. Remarriage was considered legitimate both among divorced and widowed women.

The importance attached to women as a reproductive force also meant that the fear of losing control over them was great. According to established social norms, the household was headed by a male. Thus women were kept under strict control by the male members of the family and the community. They could inflict draconian punishments if they suspected infidelity on the part of women.

Documents from Western India - Rajasthan, Gujarat and Maharashtra - record petitions sent by women to the village panchayat, seeking redress and justice. Wives protested against the infidelity of their husbands or the neglect of the wife and children by the male head of the household, the grihasti. While male infidelity was not always punished, the state and "superior" caste groups did intervene when it came to ensuring that the family was adequately provided for. In most cases when women petitioned to the panchayat, their names were excluded from the record: the petitioner was referred to as the mother, sister or wife of the male head of the household.

Amongst the landed gentry, women had the right to inherit property. Instances from the Punjab show that women, including widows, actively participated in the rural land market as sellers of property inherited by them. Hindu and Muslim women inherited zamindaris which they were free to sell or mortgage. Women zamindars were known in eighteenth-century Bengal. In fact, one of the biggest and most famous of the eighteenth-century zamindaris, that of Rajshahi, had a woman at the helm.

Are there any differences in the access men and women have to agricultural land in your study?

4. FORESTS AND TRIBES

4.1 Beyond settled villages

There was more to rural India than sedentary agriculture. Apart from the intensively cultivated provinces in northern and north-western India, huge swathes of forests – dense forest (jangal) or scrubland (kharbandi) – existed all over eastern India, central India, northern India including the Terai on the Indo-Nepal border, Jharkhand, and in peninsular India down the Western Ghats and the Deccan plateau. Though it is nearly impossible to set an all-India average of the forest cover for this period, informed conjectures based on contemporary sources suggest an average of 40 per cent.

Forest dwellers were termed jangli in contemporary texts. Being jangli, however, did not mean an absence of "civilisation", as popular usage of the term today seems to connote. Rather, the term described those whose livelihood came from the gathering of forest produce, hunting and shifting agriculture. These activities were largely season specific. Among the Bhils, for example, spring was reserved for collecting forest produce, summer for fishing, the monsoon months for cultivation, and autumn and winter for hunting. Such a sequence presumed and perpetuated mobility, which was a distinctive feature of tribes inhabiting these forests.

For the state, the forest was a subversive place – a place of refuge (mawas) for troublemakers. Once again, we turn to Babur who says that jungles provided a good defence "behind which the people of the pargana become stubbornly rebellious and pay no taxes".

4.2 Inroads into forests

External forces entered the forest in different ways. For instance, the state required elephants for the army. So the peshkash levied from forest people often included a supply of elephants.

In the Mughal political ideology, the hunt symbolised the overwhelming concern of the state to ensure justice to all its subjects, rich and poor. Regular hunting expeditions, so court historians tell us, enabled the emperor to travel across the extensive territories of his empire and personally attend to the grievances of its inhabitants. The hunt was a subject frequently painted by court artists. The painter resorted to the device of inserting a small scene somewhere in the picture that functioned as a symbol of a harmonious reign.

The jama was an administrative estimation of a Mughal province.

Peshkash was a form of tribute collected by the Mughal state.

Source 3

Clearance of forests for agricultural settlements

This is an excerpt from a sixteenth-century Bengali poem, Chandimangala, composed by Mukundaram Chakrabarti. The hero of the poem, Kalaketu, set up a kingdom by clearing forests:

Hearing the news, outsiders came from various lands
Kalaketu then bought and distributed among them
Heavy knives, axes, battle-axes and pikes
From the north came the Dom (people)
One hundred of them advanced

They were struck with wonder on seeing Kalaketu
Who distributed betel-nut to each of them
From the south came the harvesters
Five hundred of them under one organiser
From the west came Gefar Khan
Together with many, many thousand men
Sulasuli bows in their hands

They changed the names of their pir and paighambar
(Prophet)
Having cleared the forest
They established markets
Hundreds and hundreds of foreigners
Ate and entered the forest
Hearing the sound of the axe
Tigers became apprehensive and ran away, roaring.

What forms of information has the Source given the text writer? Compare its message with that of the miniature painting in Fig. 8.4. Who are the people identified as "foreigners" from the perspective of the forest dwellers?

Source 4

Trade between the hill tribes and the plains, c. 1595

This is how Abu'l Fazl describes the transactions between the hill tribes and the plains in the suba of Srinagar (part of present-day Uttar Pradesh):

From the northern mountains quantities of goods are carried on the backs of men, of stout ponies and of goats, such as gold, copper, lead, musk, tails of the kutas cow (the yak), honey, chuk (an acid composed of orange juice and lemon boiled together), pomegranate seed, ginger, long pepper, majit (a plant producing a red dye), root, borax, zedoary, a root resembling turmeric, wax, woollen stuffs, wooden ware, hawks, falcons, black falcons, merlins (a kind of bird), and other articles. In exchange they carry back white and coloured cloths, amber, salt, asafoetida, ornaments, glass and earthen ware.

◆ What are the modes of transport described in this passage? Why do you think they were used? Explain what each of the articles brought from the plains to the hills may have been used for.

Fig. 10.10
A peasant and a hunter listening to a sufi singer

The spread of commercial agriculture was an important external factor that impinged on the lives of those who lived in the forests. Forest products – like honey, beeswax and gum lac – were in great demand. Some, such as gum lac, became major items of overseas export from India in the seventeenth century. Elephants were also captured and sold. Trade involved an exchange of commodities through barter as well. Some tribes, like the Lohanis in the Punjab, were engaged in overland trade between India and Afghanistan, and in the town-country trade in the Punjab itself.

Social factors too wrought changes in the lives of forest dwellers. Like the "big men" of the village community, tribes also had their chieftains. Many tribal chiefs had become zamindars, some even became kings. For this they required to build up an army. They recruited people from their lineage groups or demanded that their fraternity provide military service. Tribes in the Sind region had armies comprising 6,000 cavalry and 7,000 infantry. In Assam, the Ahom kings had their paiks, people who were obliged to render military service in exchange for land. The capture of wild elephants was declared a royal monopoly by the Ahom kings.

Though the transition from a tribal to a monarchical system had started much earlier, the process seems to have become fully developed only by the sixteenth century. This can be seen from the *Ain*'s observations on the existence of tribal kingdoms in the north-east. War was a common occurrence. For instance, the Koch kings fought and subjugated a number of neighbouring tribes in a long sequence of wars through the sixteenth and seventeenth centuries.

New cultural influences also began to penetrate into forested zones. Some historians have indeed suggested that sufi saints (pirs) played a major role in the slow acceptance of Islam among agricultural communities emerging in newly colonised places (see also Chapter 8).

5. THE ZAMINDARS

Our story of agrarian relations in Mughal India will not be complete without referring to a class of people in the countryside that lived off agriculture but did not participate directly in the processes of agricultural production. These were the zamindars who were landed proprietors who also enjoyed certain social and economic privileges by virtue of their superior status in rural society. Caste was one factor that accounted for the elevated status of zamindars; another factor was that they performed certain services (khidmat) for the state.

The zamindars held extensive personal lands termed milkiyat, meaning property. Milkiyat lands were cultivated for the private use of zamindars, often with the help of hired or servile labour. The zamindars could sell, bequeath or mortgage these lands at will.

Zamindars also derived their power from the fact that they could often collect revenue on behalf of the state, a service for which they were compensated financially. Control over military resources was another source of power. Most zamindars had fortresses (qilachas) as well as an armed contingent comprising units of cavalry, artillery and infantry.

Thus if we visualise social relations in the Mughal countryside as a pyramid, zamindars clearly constituted its very narrow apex. Abu'l Fazl's account indicates that an "upper-caste", Brahmana-Rajput

combine had already established firm control over rural society. It also reflects a fairly large representation from the so-called intermediate castes, as we saw earlier, as well as a liberal sprinkling of Muslim zamindars.

Contemporary documents give an impression that conquest may have been the source of the might of some zamindars. The dispossession of weaker people by a powerful military chieftain was quite often a way of expanding a zamindari. It is, however, unlikely that the state would have allowed such a show of aggression by a zamindar unless he had been confirmed by an imperial order (sanad).

More important were the slow processes of zamindari consolidation, which are also documented in sources. These involved colonisation of new lands, by transfer of rights, by order of the state and by purchase. These were the processes which perhaps permitted people belonging to the relatively "lower" castes to enter the rank of zamindars as zamindaris were bought and sold quite briskly in this period.

A combination of factors also allowed the consolidation of clan- or lineage-based zamindars. For example, the Rajputs and Jats adopted these strategies to consolidate their control over vast swathes of territory in northern India. Likewise, peasant-pastoralists like the Sadgops carved out powerful zamindaris in areas of central and south-western Bengal.

Zamindars spearheaded the colonisation of agricultural land, and helped in settling cultivators by providing them with the means of cultivation, including cash loans. The buying and selling of zamindaris accelerated the process of monetisation in the countryside. In addition, zamindars sold the produce from their milkiyat lands. There is evidence to show that zamindars often established markets (haats) to which peasants also came to sell their produce.

Although there can be little doubt that zamindars were an exploitative class, their relationship with the peasantry had an element of reciprocity, paternalism and patronage. Two aspects reinforce this view. First, the bhakti saints, who eloquently condemned caste-based and other forms of oppression (see also Chapter 5), did not portray the zamindars (or, interestingly, the moneylenders) as exploiters or oppressors of the peasantry. Usually it was the

A parallel army!

According to the Ain, the combined military strength of the zamindars in Mughal India was 384,558 cavalry, 4,277,057 infantry, 1,863 elephants, 4,260 cannons and 4,500 boats.

revenue official of the state who was the object of their ire. Several in a large number of agrarian uprisings which erupted in north India in the seventeenth century, zamindars often enacted the support of the peasantry in their struggle against the state.

6. LAND REVENUE SYSTEM

Revenue from the land was the economic mainstay of the Mughal Empire. It was therefore vital for the state to create an administrative apparatus to ensure control over agricultural production, and to fix and collect revenue from across the length and breadth of the rapidly expanding empire. This apparatus included the office (daftar) of the diwan who was responsible for supervising the fiscal system of the empire. Thus revenue officials and record keepers penetrated the agricultural domain and became a decisive agent in shaping agrarian relations.

The Mughal state tried to first acquire specific information about the extent of the agricultural lands in the empire and what these lands produced before fixing the burden of taxes on people. The land revenue arrangements consisted of two stages – first, assessment and then actual collection. The jama was the amount assessed, as opposed to hasil, the amount collected. In his list of duties of the amil-guzar or revenue collector, Akbar decreed that while he should strive to make cultivators pay in cash, the option of payment in kind was also to be kept open. While fixing revenue, the attempt of the state was to maximise its claims. The scope of actually realising these claims was, however, sometimes thwarted by local conditions.

Both cultivated and cultivable lands were measured in each province. The Ain compiled the aggregates of such lands during Akbar's rule. Efforts to measure lands continued under subsequent emperors. For instance, in 1665, Aurangzeb expressly instructed his revenue officials to prepare annual records of the number of cultivators in each village (Source 7). Yet not all areas were measured successfully. As we have seen, forests covered huge areas of the subcontinent and thus remained unmeasured.

Source 3

Classification of lands under Akbar

The following is a listing of areas of classification emerged from the Ain:

The Emperor Akbar in his profound sagacity classified the lands and fixed a different revenue to be paid by each. *Polaj* is land which is annually cultivated for each crop in succession and is never allowed to lie fallow. *Parauti* is land left out of cultivation for a time that it may recover its strength. *Chachar* is land that has lain fallow for three or four years. *Banjar* is land uncultivated for five years and more. Of the first two kinds of land, there are three classes, good, middling and bad. They add together the produce of each sort, and the third of this represents the medium produce, one-third part of which is exacted as the Royal dues.

❖ What principles did the Mughal state follow while classifying lands in its territories? How was revenue assessed?

Map 1
The expansion of the Mughal Empire

❖ What impact do you think the expansion of the empire would have had on land revenue collection?

The mansabdari system

The Mughal administrative system had at its apex a military-cum-bureaucratic apparatus (mansabdari) which was responsible for looking after the civil and military affairs of the state. Some mansabdars were paid in cash (naqdi), while the majority of them were paid through assignments of revenue (jagir) in different regions of the empire. They were transferred periodically. See also Chapter 9.
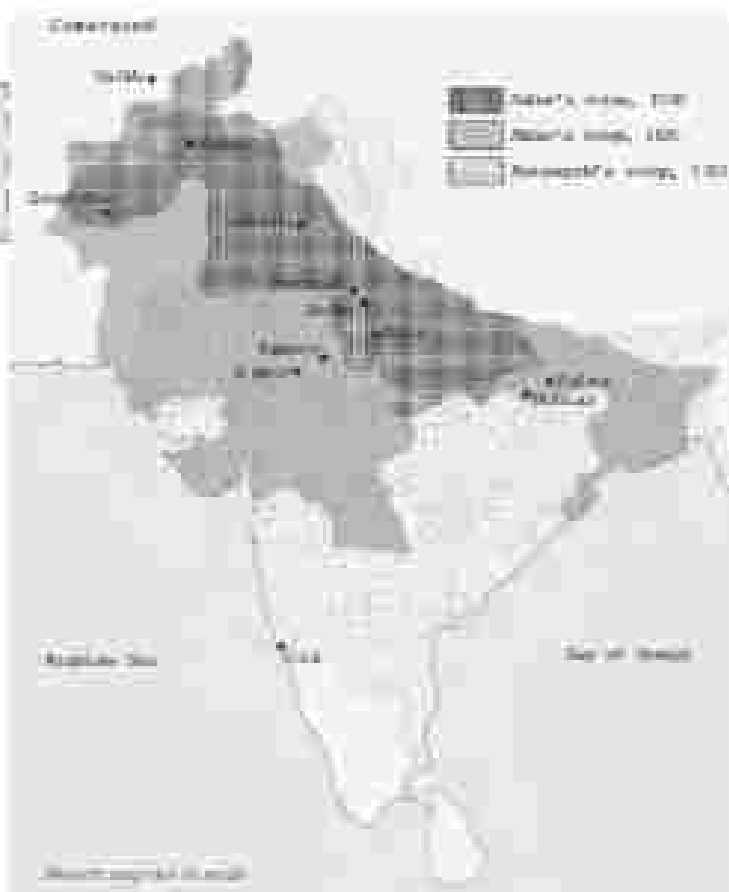

Source 6

Cash or kind?

The rules on land revenue collection:

Let him [the cultivator] not make it a practice of taking only in cash but also in kind. The latter is effected in several ways. First, *kankut*: in the Hindi language *kan* signifies grain, and *kut* estimates. If any doubt arise, the crops should be cut and estimated in three lots, the good, the middling and the inferior, and the hesitation removed. Often too the land taken by appraisement gives a sufficiently accurate return. Secondly, *batai*, also called *bhaoli*, the crops are reaped and stacked and divided by agreement in the presence of the parties. But in this case several intelligent inspectors are required; otherwise, the evil-minded and false are given to deception. Thirdly, *khet-batai*, when they divide the fields after they are sown. Fourthly, *lang batai*, after cutting the grain, they form it in heaps and divide it among themselves, and each takes his share home and turns it to profit.

> ➤ What difference would each of the systems of assessment and collection of revenue have made to the cultivator?

Source 7

The jama

This is an excerpt from Aurangzeb's order to his revenue official, 1665:

He should direct the amins of the *parganas* that they should discover the actual condition of cultivation (*mazru'at*) (legally village possessions *jumlagi mauza'*), and after careful scrutiny assess the jama, keeping in view the financial interests (*hifz-ul-mal*) of the government and the welfare of the peasantry.

> ➤ Why do you think the emperor insisted on a detailed survey?

➤ **Discuss…**
Would you consider the land revenue system of the Mughals as a flexible one?

7. THE FLOW OF SILVER

The Mughal Empire was among the large territorial empires in Asia that had managed to consolidate power and resources during the sixteenth and seventeenth centuries. These empires were the Ming (China), Safavid (Iran) and Ottoman (Turkey). The political stability achieved by all these empires helped create vibrant networks of overland trade from China to the Mediterranean Sea. Voyages of discovery and the opening up of the New World resulted in a massive expansion of Asia's (particularly India's) trade with Europe. This resulted in a greater geographical diversity of India's overseas trade as well as an

Fig. 8.11

Fig. A.12
A silver rupee issued by Aurangzeb

Fig. A.13
An example of textiles produced in the subcontinent to meet the demands of European markets

expansion in the commodity composition of this trade. An expanding trade brought in large amounts of silver bullion into Asia to pay for goods procured from India, and a large part of that bullion gravitated towards India. This was good for India as it did not have natural resources of silver. As a result, the period between the sixteenth and eighteenth centuries was also marked by a remarkable stability in the availability of metal currency, particularly the silver rupee in India. This facilitated an unprecedented expansion of minting of coins and the circulation of money in the economy as well as the ability of the Mughal state to extract taxes and revenue in cash.

The testimony of an Italian traveller, Giovanni Careri, who passed through India c. 1690, provides a graphic account about the way silver travelled across the globe to reach India. It also gives us an idea of the phenomenal amounts of cash and commodity transactions in seventeenth-century India.

Source 4

How silver came to India

This excerpt from Giovanni Careri's account (based on Bernier's account) gives an idea of the enormous amount of wealth that found its way into the Mughal Empire:

That the Reader may form some idea of the Wealth of this (Mughal) Empire, he will observe that all the Gold and Silver, which circulates throughout the World at last centres here. It is well known that as much of it comes out of America, after running through several Kingdoms of Europe, goes partly into Turky (Turkey), for several sorts of Commodities, and part into Persia, by the way of Smirna for Silk. Now the Turks not being able to abstain from Coffee, which comes from Yeman (Oman) and Arabia ... nor Persia, Arabia, and the Turks themselves to go without the commodities of India, send vast quantities of Mony (money) to Moka (Mocha) on the Red Sea, near Babel Mandel, to Bassora (Basra), at the bottom of the Persian Gulph (Gulf) ... which is afterwards sent over in Ships to Indostan (Hindustan). Besides the Indian, Dutch, English, and Portuguese Ships, that every Year carry the Commodities of Indostan to Pegu, Tanassery (parts of Myanmar), Siam (Thailand), Ceylon (Sri Lanka) ... the Maldive Islands, Mozambique and other Places, must of necessity bring much Gold and Silver thither from those Countries. All that the Dutch fetch from the Mines in Japan, sooner or later, goes to Indostan; and the gold carry'd hence into Europe, whether to France, England, or Portugal, are all purchas'd for ready Mony, which remains there.

8. THE *AIN-I AKBARI* OF ABU'L FAZL ALLAMI

The *Ain-i Akbari* was the culmination of a large historical, administrative project of classification undertaken by Abu'l Fazl at the order of Emperor Akbar. It was completed in 1598, the forty-second regnal year of the emperor, after having gone through five revisions. The *Ain* was part of a larger project of history writing commissioned by Akbar. This history, known as the *Akbar Nama*, comprised three books. The first two provided a historical narrative. We will look at these parts more closely in Chapter 9. The *Ain-i Akbari*, the third book, was organised as a compendium of imperial regulations and a gazetteer of the empire.

The *Ain* gives detailed accounts of the organisation of the court, administration and army, the sources of revenue and the physical layout of the provinces of Akbar's empire and the literary, cultural and religious traditions of the people. Along with a description of the various departments of Akbar's government and elaborate descriptions of the

Fig. 9.14
Abu'l Fazl presenting the
manuscript of the completed
Akbar Nama to his patron

various provinces (subas) of the empire, the Ain
gives us intricate quantitative information of
those provinces.

Collecting and compiling this information
systematically was an important imperial exercise.
It informed the emperor about the varied and diverse
customs and practices prevailing across his
extensive territories. The Ain is therefore a mine of
information for us about the Mughal Empire during
Akbar's reign. It is important, however, to keep in
mind that this is a view of the regions from the
centre, a view of society from its apex.

The Ain is made up of five books (daftars), of which
the first three books describe the administration.
The first book, called manzil-abadi, concerns the
imperial household and its maintenance. The second
book, sipah-abadi, covers the military and civil
administration and the establishment of servants.
This book includes notices and short biographical
sketches of imperial officials (mansabdars), learned
men, poets and artists.

The third book, mulk-abadi, is the one which deals
with the fiscal side of the empire and provides rich
quantitative information on revenue rates, followed
by the "Account of the Twelve Provinces". This section
has detailed statistical information, which includes
the geographic, topographic and economic profile of
all subas and their administrative and fiscal
divisions (sarkars, parganas and mahals), total
measured area, and assessed revenue (jama).

After setting out details at the suba level, the Ain
goes on to give a detailed picture of the sarkars below
the suba. This it does in the form of tables, which
have eight columns giving the following information:
(1) parganat/mahal; (2) qila (forts); (3) arazi and
zamin-i paimaish (measured area); (4) naqdi, revenue
assessed in cash; (5) suyurghal, grants of revenue in
charity; (6) zamindars; columns 7 and 8 contain
details of the castes of these zamindars, and their
troops including their horsemen (sawar), foot-soldiers
(piyada) and elephants (fil). The mulk-abadi gives a
fascinating, detailed and highly complex view of
agrarian society in northern India. The fourth and
fifth books (daftars) deal with the religious, literary
and cultural traditions of the people of India and also
contain a collection of Akbar's "auspicious sayings".

Source 6

"Moistening the rose garden of fortune"

In this extract Abu'l Fazl gives a vivid account of how and from whom he collected his information:

To Abu'l Fazl, son of Mubarak … this sublime mandate was given: "Write with the pen of sincerity the account of the glorious events and of our dominion-conquering victories … Assuredly, I spent much labour and research in collecting the records and narratives of His Majesty's actions and I was a long time interrogating the servants of the State and the old members of the illustrious family. I examined both prudent, truth-speaking old men and active-minded, right-actioned young ones and reduced their statements to writing. The Royal commands were issued to the provinces, that those who from old service remembered, with certainty or with something of doubt, the events of the past, should copy out the notes and memoranda and transmit them to the court. Their a second command shone forth from the holy Presence-chamber, to wit – that the materials which had been collected should be … recited in the royal hearing, and whatever might have to be written down afterwards, should be introduced into the noble volume as a supplement, and that such details as on an account of the minuteness of the inquiries and the number of affairs, (which) could not then be brought to an end, should be inserted afterwards at my leisure.

Being relieved by the royal order – the interpreter of the Divine ordinance – from the secret anxiety of my heart, I proceeded to reduce into writing the rough draughts (drafts) which were void of the grace of arrangement and style. I obtained the chronicle of events beginning at the Nineteenth Year of the Divine Era, when the Record Office was established by the enlightened intellect of His Majesty, and from its rich pages I gathered the accounts of many events. Great pains too, were taken to procure the originals or copies of most of the orders which had been issued to the provinces from the Accession up to the present day. I also took much trouble to incorporate many of the reports which ministers and high officials had submitted, about the affairs of the empire and the events of foreign countries. And my labour-loving soul was sustained by the sublimity of labour and research. I also exerted myself energetically to collect the rough notes and memoranda of sagacious and well-informed men. By these means, I constructed a reservoir for the irrigating and moistening the rose garden of fortune.

(the Akbar Nama)

➲ List all the sources that Abu'l Fazl used to compile his work. Which of these sources would have been most useful for arriving at an understanding of agrarian relations? To what extent do you think his work would have been influenced by his relationship with Akbar?

Translating the Ain

Given the importance of the *Ain*, it has been translated for use by a number of scholars. Henry Blochmann edited it and the Asiatic Society of Bengal, Calcutta (present-day Kolkata), published it in its *Bibliotheca Indica* series. The book has also been translated into English in three volumes. The standard translation of Volume 1 is that of Henry Blochmann (Calcutta 1873). The other two volumes were translated by H.S. Jarrett (Calcutta 1891 and 1894).

Although the *Ain* was officially sponsored to record detailed information to facilitate Emperor Akbar govern his empire, it was much more than a reproduction of official papers. That the manuscript was revised five times by the author would suggest a high degree of caution on the part of Abu'l Fazl and a search for authenticity. For instance, oral testimonies were cross-checked and verified before being incorporated as 'facts' in the chronicle. In the quantitative sections, all numeric data were reproduced in words so as to minimise the chances of subsequent transcriptional errors.

Historians who have carefully studied the *Ain* point out that it is not without its problems. Numerous errors in totalling have been detected. These are ascribed to simple slips of arithmetic or of transcription by Abu'l Fazl's assistants. These are generally minor and do not detract from the overall quantitative veracity of the manuals.

Another limitation of the *Ain* is the somewhat skewed nature of the quantitative data. Data were not collected uniformly from all provinces. For instance, while for many subas detailed information was compiled about the caste composition of the zamindars, such information is not available for Bengal and Orissa. Further, while the fiscal data from the subas is remarkable for its richness, some equally vital parameters such as prices and wages from these same areas are not as well documented. The detailed list of prices and wages that the *Ain* does provide is mainly derived from data pertaining to areas in or around the imperial capital of Agra, and is therefore of limited relevance for the rest of the country.

These limitations notwithstanding, the *Ain* remains an extraordinary document of its times. By providing fascinating glimpses into the structure and organisation of the Mughal Empire and by giving us quantitative information about its products and people, Abu'l Fazl achieved a major breakthrough in the tradition of medieval chroniclers who wrote mostly about remarkable political events – wars, conquests, political machinations, and dynastic turmoil. Information about the country, its people

and its products has mentioned only incidentally and as embellishments to the essentially political thrust of the narrative.

The *Ain* completely departed from this tradition as it recorded information about the empire and the people of India, and thus constitutes a benchmark for studying India at the turn of the seventeenth century. The value of the *Ain's* quantitative evidence is uncontested where the study of agrarian relations is concerned. But it is the information it contains on people, their professions and trades and on the imperial establishment and the grandees of the empire which enables historians to reconstruct the social fabric of India at that time.

TIMELINE
LANDMARKS IN THE HISTORY OF THE MUGHAL EMPIRE

1526	Babur defeats Ibrahim Lodi, the Delhi Sultan, at Panipat, becomes the first Mughal emperor
1530-40	First phase of Humayun's reign
1540-55	Humayun defeated by Sher Shah, in exile at the Safavid court
1555-56	Humayun regains lost territories
1556-1605	Reign of Akbar
1605-27	Reign of Jahangir
1628-58	Reign of Shah Jahan
1658-1707	Reign of Aurangzeb
1739	Nadir Shah invades India and sacks Delhi
1761	Ahmad Shah Abdali defeats the Marathas in the third battle of Panipat

1857	Last Mughal ruler, Bahadur Shah II, deposed by the British and exiled to Rangoon (present-day Yangon, Myanmar)

ANSWER IN 100-150 WORDS

1. What are the problems in using the Ain as a source for reconstructing agrarian history? How do historians deal with this situation?

2. To what extent is it possible to characterise agricultural production in the sixteenth-seventeenth centuries as subsistence agriculture? Give reasons for your answer.

3. Describe the role played by women in agricultural production.

4. Discuss, with examples, the significance of monetary transactions during the period under consideration.

5. Examine the evidence that suggests that land revenue was important for the Mughal fiscal system.

WRITE A SHORT ESSAY (ABOUT 250-300 WORDS) ON THE FOLLOWING:

6. To what extent do you think caste was a factor in influencing social and economic relations in agrarian society?

7. How were the lives of forest dwellers transformed in the sixteenth and seventeenth centuries?

8. Examine the role played by zamindars in Mughal India.

9. Discuss the ways in which panchayats and village headmen regulated rural society.

Fig. 8.15
A seventeenth-century painting depicting jewellers

MAP WORK

10. On an outline map of the world, mark the areas which had economic links with the Mughal Empire, and trace out possible routes of communication.

PROJECT (CHOOSE ONE)

11. Visit a neighbouring village. Find out how many people live there, which crops are grown, which animals are raised, which artisanal groups reside there, whether women own land, how the local panchayat functions. Compare this information with what you have learnt about the sixteenth-seventeenth centuries, noting similarities and differences. Explain both the changes and the continuities that you find.

12. Select a small section of the Ain (10-12 pages, available online at the website indicated below). Read it carefully and prepare a report on how it can be used by a historian.

Fig. 8.16
A painting depicting a weaver selling sweets

The rulers of the Mughal Empire saw themselves as appointed by Divine Will to rule over a large and heterogeneous populace. Although this grand vision was often circumscribed by actual political circumstances, it remained important. One way of transmitting this vision was through the writing of dynastic histories. The Mughal kings commissioned court historians to write accounts. These accounts recorded the events of the emperor's time. In addition, their writers collected vast amounts of information from the regions of the subcontinent to help the rulers govern their domain.

Modern historians writing in English have termed this genre of texts chronicles, as they present a continuous chronological record of events. Chronicles are an indispensable source for any scholar wishing to write a history of the Mughals. At one level they were a repository of factual information about the institutions of the Mughal state, painstakingly collected and classified by individuals closely connected with the court. At the same time these texts were intended as conveyors of meanings that the Mughal rulers sought to impose on their domain. They therefore give us a glimpse into how imperial ideologies were created and disseminated. This chapter will look at the workings of this rich and fascinating literature of the Mughal Empire.

1. THE MUGHALS AND THEIR EMPIRE

The name Mughal derives from Mongol. Though today the term evokes the grandeur of an empire, it was not the name the rulers of the dynasty chose for themselves. They referred to themselves as Timurids, as descendants of the Turkish ruler Timur on the paternal side. Babur, the first Mughal ruler, was related to Ghenghiz Khan from his mother's side. He spoke Turkish and referred derisively to the Mongols as barbaric hordes.

During the sixteenth century, Europeans used the term Mughal to describe the Indian rulers of this branch of the family. Over the past centuries the word has been frequently used – even the name Mowgli, the young hero of Rudyard Kipling's Jungle Book, is derived from it.

The empire was carved out of a number of regional states of India through conquests and political alliances between the Mughals and local chieftains. The founder of the empire, Zahiruddin Babur, was driven from his Central Asian homeland, Farghana, by the warring Uzbeks. He first established himself at Kabul and then in 1526 pushed further into the Indian subcontinent in search of territories and resources to satisfy the needs of the members of his clan.

His successor, Nasiruddin Humayun (1530-40, 1555-56) expanded the frontiers of the empire, but lost it to the Afghan leader Sher Shah Sur, who drove him into exile. Humayun took refuge in the court of the Safavid ruler of Iran. In 1555 Humayun defeated the Surs, but died a year later.

Many consider Jalaluddin Akbar (1556-1605) the greatest of all the Mughal emperors, for he not only expanded but also consolidated his empire, making it the largest, strongest and richest kingdom of his time. Akbar succeeded in extending the frontiers of the empire to the Hindukush mountains, and checked the expansionist designs of the Uzbeks of Turan (Central Asia) and the Safavids of Iran. Akbar had three fairly able successors in Jahangir (1605-27), Shah Jahan (1628-58) and Aurangzeb (1658-1707), much as their characters varied. Under them the territorial expansion continued, though at a much reduced pace. The three rulers maintained and consolidated the various instruments of governance.

Fig. 9.2
An eighteenth-century depiction of Humayun's wife Hamida crossing the deserts of Rajasthan

During the sixteenth and seventeenth centuries the institutions of an imperial structure were created. These included effective methods of administration and taxation. The visible centre of Mughal power was the court. Here political alliances and relationships were forged, status and hierarchies defined. The political system devised by the Mughals was based on a combination of military power and conscious policy to accommodate the different traditions they encountered in the subcontinent.

After 1707, following the death of Aurangzeb, the power of the dynasty diminished. In place of the vast apparatus of empire controlled from Delhi, Agra or Lahore – the different capital cities – regional powers acquired greater autonomy. Yet symbolically the prestige of the Mughal ruler did not lose its aura. In 1857 the last scion of this dynasty, Bahadur Shah Zafar II, was overthrown by the British.

2. THE PRODUCTION OF CHRONICLES

Chronicles commissioned by the Mughal emperors are an important source for studying the empire and its court. They were written in order to project a vision of an enlightened kingdom to all those who came under its umbrella. At the same time they were meant to convey to those who resisted the rule of the Mughals that all resistance was destined to fail. Also, the rulers wanted to ensure that there was an account of their rule for posterity.

The authors of Mughal chronicles were invariably courtiers. The histories they wrote focused on events centred on the ruler, his family, the court and nobles, wars and administrative arrangements. Their titles, such as the Akbar Nama, Shahjahan Nama, Alamgir Nama, that is, the story of Akbar, Shah Jahan and Alamgir (a title of the Mughal ruler Aurangzeb), suggest that in the eyes of their authors the history of the empire and the court was synonymous with that of the emperor.

2.1 From Turkish to Persian

Mughal court chronicles were written in Persian. Under the Sultans of Delhi it flourished as a language of the court and of literary writings, alongside north Indian languages, especially Hindavi and its regional variants. As the Mughals were Chaghtai Turks by origin, Turkish was their mother

tongue. Their first ruler Babur wrote poetry and his memoirs in this language.

It was Akbar who consciously set out to make Persian the leading language of the Mughal court. Cultural and intellectual contacts with Iran, as well as a regular stream of Iranian and Central Asian migrants seeking positions at the Mughal court, might have motivated the emperor to adopt the language. Persian was elevated to a language of empire, conferring power and prestige on those who had a command of it. It was spoken by the king, the royal household and the elite at court. Further, it became the language of administration at all levels so that accountants, clerks and other functionaries also learnt it.

Even when Persian was not directly used, its vocabulary and idioms heavily influenced the language of official records in Rajasthani and Marathi and even Tamil. Since the people using Persian in the sixteenth and seventeenth centuries came from many different regions of the subcontinent and spoke other Indian languages, Persian too became Indianised by absorbing local idioms. A new language, Urdu, sprang from the interaction of Persian with Hindavi.

Mughal chronicles such as the *Akbar Nama* were written in Persian, others, like Babur's memoirs, were translated from the Turkish into the Persian *Babur Nama*. Translations of Sanskrit texts such as the *Mahabharata* and the *Ramayana* into Persian were commissioned by the Mughal emperors. The *Mahabharata* was translated as the *Razmnama* (Book of Wars).

2.2 The making of manuscripts

All books in Mughal India were manuscripts, that is, they were handwritten. The centre of manuscript production was the imperial *kitabkhana*. Although *kitabkhana* can be translated as library, it was a scriptorium, that is, a place where the emperor's collection of manuscripts was kept and new manuscripts were produced.

The creation of a manuscript involved a number of people performing a variety of tasks. Paper makers were needed to prepare the folios of the manuscript, scribes or calligraphers to copy the text, gilders to illuminate the pages, painters to illustrate scenes

Fig. 9.3
A folio in nastaliq, the work of Muhammad Husayn al-Kashmir (c. 1575-1600), one of the finest calligraphers at Akbar's court, who was honoured with the title "zarrin qalam" (golden pen) in recognition of the perfectly proportioned curvature of his letters.

The calligrapher has signed his name on the lower margin of the page, taking up almost one-fourth of its space.

from the text, bookbinders to gather the individual folios and set them within ornamental covers. The finished manuscript was seen as a precious object, a work of intellectual wealth and beauty. It exemplified the power of its patron, the Mughal emperor, to bring such beauty into being.

At the same time some of the people involved in the actual production of the manuscript also got recognition in the form of titles and awards. Of these, calligraphers and painters held a high social standing while others, such as paper makers or bookbinders, have remained anonymous artisans.

Calligraphy, the art of handwriting, was considered a skill of great importance. It was practised using different styles. Akbar's favourite was the nastaliq, a fluid style with long horizontal strokes. It is written using a piece of trimmed reed with a tip of five to 10 mm called qalam, dipped in carbon ink (siyahi). The nib of the qalam is usually split in the middle to facilitate the absorption of ink.

3. THE PAINTED IMAGE

As we read in the previous section, painters too were involved in the production of Mughal manuscripts. Chronicles narrating the events of a Mughal emperor's reign contained, alongside the written text, images that described an event in visual form. When scenes or themes in a book were to be given visual expression, the scribe left blank spaces on nearby pages; paintings, executed separately by artists, were inserted to accompany what was described in words. These paintings were miniatures, and could therefore be passed around for viewing and mounting on the pages of manuscripts.

Paintings served not only to enhance the beauty of a book, but were believed to possess special powers of communicating ideas about the kingdom and the power of kings in ways that the written medium could not. The historian Abu'l Fazl described painting as a "magical art": in his view it had the power to make inanimate objects look as if they possessed life.

The production of paintings portraying the emperor, his court and the people who were part of it was a source of constant tension between rulers and representatives of the Muslim orthodoxy, the ulama. The latter did not fail to invoke the Islamic prohibition of the portrayal of human beings enshrined in the Qur'an as well as the *hadis*, which described an incident from the life of the Prophet Muhammad. Here the Prophet is cited as having forbidden the depiction of living beings in a naturalistic manner as it would suggest that the artist was seeking to appropriate the power of creation. This was a function that was believed to belong exclusively to God.

Fig. 9.4
A Mughal kitabkhana

Identify the different tasks involved in the production of a Mughal manuscript depicted in this miniature.

Yet interpretations of the *shari'a* changed with time. The body of Islamic tradition was interpreted in different ways by various social groups. Frequently each group put forward an understanding of tradition that would best suit their political needs. Muslim rulers in many Asian regions during centuries of empire building regularly commissioned artists to paint their portraits and scenes of life in their kingdoms. The Safavid kings of Iran, for example, patronised the finest artists, who were trained in workshops set up at court. The names of painters – such as that of Bihzad – contributed to spreading the cultural fame of the Safavid court far and wide.

Artists from Iran also made their way to Mughal India. Some were brought to the Mughal court, as in the case of Mir Sayyid Ali and Abdus Samad, who were made to accompany Emperor Humayun to Delhi. Others migrated in search of opportunities to win patronage and prestige. A conflict between the emperor and the spokesmen of orthodox Muslim opinion on the question of visual representations of living beings was a source of tension at the Mughal court. Akbar's court historian Abu'l Fazl cites the emperor as saying: "There are many that hate painting but such men I dislike. It appears to me that an artist has a unique way of recognising God when he must come to [feel] that he cannot bestow life on his work ..."

4. THE AKBAR NAMA AND THE BADSHAH NAMA

Among the important illustrated Mughal chronicles the *Akbar Nama* and *Badshah Nama* (The Chronicle of a King) are the most well known. Each manuscript contained an average of 150 full- or double-page paintings of battles, sieges, hunts, building construction, court scenes, etc.

The author of the *Akbar Nama* Abu'l Fazl grew up in the Mughal capital of Agra. He was widely read in Arabic, Persian, Greek philosophy and Sufism. Moreover, he was a forceful debater and independent thinker who consistently opposed the views of the conservative *ulama*. These qualities impressed Akbar, who found Abu'l Fazl ideally suited as an adviser and a spokesperson for his policies. One major

objective of the emperor was to free the state from the control of religious orthodoxy. In his role as court historian, Abu'l Fazl both shaped and articulated the ideas associated with the reign of Akbar.

Beginning in 1589, Abu'l Fazl worked on the *Akbar Nama* for thirteen years, repeatedly revising the draft. The chronicle is based on a range of sources, including actual records of events (*waqai*), official documents and oral testimonies of knowledgeable persons.

The *Akbar Nama* is divided into three books of which the first two are chronicles. The third book is the *Ain-i Akbari*. The first volume contains the history of mankind from Adam to one celestial cycle of Akbar's life (30 years). The second volume closes in the forty-sixth regnal year (1601) of Akbar. The very next year Abu'l Fazl fell victim to a conspiracy hatched by Prince Salim, and was murdered by his accomplice, Bir Singh Bundela.

The *Akbar Nama* was written to provide a detailed description of Akbar's reign in the traditional diachronic sense of recording politically significant events across time, as well as in the more novel sense of giving a synchronic picture of all aspects of Akbar's empire – geographic, social, administrative and cultural – without reference to chronology. In the *Ain-i Akbari* the Mughal Empire is presented as having a diverse population consisting of Hindus, Jainas, Buddhists and Muslims and a composite culture.

Abu'l Fazl wrote in a language that was ornate and which attached importance to diction and rhythm, as texts were often read aloud. This Indo-Persian style was patronised at court, and there were a large number of writers who wanted to write like Abu'l Fazl.

A pupil of Abu'l Fazl, Abdul Hamid Lahori is known as the author of the *Badshah Nama*. Emperor Shah Jahan, hearing of his talents, commissioned him to write a history of his reign modelled on the *Akbar Nama*. The *Badshah Nama* is thus official history in three volumes (*daftars*) of ten lunar years each. Lahori wrote the first and second daftars comprising the first two decades of the emperor's rule (1627-47); these volumes were later revised by Sadullah Khan. Shah Jahan's years' infirmities of old age prevented Lahori from proceeding with the third decade which was then chronicled by the historian Waris.

Travels of the Badshah Nama

Gifting of precious manuscripts was an established diplomatic custom under the Mughals. In emulation of this the Nawab of Awadh gifted the illustrated *Badshah Nama* to King George III in 1799. Since then it has been preserved in the English Royal Collections, now at Windsor Castle.

In 1994, conservation work required the bound manuscript to be taken apart. This made it possible to exhibit the paintings and in 1997 for the first time the *Badshah Nama* paintings were shown in exhibitions in New Delhi, London and Washington.

During the colonial period, British administrators began to study Indian history and to create an archive of knowledge about the subcontinent to help them better understand the people and the cultures of the empire they sought to rule. The Asiatic Society of Bengal, founded by Sir William Jones in 1784, undertook the editing, printing and translation of many Indian manuscripts.

Edited versions of the *Akbar Nama* and *Badshah Nama* were first published by the Asiatic Society in the nineteenth century. In the early twentieth century the *Akbar Nama* was translated into English by Henry Beveridge after years of hard labour. Only excerpts of the *Badshah Nama* have been translated into English to date; the text in its entirety still awaits translation.

5. THE IDEAL KINGDOM

5.1 A divine light

Court chronicles drew upon many sources to show that the power of the Mughal kings came directly from God. One of the legends they narrated was that of the Mongol queen Alanqua, who was impregnated by a ray of sunshine while resting in her tent. The offspring she bore carried this Divine Light and passed it on from generation to generation.

Abu'l Fazl placed Mughal kingship as the highest station in the hierarchy of objects receiving light emanating from God (*farr-i izadi*). Here he was inspired by a famous Iranian sufi, Shihabuddin Suhrawardi (d. 1191) who first developed this idea. According to this idea, there was a hierarchy in which the Divine Light was transmitted to the king who then became the source of spiritual guidance for his subjects.

Paintings that accompanied the narrative of the chronicles transmitted these ideas in a way that

---

The transmission of notions of luminosity

The origins of Suhrawardi's philosophy went back to Plato's *Republic*, where God is represented by the symbol of the sun. Suhrawardi's writings were universally read in the Islamic world. They were studied by Shaikh Mubarak, who transmitted their ideas to his sons, Faizi and Abu'l Fazl who were trained under him.

Fig. 8.5
This painting by Abu'l Hasan shows Jahangir dressed in resplendent clothes and jewels, holding up a portrait of his father Akbar.
Akbar is dressed in white, associated with sufi traditions, with the enlightened soul. He proffers a globe, symbolic of dynastic authority.
In the Mughal empire there was no law laying down which of the emperor's sons would succeed to the throne. This meant that every dynastic change was accomplished and decided by a fratricidal war. Towards the end of Akbar's reign, Prince Salim revolted against his father, seized power and assumed the title of Jahangir.

➡ How does this painting describe the relationship between father and son?
Why do you think Mughal artists frequently portrayed emperors against dark or dull backgrounds? What are the sources of light in this painting?

left a lasting impression on the minds of viewers. Mughal artists, from the seventeenth century onwards, began to portray emperors wearing the halo, which they saw on European paintings of Christ and the Virgin Mary to symbolise the light of God.

5.2 A unifying force

Mughal chronicles present the empire as comprising many different ethnic and religious communities – Hindus, Jainas, Zoroastrians and Muslims. As the source of all peace and stability the emperor stood above all religious and ethnic groups, mediated among them, and ensured that justice and peace prevailed. Abu'l Fazl describes the ideal of sulh-i kul (absolute peace) as the cornerstone of enlightened rule. In sulh-i kul all religions and schools of thought had freedom of expression but on condition that they did not undermine the authority of the state or fight among themselves.

The ideal of sulh-i kul was implemented through state policies – the nobility under the Mughals was a composite one comprising Iranis, Turanis, Afghans, Rajputs, Deccanis – all of whom were given positions and awards purely on the basis of their service and

loyalty to the king. Further, Akbar abolished the tax on pilgrimage in 1563 and jizya in 1564 as the two were based on religious discrimination. Instructions were sent to officers of the empire to follow the precept of sulh-i kul in administration.

All Mughal emperors gave grants to support the building and maintenance of places of worship. Even when temples were destroyed during war, grants were later issued for their repair – as we know from the reigns of Shah Jahan and Aurangzeb. However, during the reign of the latter, the jizya was re-imposed on non-Muslim subjects.

5.3 Just sovereignty as social contract

Abu'l Fazl defined sovereignty as a social contract: the emperor protects the four essences of his subjects, namely, life (jan), property (mal), honour (namus) and faith (din), and in return demands obedience and a share of resources. Only just sovereigns were thought to be able to honour the contract with power and Divine guidance.

Fig. 8.6
Jahangir presenting Prince Khurram with a turban jewel. Scene from the Badshah Nama, painted by the artist Payag. c.1640.

Fig. 9.7
Jahangir shooting the figure of poverty, painting by the artist Abu'l Hasan.

The artist has rendered the figure in a flesh shell to suggest that this is not a real person, but a human form used to symbolise an abstract quality. Such a mode of personification in art and literature is termed allegory. The Chain of Justice is shown descending from heaven.

This is how Jahangir described the Chain of Justice to his courtiers:

After my accession, the first order that I gave was for the fastening up of the Chain of Justice, so that if those charged by the administration of justice should delay or practise hypocrisy in the matter of those seeking justice, the oppressed might come to this chain and shake it so that its noise might attract attention. The chain was made of pure gold, 30 gaz in length and containing 60 bells.

☞ Identify and interpret the symbols in the painting. Summarise the message of the painting.

A number of symbols were created for visual representation of the idea of justice which came to stand for the highest virtue of Mughal monarchy. One of the favourite symbols used by artists was the motif of the lion and the lamb (or goat) peacefully nestling next to each other. This was meant to signify a realm where both the strong and the weak could exist in harmony. Court scenes from the illustrated *Badshah Nama* place such motifs in a niche directly below the emperor's throne (see Fig. 9.6).

🗨 Discuss...
Why was justice regarded as such an important virtue of monarchy in the Mughal Empire?

6. CAPITALS AND COURTS

6.1 Capital cities

The heart of the Mughal Empire was its capital city, where the court assembled. The capital cities of the Mughals frequently shifted during the sixteenth and seventeenth centuries. Babur took over the Lodi capital of Agra, though during the four years of his reign the court was frequently on the move. During the 1560s Akbar had the fort of Agra constructed with red sandstone quarried from the adjoining regions.

In the 1570s he decided to build a new capital, Fatehpur Sikri. One of the reasons prompting this may have been that Sikri was located on the direct road to Ajmer, where the dargah of Shaikh Muinuddin Chishti had become an important pilgrimage centre. The Mughal emperors entered into a close relationship with sufis of the Chishti silsila. Akbar commissioned the construction of a white marble tomb for Shaikh Salim Chishti next to the majestic Friday mosque at Sikri. The monumental arched gateway (Buland Darwaza) was meant to remind visitors of the Mughal victory in Gujarat. In 1585 the capital was transferred to Lahore to bring the north-west under greater control and Akbar closely watched the frontier for thirteen years.

Shah Jahan pursued sound fiscal policies and accumulated enough money to indulge his passion for building. Building activity in monarchical cultures, as you have seen in the case of earlier rulers, was the most visible and tangible sign of dynastic power, wealth and prestige. In the case of Muslim rulers it was also considered an act of piety.

In 1648 the court, army and household moved from Agra to the newly completed imperial capital, Shahjahanabad. It was a new addition to the old residential city of Delhi, with the Red Fort, the Jama Masjid, a tree-lined esplanade with

Fig. 6.6
The Buland Darwaza,
Fatehpur Sikri

bazaars (Chandni Chowk) and spacious homes for the nobility. Shah Jahan's new city was appropriate to a more formal vision of a grand monarchy.

6.2 The Mughal court

The physical arrangement of the court, focused on the sovereign, mirrored his status as the heart of society. Its centrepiece was therefore the throne, the *takht*, which gave physical form to the function of the sovereign as *axis mundi*. The canopy, a symbol of kingship in India for a millennium, was believed to separate the radiance of the sun from that of the sovereign.

Chronicles lay down with great precision the rules defining status amongst the Mughal elites. In court, status was determined by spatial proximity to the king. The place accorded to a courtier by the ruler was a sign of his importance in the eyes of the emperor. Once the emperor sat on the throne, no one was permitted to move from his position or to leave without permission. Social control in court society was exercised through carefully defining in

Axis mundi is a Latin phrase for the pole or axis that is considered as the support of the earth.

Source 2

Darbar-i Akbari

Abu'l Fazl gives a vivid account of Akbar's darbar:

Whenever His Majesty (Akbar) holds court (darbar) a large drum is beaten, the sounds of which are accompanied by Divine praise. In this manner, people of all classes receive notice. His Majesty's sons and grandchildren, the grandees of the Court, and all other men who have admittance attend to make the *kornish*, and remain standing in their proper places. Learned men of genius and skilful mechanics pay their respects; and the officers of justice present their reports. His Majesty, with his usual insight, gives orders, and settles everything in a satisfactory manner. During the whole time, skilful gladiators and wrestlers from all countries hold themselves in readiness, and singers, male and female, are in waiting. Clever jugglers and funny tumblers also are anxious to exhibit their dexterity and agility.

○ Describe the main activities taking place in the darbar.

Kornish was a form of ceremonial salutation in which the courtier placed the palm of his right hand against his forehead and bent his head downwards. This gesture suggested that the subject placed his head – the seat of the senses and the mind – into the hand of humility, presenting it to the royal assembly.

Chahar taslim is a mode of salutation which begins with placing the back of the right hand on the ground, and raising it gently till the person stands erect, when he puts the palm of his hand upon the crown of his head. It is done four (chahar) times. Taslim literally means submission.

Shab-i barat is the full moon night on the 14 Shaban, the eighth month of the hijri calendar and is celebrated with prayers and fireworks in the subcontinent. It is the night when the destinies of the Muslims for the coming year are said to be determined and also forgiven.

full detail the forms of address, courtesies and speech which were acceptable in court. The slightest infringement of etiquette was noticed and punished on the spot.

The forms of salutation to the ruler indicated the person's status in the hierarchy: deeper prostration represented higher status. The highest form of submission was sijda or complete prostration. Under Shah Jahan these rituals were replaced with chahar taslim and zaminbos (kissing the ground).

The protocols governing diplomatic envoys at the Mughal court were equally explicit. An ambassador presented to the Mughal emperor was expected to offer an acceptable form of greeting – either by bowing deeply or kissing the ground, or else to follow the Persian custom of clasping one's hands in front of the chest. Thomas Roe, the English envoy of James I, simply bowed before Jahangir according to European custom, and further shocked the court by demanding a chair.

The emperor began his day at sunrise with personal religious devotions or prayers, and then appeared on a small balcony, the jharoka, facing the east. Below, a crowd of people (soldiers, merchants, craftspersons, peasants, women with sick children) waited for a view, darshan, of the emperor. Jharoka darshan was introduced by Akbar with the objective of broadening the acceptance of the imperial authority as part of popular faith.

The jewelled throne

This is how Shah Jahan's jewelled throne (takht-i murassa) in the hall of public audience in the Agra palace is described in the Badshah Nama:

This gorgeous structure has a canopy supported by twelve jcwel-studded pillars and measures five cubits in height from the flight of steps to the overhanging dome. On His Majesty's coronation, he had commanded that 86 lakh worth of gems and precious stones, and one lakh tola of gold, worth another 14 lakh, should be used in decorating it. ... The throne was completed in the course of seven years, and among the precious stones used upon it was a ruby worth one lakh of rupees that Shah Abbas Safavi had sent to the late emperor Jahangir. And on this ruby were inscribed the names of the great emperors Timur Sahib-i qiran, Mirza Shahrukh, Mirza Ulugh Beg, and Shah Abbas, as well as the names of the emperors Akbar, Jahangir, and that of His Majesty himself.

Fig. 9.10
Prince Khurram being weighed in precious metals in a ceremony called jashn-i wazn *or* tula dan *(from Jahangir's memoirs)*

After spending an hour at the jharoka, the emperor walked to the public hall of audience (diwan-i am) to conduct the primary business of his government. State officials presented reports and made requests. Two hours later, the emperor was in the diwan-i khas to hold private audiences and discuss confidential matters. High ministers of state placed their petitions before him and tax officials presented their accounts. Occasionally, the emperor viewed the works of highly reputed artists or building plans of architects (*mimar*).

On special occasions such as the anniversary of accession to the throne, Id, Shab-i barat and Holi, the court was full of life. Perfumed candles set in rich holders and palace walls festooned with colourful hangings made a tremendous impression on visitors. The Mughal kings celebrated three major

Fig. 9.11a

Dara Shukoh's wedding

Weddings were celebrated lavishly in the imperial household. In 1633 the wedding of Dara Shukoh and Nadira, the daughter of Prince Parwiz, was arranged by Princess Jahanara and Sati un-Nisa Khanam, the chief maid of the late empress, Mumtaz Mahal. An exhibition of the wedding gifts was arranged in the *dīwān-i ‘amm*. In the afternoon the emperor and the ladies of the harem paid a visit to it, and in the evening nobles were allowed access. The bride's mother similarly arranged her presents in the same hall and *khās-khāna* went to see them. The *hinabandi* (application of henna dye) ceremony was performed in the *dīwān-i khās*. Betel leaf (*paan*), cardamom and dry fruit were distributed among the attendants of the court.

The total cost of the wedding was Rs 32 lakh, of which Rs six lakh was contributed by the imperial treasury, Rs 16 lakh by Jahanara (including the amount earlier set aside by Mumtaz Mahal) and the rest by the bride's mother. These paintings from the *Dārābnāma* depict some of the activities associated with the occasion.

festivals a year: the solar and lunar birthdays of the monarch and Nauroz, the Iranian New Year on the vernal equinox. On his birthdays, the monarch was weighed against various commodities which were then distributed in charity.

6.5 Titles and gifts

Grand titles were adopted by the Mughal emperors at the time of coronation or after a victory over an enemy. High-sounding and rhythmic, they created an atmosphere of awe in the audience when announced by ushers (naqib). Mughal coins carried the full title of the reigning emperor with regal pictorial.

The granting of titles to men of merit was an important aspect of Mughal polity. A man's ascent in the court hierarchy could be traced through the titles he held. The title Asaf Khan for one of the highest ministers originated with Asaf, the legendary minister of the prophet king Sulaiman (Solomon). The title Mirza Raja was accorded by Aurangzeb to his two highest-ranking nobles, Jai Singh and Jaswant Singh. Titles could be earned or paid for. Mir Khan offered Rs one lakh to Aurangzeb for the letter alif, that is A, to be added to his name to make it Amir Khan.

Other awards included the robe of honour (khilat), a garment once worn by the emperor and imbued with his benediction. One gift, the sarapa ("head to foot"), consisted of a tunic, a turban and a sash (patka). Jewelled ornaments were often given as gifts by the emperor. The lotus blossom set with jewels (padma murassa) was given only in exceptional circumstances.

A courtier never approached the emperor empty-handed: he offered either a small sum of money (nazr) or a large amount (peshkash). In diplomatic relations, gifts were regarded as a sign of honour and respect. Ambassadors performed the important function of negotiating treaties and relationships between competing political powers. In such a context gifts had an important symbolic role. Thomas Roe was disappointed when a ring he had presented to Asaf Khan was returned to him for the reason that it was worth merely 400 rupees.

7. THE IMPERIAL HOUSEHOLD

The term "harem" is frequently used to refer to the domestic world of the Mughals. It originates in the Persian word *haram*, meaning a sacred place. The Mughal household consisted of the emperor's wives and concubines, his near and distant relatives (mother, step- and foster-mothers, sisters, daughters, daughters-in-law, aunts, children, etc.), and female servants and slaves. Polygamy was practised widely in the Indian subcontinent, especially among the ruling groups.

Both for the Rajput clans as well as the Mughals, marriage was a way of cementing political relationships and forging alliances. The gift of territory was often accompanied by the gift of a daughter in marriage. This ensured a continuing hierarchical relationship between ruling groups. It was through the link of marriage and the relationships that developed as a result that the Mughals were able to form a vast kinship network that linked them to important groups and helped to hold a vast empire together.

In the Mughal household a distinction was maintained between wives who came from royal families (*begams*), and other wives (*aghas*) who were not of noble birth. The begams, married after receiving huge amounts of cash and valuables as dower (*mahr*), naturally received a higher status and greater attention from their husbands than did aghas. The concubines (*aghacha*) of the lower aghas occupied the lowest position in the hierarchy of females intimately related to royalty. They all received monthly allowances in cash, supplemented with gifts according to their status. The lineage-based family structure was not entirely stable. The aghas and the aghachas could rise to the position of a begam depending on the husband's will, and provided that he did not already have four wives. Love and motherhood played important roles in elevating such women to the status of legally wedded wives.

Apart from wives, numerous male and female slaves populated the Mughal household. The tasks they performed varied from the most mundane to those requiring skill, tact and intelligence. Slave eunuchs (*khwajasara*) moved between the external and

Fig. 9.13
Part of the inner apartments in Fatehpur Sikri

internal life of the household as guards, servants, and also as agents for women dabbling in commerce.

After Nur Jahan, Mughal queens and princesses began to control significant financial resources. Shah Jahan's daughters Jahanara and Roshanara enjoyed an annual income often equal to that of high imperial mansabdars. Jahanara, in addition, received revenues from the port city of Surat, which was a lucrative centre of overseas trade.

Control over resources enabled important women of the Mughal household to commission buildings and gardens. Jahanara participated in many architectural projects of Shah Jahan's new capital, Shahjahanabad (Delhi). Among these was an imposing double-storeyed caravanserai with a courtyard and garden. The bazaar of Chandni Chowk, the throbbing centre of Shahjahanabad, was designed by Jahanara.

An interesting book giving us a glimpse into the domestic world of the Mughals is the *Humayun Nama* written by Gulbadan Begum. Gulbadan was the daughter of Babur, Humayun's sister and Akbar's aunt. Gulbadan could write fluently in Turkish and Persian. When Akbar commissioned Abu'l Fazl to write a history of his reign, he requested his aunt to record her memoirs of earlier times under Babur and Humayun, for Abu'l Fazl to draw upon.

What Gulbadan wrote was no eulogy of the Mughal emperors. Rather she described in great detail the conflicts and tensions among the princes and kings and the important mediating role elderly women of the family played in resolving some of these conflicts.

8. THE IMPERIAL OFFICIALS

8.1 Recruitment and rank

Mughal chronicles, especially the Akbar Nama, have bequeathed a vision of empire in which agency rests almost solely with the emperor, while the rest of the kingdom has been portrayed as following his orders. Yet if we look more closely at the rich information these histories provide about the apparatus of the Mughal state, we may be able to understand the ways in which the imperial organisation was dependent on several different institutions to be able to function effectively. One important pillar of the Mughal state was its corps of officers, also referred to by historians collectively as the nobility.

The nobility was recruited from diverse ethnic and religious groups. This ensured that no faction was large enough to challenge the authority of the state. The officer corps of the Mughals was described as a bouquet of flowers (guldasta) held together by loyalty to the emperor. In Akbar's imperial service, Turani and Iranian nobles were present from the earliest phase of carving out a political dominion. Many had accompanied Humayun; others migrated later to the Mughal court.

The Mughal nobility

This is how Chandrabhan Brahman described the Mughal nobility in his book Car Chaman (Four Gardens), written during the reign of Shah Jahan.

People from many races (Arabs, Iranians, Turks, Tajiks, Kurds, Tatars, Russians, Abyssinians, and so on) and from many countries (Turkey, Egypt, Syria, Iraq, Arabia, Iran, Khurasan, Turan) – in fact, different groups and classes of people from all societies – here sought refuge in the imperial court, as well as different groups from India, men with knowledge and skills as well as warriors, for example Brahmans and Shaikhzadas. Sayyids of genuine lineage, Shaikhzadas with noble ancestry, Afghan tribes such as the Lodis, Rohillas, Yusufzai, and castes of Rajputs who were to be addressed as rana, raja, rao and rayan – i.e. Rathor, Purohit, Kachhwaha, Hada, Gaur, Chauhan, Panwar, Bhadauriya, Solanki, Bundela, Shekhawat, and all the other Indian tribes such as Ghakkar, Khokar, Baluchi, and others who wielded the sword, and mansabs from 100 to 7000 zat, likewise landowners from the steppes and mountains, from the regions of Karnataka, Bengal, Assam, Udaipur, Srinagar, Kumaon, Tibet and Kishtwar and so on – whole tribes and groups of these have been privileged to kiss the threshold of the imperial court (i.e. attend the court or find employment).

Two ruling groups of Indian origin entered the imperial service from 1560 onwards: the Rajputs and the Indian Muslims (Shaikhzadas). The first to join was a Rajput chief, Raja Bharmal Kachhwaha of Amber, to whose daughter Akbar got married. Members of Hindu castes inclined towards education and accountancy were also promoted, a famous example being Akbar's finance minister, Raja Todar Mal, who belonged to the Khatri caste.

Iranians gained high offices under Jahangir, whose politically influential queen, Nur Jahan (d. 1645), was an Iranian. Aurangzeb appointed Rajputs to high positions, and under him the Marathas accounted for a sizeable number within the body of officers.

All holders of government offices held ranks (mansabs) comprising two numerical designations: zat which was an indicator of position in the imperial hierarchy and the salary of the official (mansabdar), and sawar which indicated the number of horsemen he was required to maintain in service. In the seventeenth century, mansabdars of 1,000 zat or above ranked as nobles (umara, which is the plural of amir).

The nobles participated in military campaigns with their armies and also served as officers of the empire in the provinces. Each military commander recruited, equipped and trained the main striking arm of the Mughal army, the cavalry. The troopers maintained superior horses branded on the flank by the imperial mark (dagh). The emperor personally reviewed changes in rank, titles and official postings for all except the lowest-ranked officers. Akbar, who designed the mansab system, also established spiritual relationships with a select band of his nobility by treating them as his disciples (murid).

For members of the nobility, imperial service was a way of acquiring power, wealth and the highest possible reputation. A person wishing to join the service petitioned through a noble, who presented a tajwiz to the emperor. If the applicant was found suitable a mansab was granted to him. The mir bakhshi (paymaster general) stood in open court on the right of the emperor and presented all candidates for appointment or promotion, while his office prepared orders bearing his seal and signature as well as those of the emperor. There were two other important ministers at the centre: the diwan-i ala

Nobles at court

The Jesuit priest Father Antonio Monserrate, resident at the court of Akbar, noticed:

In order to prevent the great nobles becoming insolent through the unchallenged enjoyment of power, the king summons them to court and gives them imperial commands, as though they were his slaves. The obedience to these commands ill suits their exalted rank and dignity.

❓ What does Father Monserrate's observation suggest about the relationship between the Mughal emperor and his officials?

Tajwiz was a petition presented by a nobleman to the emperor, recommending that an applicant be recruited as a mansabdar.

finance minister) and *sadr* or *sadr* (minister of grants or *madad-i maash*, and in charge of appointing local judges or *qazis*). The three ministers occasionally came together as an advisory body, but were independent of each other. Akbar with these and other advisers shaped the administrative, fiscal and monetary institutions of the empire.

Nobles stationed at the court (*tainat-i rakab*) were a reserve force to be deputed to a province or military campaign. They were duty-bound to appear twice daily, morning and evening, to express submission to the emperor in the public audience hall. They shared the responsibility for guarding the emperor and his household round the clock.

8.2 Information and empire

The keeping of exact and detailed records was a major concern of the Mughal administration. The *mir bakhshi* supervised the corps of court writers (*waqia navis*) who recorded all applications and documents presented to the court, and all imperial orders (*farman*). In addition, agents (*wakil*) of nobles and regional rulers recorded the entire proceedings of the court under the heading "News from the Exalted Court" (*Akhbarat-i Darbar-i Mu'alla*) with the date and time of the court session (*pahar*). The *akhbarat* contained all kinds of information such as attendance at the court, grant of offices and titles, diplomatic missions, presents received, or the enquiries made by the emperor about the health of an officer. This information is valuable for writing the history of the public and private lives of kings and nobles.

News reports and important official documents travelled across the length and breadth of the regions under Mughal rule by imperial post. Round-the-clock relays of foot-runners (*qasid* or *pattamar*) carried papers rolled up in bamboo containers. The emperor received reports from even distant provincial capitals within a few days. Agents of nobles posted outside the capital and Rajput princes and tributary rulers all assiduously copied these announcements and sent their contents by messenger back to their masters. The empire was connected by a surprisingly rapid information loop for public news.

9.5 Beyond the centre: provincial administration

The division of functions established at the centre was replicated in the provinces (subas) where the ministers had their corresponding subordinates (diwan, bakhshi and sadr). The head of the provincial administration was the governor (subadar) who reported directly to the emperor.

The sarkars, into which each suba was divided, often overlapped with the jurisdiction of faujdars (commandants) who were deployed with contingents of heavy cavalry and musketeers in districts. The local administration was looked after at the level of the pargana (sub-district) by three semi-hereditary officers, the qanungo (keeper of revenue records), the chaudhuri (in charge of revenue collection) and the qazi.

Each department of administration maintained a large support staff of clerks, accountants, auditors, messengers, and other functionaries who were technically qualified officials, functioning in accordance with standardised rules and procedures, and generating copious written orders and records. Persian was made the language of administration throughout, but local languages were used for village accounts.

The Mughal chroniclers usually portrayed the emperor and his court as controlling the entire administrative apparatus down to the village level. Yet, as you have seen (Chapter 8), this could hardly have been a process free of tension. The relationship between local landed magnates, the zamindars, and the representatives of the Mughal emperor was sometimes marked by conflicts over authority and a share of the resources. The zamindars often succeeded in mobilising peasant support against the state.

↻ Discuss...

Read Section 2, Chapter 8 once more and discuss the extent to which the emperor's presence may have been felt in villages.

9. BEYOND THE FRONTIERS

Writers of chronicles list many high-sounding titles assumed by the Mughal emperors. These included general titles such as Shahenshah (King of Kings) or specific titles assumed by individual kings upon ascending the throne, such as Jahangir (World-Seizer) or Shah Jahan (King of the World). The chroniclers often drew on these titles and their meanings to reiterate the claims of the Mughal emperors to uncontested territorial and political control. Yet the same contemporary histories provide accounts of diplomatic relationships and conflicts with neighbouring political powers. These reflect some tension and political rivalry arising from competing regional interests.

Fig. 9.15
The siege of Qandahar

9.1 The Safavids and Qandahar

The political and diplomatic relations between the Mughal kings and the neighbouring countries of Iran and Turan hinged on the control of the frontier defined by the Hindukush mountains that separated Afghanistan from the regions of Iran and Central Asia. All conquerors who sought to make their way into the Indian subcontinent had to cross the Hindukush to have access to north India. A constant aim of Mughal policy was to ward off this potential danger by controlling strategic outposts – notably Kabul and Qandahar.

Qandahar was a bone of contention between the Safavids and the Mughals. The fortress-town had initially been in the possession of

Fig. 146
Jahangir's dream

An inscription in the miniature reveals that Jahangir commissioned Abu'l Hasan to render in painting a dream the emperor had had recently. Abu'l Hasan painted the scene portraying the two rulers – Jahangir and the Safavid Shah Abbas – in friendly embrace. Both kings are depicted in their traditional costumes. The figure of the Shah is based upon portraits made by painters who accompanied the Mughal embassy to Iran in 1613. This gave a sense of authenticity to a scene which is fictional, as the two rulers had never met.

> Look at the painting carefully. How is the relationship between Jahangir and Shah Abbas shown? Compare their physique and postures. What do the animals stand for? What does the map suggest?

Humayun, recaptured in 1595 by Akbar. While the Safavid court retained diplomatic relations with the Mughals, it continued to stake claims to Qandahar. In 1613 Jahangir sent a diplomatic envoy to the court of Shah Abbas to plead the Mughal case for retaining Qandahar, but the mission failed. In the winter of 1622 a Persian army besieged Qandahar. The ill-prepared Mughal garrison was defeated and had to surrender the fortress and the city to the Safavids.

9.2 The Ottomans: pilgrimage and trade

The relationship between the Mughals and the Ottomans was marked by the concern to ensure free movement for merchants and pilgrims in the territories under Ottoman control. This was especially true for the Hijaz, that part of Ottoman Arabia where the important pilgrim centres of Mecca and Medina were located. The Mughal emperor usually combined religion and commerce by exporting valuable merchandise to Aden and Mokha, both Red Sea ports, and distributing the proceeds

of the sales in charity to the keepers of shrines and religious men there. However, when Aurangzeb discovered cases of misappropriation of funds sent to Arabia, he favoured their distribution in India which, he thought, "was as much a house of God as Mecca".

9.3 Jesuits at the Mughal court

Europe received knowledge of India through the accounts of Jesuit missionaries, travellers, merchants and diplomats. The Jesuit accounts are the earliest impressions of the Mughal court ever recorded by European writers.

Following the discovery of a direct sea route to India at the end of the fifteenth century, Portuguese merchants established a network of trading stations in coastal cities. The Portuguese king was also interested in the propagation of Christianity with the help of the missionaries of the Society of Jesus (the Jesuits). The Christian missions to India during the sixteenth century were part of this process of trade and empire building.

Akbar was curious about Christianity and dispatched an embassy to Goa to invite Jesuit priests. The first Jesuit mission reached the Mughal court at Fatehpur Sikri in 1580 and stayed for about two years. The Jesuits spoke to Akbar about Christianity and debated its virtues with the ulama. Two more missions were sent to the Mughal court at Lahore, in 1591 and 1595.

The Jesuit accounts are based on personal observation and shed light on the character and mind of the emperor. At public assemblies the Jesuits were assigned places in close proximity to Akbar's throne. They accompanied him on his campaigns, tutored his children, and were often companions of his leisure hours. The Jesuit accounts corroborate the information given in Persian chronicles about state officials and the general conditions of life in Mughal times.

Source 4

The accessible emperor

In the account of his experiences, Monserrate, who was a member of the first Jesuit mission, says:

It is hard to exaggerate how accessible (Akbar) makes himself to all who wish audience of him. For he creates an opportunity almost every day for any of the common people or of the nobles to see him and to converse with him, and he endeavours to show himself pleasant-spoken and affable rather than severe towards all who come to speak with him. It is very remarkable how great an effect this courtesy and affability has in attaching him to the minds of his subjects.

➔ Discuss...

What were the considerations that shaped the relations of the Mughal rulers with their contemporaries?

10. QUESTIONING FORMAL RELIGION

The high respect shown by Akbar towards the members of the Jesuit mission impressed them deeply. They interpreted the emperor's open interest in the doctrines of Christianity as a sign of his acceptance of their faith. This can be understood in the light of the prevailing climate of religious intolerance in Western Europe. Monserrate remarked that "the king cared little that in allowing everyone to follow his religion he was in reality violating all".

Akbar's quest for religious knowledge led to interfaith debates in the Ibadat Khana at Fatehpur Sikri between learned Muslims, Hindus, Jainas, Parsis and Christians. Akbar's religious views matured as he queried scholars of different religions and sects and gathered knowledge about their doctrines. Increasingly, he moved away from the orthodox Islamic ways of understanding religions towards a self-conceived eclectic form of divine worship focused on light and the sun. We have seen that Akbar and Abu'l Fazl created a philosophy of light and used it to shape the image of the king and ideology of the state. In this, a divinely inspired individual has supreme sovereignty over his people and complete control over his enemies.

Fig. 9.13

Hom in the harem

This is an excerpt from Abd'ul Qadir Badauni's Muntakhab-ut Tawarikh. A theologian and a courtier, Badauni was critical of his employer's policies and did not wish to make the contents of his book public.

From early youth, in compliment to his wives, the daughters of Rajas of Hind, His Majesty had been performing hom in the harem, which is a ceremony derived from fire-worship (aish parasti). But on the New Year of the twenty-fifth regnal year (1580) he prostrated publicly before the sun and the fire. In the evening the whole Court had to rise up respectfully when the lamps and candles were lighted.

These ideas were in harmony with the perspective of the court chroniclers who give us a sense of the processes by which the Mughal rulers could effectively assimilate such a heterogeneous populace within an imperial edifice. The name of the dynasty continued to enjoy legitimacy in the subcontinent for a century and a half, even after its geopolitical extent and the political control it exercised had diminished considerably.

TIMELINE

SOME MAJOR MUGHAL CHRONICLES AND MEMOIRS

c. 1530	Manuscript of Babur's memoirs in Turkish – saved from a storm – becomes part of the family collection of the Timurids
c. 1587	Gulbadan Begum begins to write the *Humayun Nama*
1589	Babur's memoirs translated into Persian as *Babur Nama*
1589-1602	Abu'l Fazl works on the *Akbar Nama*
1605-22	Jahangir writes his memoirs, the *Jahangir Nama*
1639-47	Lahori composes the first two daftars of the *Badshah Nama*
c. 1650	Muhammad Waris begins to chronicle the third decade of Shah Jahan's reign
1668	*Alamgir Nama*, a history of the first ten years of Aurangzeb's reign compiled by Muhammad Kazim

ANSWER IN 100-150 WORDS

1. Describe the process of manuscript production in the Mughal court.

2. In what ways would the daily routine and special festivities associated with the Mughal court have conveyed a sense of the power of the emperor?

3. Assess the role played by women of the imperial household in the Mughal Empire.

4. What were the concerns that shaped Mughal policies and attitudes towards regions outside the subcontinent?

5. Discuss the major features of Mughal provincial administration. How did the centre control the provinces?

WRITE A SHORT ESSAY (ABOUT 250-300 WORDS) ON THE FOLLOWING:

6. Discuss, with examples, the distinctive features of Mughal chronicles.

7. To what extent do you think the visual material presented in this chapter corresponds with Abu'l Fazl's description of the *Imperial* Court II?

8. What were the distinctive features of the Mughal nobility? How was their relationship with the emperor shaped?

9. Identify the elements that went into the making of the Mughal ideal of kingship.
